## **Environmental Management Policy**

It is the New England Regional Laboratory's (NERL) policy to integrate environmental stewardship into all of our operations within our defined fenceline. We will manage our organizations and our programs in a manner that protects the environment, the safety of our employees, and public health.

In support of this policy, the managers and staff of NERL commit to:

- Comply fully with the letter and spirit of all applicable Federal, State, local environmental laws, Federal Executive Orders, and applicable policies.
- Work continuously to improve the effectiveness of our environmental management.
- Continue to prevent pollution before it is produced, reduce the amount of waste at our facility, and re-use and recycle whenever possible.
- Provide appropriate environmental training and educate employees to be environmentally responsible on the job.
- Work to continuously improve our environmental performance by establishing and periodically reviewing our environmental performance goals, and monitor our environmental performance regularly through rigorous evaluations.
- Evaluate environmental factors and the full acquisition, use and disposal costs when making planning, purchasing, and operating decisions.
- Use energy efficiently throughout our operations, and support the efficient use of gas and electricity in our facility.
- Share information on our Environmental Policy and performance with the public and work cooperatively with the local community and other stakeholders to further common environmental objectives.
- Communicate and reinforce this policy throughout our organization.
- Revisit the Policy and Environmental Management System during the Management Review to make any necessary revisions due to operation changes or environmental improvements.
