

**October 2009 Fact Sheet Revision  
for the  
BIA Pueblo Pintado Boarding School Wastewater Treatment Lagoons  
Final NPDES Permit No. NN0020991**

EPA has made the following clarification to the August 2009 permit fact sheet with regards to ammonia. (Paragraph V.G, page 4)

**V. Determination of Effluent Limitations, Monitoring, and Reporting Requirements**

**G. Total Ammonia**

Due to the low flow volume and intermittent nature of the discharge and since the facility had not experienced any discharge in many years, and because the new Navajo Nation SWQS for ammonia is variable depending on temperature and pH, making it impractical for intermittent monitoring, the ammonia monitoring requirement has been deleted.
