

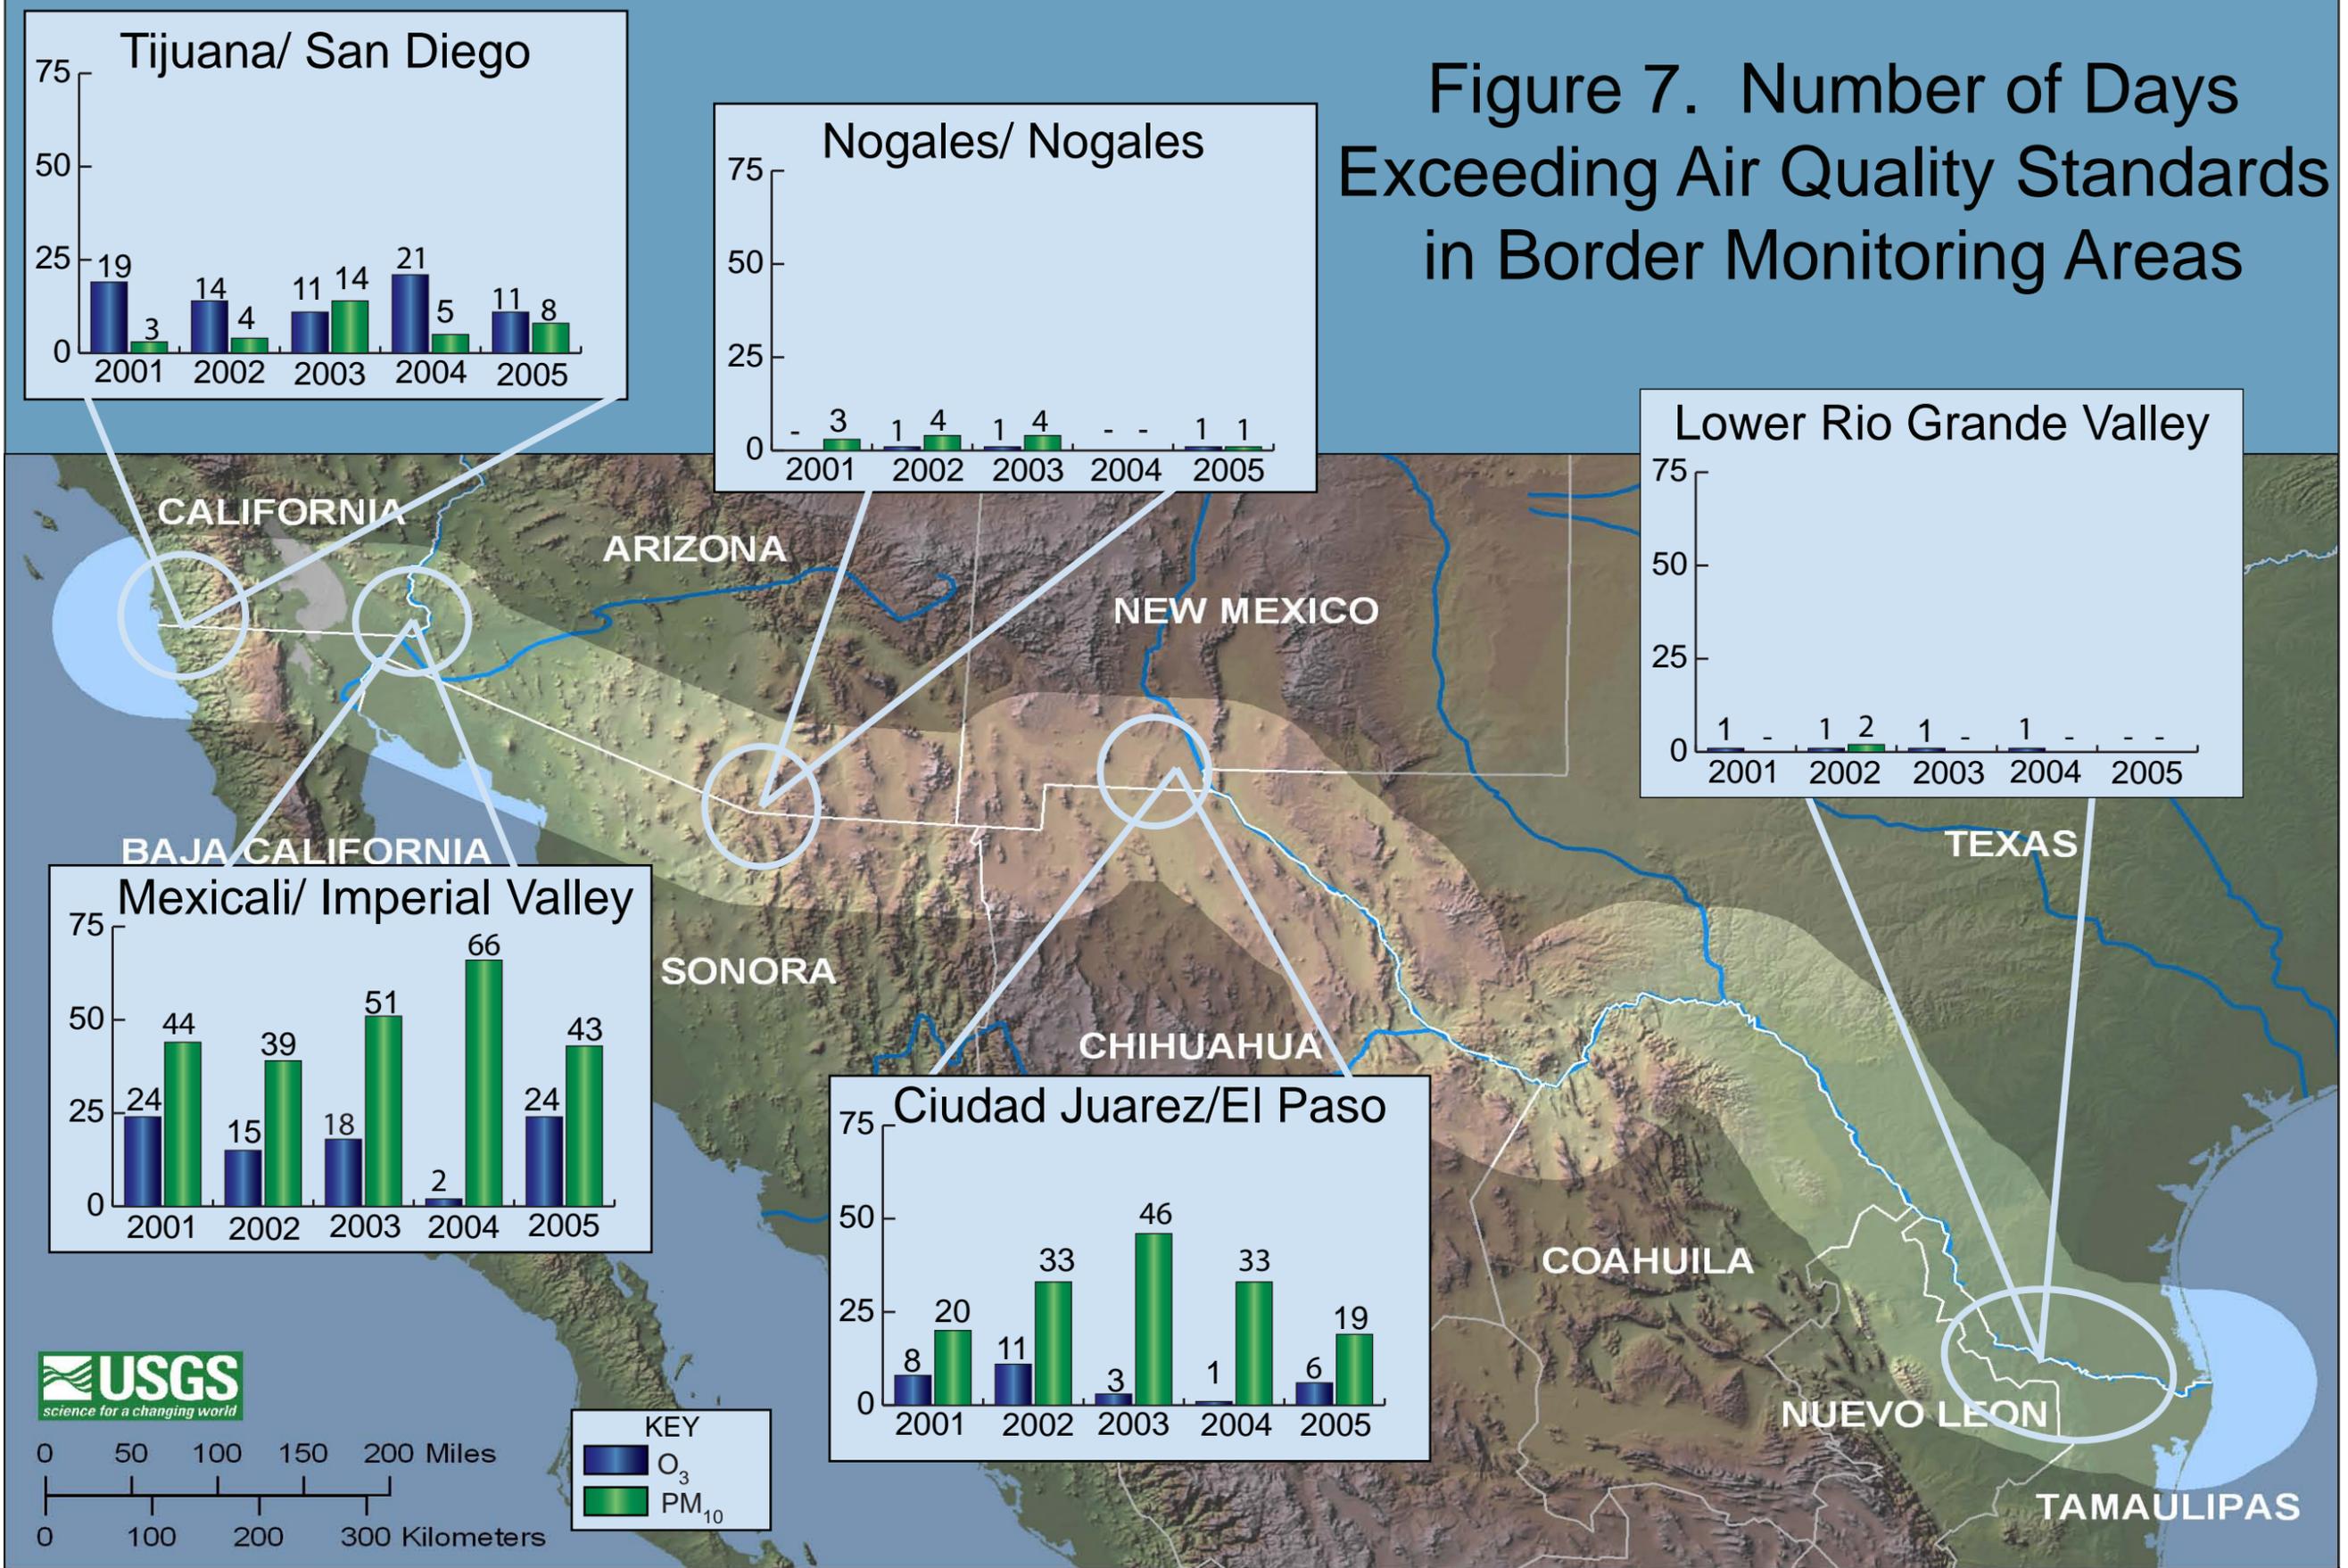

# Figure 7. Number of Days Exceeding Air Quality Standards in Border Monitoring Areas

Source: U.S. EPA Air Quality System (AQS) Database. The U.S. and Mexico have the same ozone standard but different PM<sub>10</sub>-24 hour average standard. The number of days any one monitor exceeded the air quality standards is based on the binational 8-hour standard for ozone (0.08 ppm) and the 24-hour U.S. standard for PM<sub>10</sub> (150 ug/m<sup>3</sup>). "-" indicates no exceedance or 'was not measured'.
