

U.S. Environmental Protection Agency

## Community Involvement Plan

Wisconsin Public Service Corporation Manitowoc Manufactured Gas Plant Site  
*City of Manitowoc, Manitowoc County, Wisconsin*

**W.A. No. 005-CRCR-05ZZ / Contract No. EP-S5-06-01**

**July 2008**

## Introduction

This Community Involvement Plan for the Wisconsin Public Service Corp., Manitowoc Manufactured Gas Plant site was prepared by U.S. Environmental Protection Agency, which is responsible for community involvement and cleanup activities at the site under the federal Superfund program. This CIP provides background information on the site and recommends activities EPA will do to continue to inform the public and local officials about progress at the site, and to encourage community involvement during the site cleanup.

This CIP also discusses the concerns of nearby residents and local officials regarding the site and ways for EPA to address them. The information in this plan is based primarily on discussions with residents that took place in May 2008.

## Site description

### Location and site features

The WPSC Manitowoc site is located at 402 N. 10th St. in Manitowoc, Wis., on the bank of the Manitowoc River. The site is about 4 acres with residential (to the north and east), commercial and industrial use properties in the vicinity. The site is bounded on the northwest by city-owned property and the Manitowoc River, on the east by North 10th Street, on the south by Chicago Street, and on the west by North 11th Street. A multi-tenant office building occupies much of the property, which was formerly used by Wisconsin Fuel & Light Company. Areas north, east and west of the building are covered by asphalt pavement, whereas the south side area is mostly grass. The city owns property between the site's north property line and the river. The property located west of the site on the other side of 11th Street is owned by Wisconsin Central Ltd. (along the river) and Braun Building Center Inc., located south of Wisconsin Central's property. The site is located in an area that was historically industrial, and currently the majority of the site is occupied by actively used commercial buildings and asphalt parking lots.

### Site Map

## Site background

### History and cleanup progress

WPSC is the current site owner, except for a small portion of the site owned by the city of Manitowoc that contains a parking lot. WPSC purchased the site from Wisconsin Fuel & Light Co. in 2000. Although records on the gas plant operations at the site are not complete, it has been determined that WPSC began gas manufacturing before 1900 and ended in 1947.

MGPs operated in Wisconsin from the late 1800s to the mid-20th century to provide fuel or electricity from coal or oil. To manufacture the fuel, coal and other ingredients were heated in large brick ovens. As the coal was heated, it produced a gas. The gas was filtered from the ovens and stored in tanks. The gas was then used as fuel throughout a community. By the early 1900s, Wisconsin had at least 70 MGP sites across the state. Manufacturing gas from coal generated a lot of waste. Typically, the coal waste was dumped in nearby ravines, ditches or used as fill for construction projects. Today, much of the waste is found to be hazardous. The waste includes cyanides, metals, solvents and oily tars. The oily tars are composed primarily of a group of compounds commonly found in motor oils called polynuclear aromatic hydrocarbons or PAHs. PAHs commonly found in MGP waste may also cause cancer in humans.

Plans for investigation of sediment, ground water and soil at six MGP sites (including Manitowoc) began after a legal agreement called a consent order was signed between WPSC and EPA in May 2006. This agreement allows for further investigation of the Manitowoc site and will help determine how much contamination remains in soil, sediment and ground water at the site. In summer 2008, technicians will begin sampling the Manitowoc River and the WPSC plant site.

Under Wisconsin Department of Natural Resources oversight, various investigations of the site have taken place since 1988. Some upland cleanup occurred from 1992 to 1994 when highly contaminated soil between the WPSC building and Manitowoc River was excavated and removed from the site or treated in place. Routine ground water monitoring occurs annually.

A completion report done by WPSC for EPA was finalized in 2007. This report summarizes past work and is available at the site document repositories listed in Appendix A and on EPA's Web site at [www.epa.gov/region5/sites/manitowoc](http://www.epa.gov/region5/sites/manitowoc). Fieldwork with an emphasis on sediment cleanup in Manitowoc is planned for summer 2008.

### Contaminants

The primary site contaminants are PAHs, hazardous organic chemicals commonly found at MGP sites that may cause cancer in humans. PAHs were introduced to the WPSC Manitowoc site through the disposal of waste created during fuel production. Most of the PAH contamination from MPG sites is in the form of coal tar buried under soil and does not pose a direct health risk; however, if coal tar residues come in contact with skin, it can cause redness or a rash. In some people, the coal tar can cause a sunburn effect on skin. Eye irritation is another hazard if coal tar residues get in the eyes.

The state has posted warnings about the contamination (oily or tar-like substances visible on the site) based on a mini-assessment by the Wisconsin Department of Health.

## Liability

WPSC has been identified as the party responsible for the contamination of this site. The company has agreed to pay for the investigation of the contamination through the Superfund Alternative Sites approach.

