

ASHLAND/NSP LAKEFRONT SITE
JANUARY 15, 2010 PROGRESS REPORT (No. 67)
WDNR BRRTS #02-02-00013
CERCLA Docket No. V-W-04-C-764
USEPA ID# WISFN057952

This is the sixty-seventh progress report prepared in accordance with the Administrative Order on Consent (AOC) for the Ashland/NSP Lakefront Site, effective November 14, 2003. This report covers activities completed during October 2009 – December 2009. It is intended to meet the requirements described in Task 8 of the Statement of Work appended to the AOC.

Field Activities Completed

Free-Product Recovery System

The free-product recovery system operated between September 30 and December 30, 2009, but two automatic shutdowns were measured on October 7th and December 22nd. Both were caused by air supply interruptions. The October 7th shutdown was the result of an inadvertent valve closure at the air compressor housed in the NSPW service center. The valve was reopened on that date and operation resumed. The December 22nd shutdown was caused by failure of the compressor. Personnel were mobilized to the site on December 23rd, the compressor was repaired and the system restarted.

In addition, system operation was affected by periodic shutdowns of the extraction pump at EW-3. Two shutdowns at this pump were measured on October 21st and November 19th. Additionally, the pump appeared to operate intermittently on December 9th and 15th. Each of these observations occurred after the onset of freezing conditions. Additional insulation was added to the well vault during these measurements; a 15-watt light bulb was also installed at the vault on December 30th.

Between September 30th and December 30th 167.1 gallons of product were recovered. This translates to a rate of 1.8 gal/day. This is a decline from the rate of 3+ gal/day measured during the previous three months (July – September), but the recovery was not constant. During this period weekly recoveries varied from 8 – 24 gal/wk. These variations were caused by a combination of effects including the pump operation at EW-3 as well as seasonal changes in precipitation.

During this latest three month period 44,100 gallons of effluent were treated and discharged to the sanitary sewer. This volume corresponds to an average discharge of 3,392 gallons per week. This rate is slightly higher than the 2,690 gal/wk measured during the previous three month period, but less than the average weekly rate of 5,500 gal/wk measured since the system began operation in February 2001. Additionally, flow from EW-4 stabilized compared to the previous three month period as result of repair to the flow meter in late September. Flow from this well peaked in late October at 3,238 gal/wk, but declined to 1,034 gal/wk in late December, likely from seasonal effects on the water table aquifer.

Monthly water quality data to monitor system efficiency was collected for total VOC (primarily BTEX) values on October 12th, November 10th and December 3rd. Quarterly PAH and oil/grease values were also collected during the December event. VOC influent values for the three events were 52,110, 53,970 and 66,670 µg/l, respectively. The corresponding effluent values for these

USEPA ID# WISFN057952

events were 2.30, 22 and .33 µg/l, respectively.¹ PAH values measured during December yielded 0.028 µg/l, compared to a maximum limit () of 1,000 µg/l, per the Ashland POTW. Only a trace of oil/grease was detected (1.7J µg/l; “J” values indicate a concentration below the quantitation limit, but above the detection limit).

The summary of system monitoring data during this three month period is included in Tables 1 – 9. Lab analysis reports for the system monitoring samples are included in the Appendix.

RI Activities

All RI field activities were completed during November 2005.

SITE Program Activities

The SITE injection program was completed on February 2, 2007 and all equipment demobilized from the Ashland site the week of February 5, 2007.

Supplementary Groundwater Sampling

Two rounds of additional groundwater sampling were performed at the request of USEPA and WDNR in August 2008 and April 2009. The unvalidated results of these supplementary RI sampling events were included in the October 2008 (Progress Report No. 59) and July 2009 (Progress Report No. 65) reports.

Reporting Activities Completed

Final RI Report

USEPA provided a formal RI Report approval letter to NSPW on February 5, 2008.

Final Feasibility Study (FS)

USEPA issued formal approval of the FS report, which included the three previous Technical Memoranda (Remedial Action Options Tech Memo, Alternatives Screening Tech Memo, and the Comparative Analysis of Alternatives Tech Memo) along with the Treatability Study Reports, on December 4, 2008.

Preliminary Remedial Action Plan (PRAP)

USEPA issued the formal PRAP outlining its preferred remedies for soil, groundwater and sediments at the Lakefront Site on June 12, 2009. The Agency held a public informational meeting describing these remedies in Ashland on June 17, 2009, followed by a public hearing accepting

¹ The precarbon (intermediate) sample collected during the November event was 3.2 µg/l; it is suspected the precarbon and effluent samples were mislabeled.

formal verbal comments to the PRAP in Ashland on June 29, 2009. USEPA accepted written comments until August 17th.

Record of Decision

USEPA's Record of Decision (ROD) for the site is pending as of the date of this progress report.

Field Activities Planned

Coleman Engineering will continue to monitor the free-product removal system and evaluate system operations during the next reporting period from January – April 2010.

Reporting Activities Planned

The next progress report is scheduled for submittal on April 15, 2010. Future progress reports will continue to be submitted on the 15th of the month following completion of the calendar year quarter, until NSPW receives formal notice of AOC completion.

¹ Increase in free product removal w/ no change in groundwater removal volume due to free product collection tank and wash tank being pumped out and shipped to WRR in Eau Claire, WI. Total volume of 1324 gallons, w/ a current estimate of 85% free product in that volume.

