Post-Test: “Future Water Guardians of NH” Presentation

We hope that you enjoyed the presentation that you saw a few days ago. We would greatly appreciate it if you could complete this questionnaire for us and return it to your teacher.

These questions will not be graded by your teacher (your teacher is being asked to take the same test). Your answers do not count towards your grade in this class!

1. A watershed is (circle the correct answer):
 - a. An area underground that supplies drinking water to us.
 - b. The sloping land area from which water drains into a stream, river, lake or other body of water.
 - c. A small building used to protect a town’s drinking water supply.
2. Name two things that can pollute groundwater.
3. Give an example of waste run-off (Nonpoint Source Pollution).
4. Where does the drinking water for your school come from?

Please label the following statements True (T) or False (F) or Don’t Know (D):

5. _____ In **New Hampshire**, the drinking water that flows out of most people’s faucets comes from groundwater.
6. _____ Groundwater moves and contributes to aquifers that supply our wells.
7. _____ When water filters down through the soil and enters the groundwater it is called recharge.
8. _____ The water that we see in a lake or river is separate from groundwater and the two never mix.
9. _____ In New Hampshire, most of our water pollution comes from many kinds of waste run-off: Nonpoint Source Pollution, not pipes that drain from factories and wastewater treatment plants: Point Source Pollution.
