Alison Wolfe

The development of P.C.B fluid used in electric transformers was a great event leading to reliable electricity through out the land. At the factory cities - 2 cons in every gorge and kids in college.

Now at clean up time seems only right that the expense be shared by companies involved and our government. The Woods pond dam area should be drained and soil cleaned up, after which the dam no longer serving its a original grant purposes, should be removed restoring the farm land and returning the river to the stream conditions before dam was installed!