² Correction of revised quantity of free product removed on 4/23/2003 of -211.9 gallons due to settling of emulsified free product measured on this date.

- (1) Total Elapsed Time, in days, only for days of remediation system operation, not days since start-up.
- (2) When a below detection result occurs, the assumed value is half of the detection limit.
For the 1/19/01 sampling, the samples were incorrectly labeled: Drum #1 is influent to Drum #1, Drum #2 is influent to Drum #2, and Air Stripper is Air Effluent.
- (3) Daily emission rate based on laboratory results.
- (4) Emission rate to date calculated from average daily emission rate and total days of remediation system operation.

- (1) Total Elapsed Time, in days, only for days of remediation system operation, not days since start-up.
- (2) When a below detection result occurs, the assumed value is half of the detection limit.
- (3) Removal based on Influent vs. Effluent
- (4) Emission rate to date calculated from average concentrations in effluent and total days of remediation system operation.
- (5) This sample was collected at the oil-water separator discharge, prior to the air diffuser.
- (6) This sample was collected at the inlet to the liquid phase carbon.

Values in brackets represent results greater than or equal to the LOD but less than the LOQ and are within a region of "Less-Certain Quantitation". Results greater than or equal to the LOQ are considered to be in the region of "Certain Quantitation". LOD and/or LOQ tagged with an asterisk(*) are considered Reporting Limits. All LOD/LOQs adjusted to reflect dilution.

LOD = Limit of Detection LOQ = Limit of Quantitation ND = Not Detected (< LOD) 1000 ug/L = 1 mg/L
 DWB = Dry Weight Basis NA = Not Applicable %DWB = (mg/kg DWB) / 10000
 MCL = Maximum Contaminant Levels for Drinking Water Samples. Shaded results indicate >MCL.

Values in brackets represent results greater than or equal to the LOD but less than the LOQ and are within a region of "Less-Certain Quantitation". Results greater than or equal to the LOQ are considered to be in the region of "Certain Quantitation". LOD and/or LOQ tagged with an asterisk(*) are considered Reporting Limits. All LOD/LOQs adjusted to reflect dilution.

LOD = Limit of Detection LOQ = Limit of Quantitation ND = Not Detected (< LOD) 1000 ug/L = 1 mg/L
 DWB = Dry Weight Basis NA = Not Applicable %DWB = (mg/kg DWB) / 10000
 MCL = Maximum Contaminant Levels for Drinking Water Samples. Shaded results indicate >MCL.

NOTES APPLICABLE TO THIS ANALYSIS:

S = This compound is a surrogate used to evaluate the quality control of a method.

LB = Compound is suspected of being a laboratory contaminant.

CC = Continuing calibration verification standard recovery was outside QC limits.

1,2,4-Trimethylbenzene recovery 122%

Methylene chloride recovery 147%

Naphthalene recovery 145%

LC = Laboratory control spike recovery was outside QC limits.

Methylene chloride recovered above QC limits at 150%.

BD = Compound was detected in the laboratory method blank.

Methylene chloride detected at 2.603 ug/L.

Values in brackets represent results greater than or equal to the LOD but less than the LOQ and are within a region of "Less-Certain Quantitation". Results greater than or equal to the LOQ are considered to be in the region of "Certain Quantitation". LOD and/or LOQ tagged with an asterisk(*) are considered Reporting Limits. All LOD/LOQs adjusted to reflect dilution.

LOD = Limit of Detection LOQ = Limit of Quantitation ND = Not Detected (< LOD) 1000 ug/L = 1 mg/L
 DWB = Dry Weight Basis NA = Not Applicable %DWB = (mg/kg DWB) / 10000
 MCL = Maximum Contaminant Levels for Drinking Water Samples. Shaded results indicate >MCL.

Isopropyl Ether	ND	ug/L	1	0.16	0.52	
Dibromofluoromethane (SURR)	103.03%					S
Toluene-d8 (SURR)	106.27%					S
1-Bromo-4-Fluorobenzene (SURR)	103.63%					S

NOTES APPLICABLE TO THIS ANALYSIS:

S = This compound is a surrogate used to evaluate the quality control of a method.

CC = Continuing calibration verification standard recovery was outside QC limits.

1,2-Dibromo-3-Chloropropane recovery 74%

Bromomethane recovery 37.1%

Chloromethane recovery 65.8%

URS CORPORATION - MILWAUKEE
6737 West Washington St., Suite 226
Milwaukee, WI 53214

Work Order: CSL0620
Project Name: Xcel Energy - Ashland
Project Number: Vendor Code #1160217

Attn: Paul Sklar

Date Received: 12/14/09

The Chain(s) of Custody, 2 pages, are included and are an integral part of this report.

If you have any questions relating to this analytical report, please contact your Laboratory Project Manager at 1-(800)750-2401

SAMPLE IDENTIFICATION	LAB NUMBER	COLLECTION DATE AND TIME
Air Stripper	CSL0620-01	12/09/09
1st Stage Carbon	CSL0620-02	12/09/09
Air Effluent	CSL0620-03	12/09/09

Case Narrative: Total Hydrocarbons quantified as Gasoline.

Field blanks are not used in sample correction unless noted.

Reproduction of this analytical report is permitted only in its entirety. This report shall not be reproduced except in full without the written approval of the laboratory.

TestAmerica Laboratories, Inc. certifies that the analytical results contained herein apply only to the specific sample analyzed.
