

Verify Alternate Procedures

Alternative procedures currently in place for Verify modules.

Motorcycle (MC)/All Terrain Vehicles (ATV)

The "Upload Batch Data Set" option for the MC/ATV module is not available. Individual certification files must be uploaded.

Non-Road Compression Ignition (NRCI)

The system currently requires that answers be provided for Ambient Operating Region (216), Not-To-Exceed Determination Description (26), Engine Incapable Operating Region Indicator (244), Time-Weighted Carve-Out Limited Testing Region Indicator (22), and NTE Deficiency Indicator (23) on the General Information tab even though they do not apply to all engine families.

If these data elements do not apply to the subject engine family the user should indicate "No" for all five of these data elements and make a note that this has been done in the Engine Family Comments (24).