## Community background

The site lies within the city of Manitowoc, which is the county seat of Manitowoc County, Wis. Manitowoc is located on Lake Michigan at the mouth of the Manitowoc River. Cities nearby include Green Bay and Sheboygan (both areas with WPSC MGP sites). The city forms the core of the U.S. Census Bureau's Manitowoc Micropolitan Statistical Area, which includes all of Manitowoc County. As of the 2000 census, the racial makeup of the city was 93 percent White, almost 4 percent Asian, 2.5 percent Hispanic or Latino of any race, and less than 1 percent Black or African American or Native American.

The table below summarizes housing, income and population characteristics for Manitowoc, Manitowoc County and the state of Wisconsin.

<b>Community</b>	<b>Median Household Income (1999)</b>	<b>Median Home Value (2000)</b>	<b>Population (2000)</b>
Manitowoc	\$38,203	\$86,000	34,053
Manitowoc County	\$ 43,286	\$ 90,900	82,887
Wisconsin	\$43,791	\$112,200	5,363,675

Source: U.S. Census Bureau, 2007

## Status of community involvement activities

EPA's community involvement activities began in 2007 when a web page was developed and an information repository location identified (see page A-4). Community interviews were held on May 6 and 7, 2008 in anticipation of completion of this CIP. The purpose of the community interviews was to assess how much the community knew about the site, obtain area residents' and local officials' concerns about the site, and determine what information they wanted EPA to provide them and the best way to disseminate that information.

## Community issues and concerns

Overall, few residents and local officials who were interviewed in May 2008 had concerns about the WPSC Manitowoc site. This was mostly due to unfamiliarity with the site.

## Summary of community interviews

Seventeen residents and local officials were interviewed. Generally, residents were unfamiliar with the WPSC Manitowoc site. Following is a summary of the answers received during the community interviews.

## **What do you know about the WPSC Manitowoc MGP site?**

Most residents and several officials became aware of the site when they received a telephone call requesting their time to discuss the site with EPA. Few of those interviewed realized that contamination was an issue at the Manitowoc MGP location, though several had seen sheen on the water at the site. One person said he appreciated that EPA was going out and talking to people about the site.

Officials from the Manitowoc Wastewater Treatment Plant were aware that the site has an air stripper that is discharging to the treatment plant.

After they were called for interviews, several people went to the site to see the warning signs, and some saw the sheen from contamination on the water. Others checked the EPA Web site after they were called for an interview.

Several people remembered the area as the old Fuel & Light Company, and one knew that the river sediment needed to be worked on. One used to tie his boat out by the old gas bladder. Another person said he had smelled foul odors in the area.

The area that the site encompasses is called "the triangle" and is an area of interest for development.

The mayor of Manitowoc remembered the gas plant from when he was a kid. He knew that a Manitowoc crane was used to encapsulate what they were putting into the river. He had watched some of the cleanup in the 1990s and believed the job had been done. At that time, it had been in the news.

One retired biologist in the area knew the WPSC plant to be a source of pollution in the community. He said the process used "horrible" cancer-causing products. He said that the sawmills (prevalent in the area at the time the gas plant was in operation) provided sawdust to soak up the residuals.

## **What concerns do you have about the site?**

Some people do not believe there is a problem at the site as they have never seen a problem. Some thought the cleanup had been completed.

Because the site is located in a primarily industrial area, several people said they were not concerned about the site. Others were not concerned because there are methods available to clean it up.

Others were concerned about people, particularly children, being exposed to sediment from the site. There are places/trails where people walk and play on the south side of the river that have no retaining walls and are very close to the site. Someone did not like the idea that the area is still unsafe. If active swimming or fishing were occurring at the site location (which it is not), some would be concerned.

Some people were concerned by the obvious oil sheen on the water at the site and worried about it contaminating the river. Someone was concerned that the parking lot drains into the water, piles of sand have been moved from the site into the river, and creosote could be leaking out of telephone poles that were lying on the site.

Some officials said they were confident the site was being taken care of because EPA is dealing with it. One person said that if the cleanup was risky, he would be concerned.

Some people were concerned that the city's budget would be impacted by the cost of the

cleanup. Someone was concerned that the site will be reused as it is in a high value location.

Someone was concerned with possible impacts to the river and potential long-term affects; another about continual leaching from the site. Someone said that this is important and she does not want the importance minimized.

Questions that were asked about the sites included the following:

- Does the site need to be cleaned up?
- Who is responsible for the cleanup?
- Who will pay for the cleanup?
- What does the city think of this?
- How long is the cleanup process? Is there a timeline?
- How will the site be cleaned up?
- Once cleanup is complete, will EPA retest?
- How has the site been a threat to the community?
- What should be done during the investigation process to stay safe?
- Is it unfair to penalize the current owner if they were not responsible?
- Why did it take this long to figure out there was contamination at the site?
- Where are we in the process?
- Is there a plan? What is the cleanup plan?
- Who makes the decision? WDNR or EPA?
- What contaminants are on the site? And, what are their affects?
- Will the contamination get into the water system?
- Does the city have responsibility to notify buyers that land is contaminated?

**What risks do you think the site, in its current state, poses to you or your children?**

Most of those interviewed did not feel the site poses any risk, or if it does, they did not know what they are. Someone saw access to the site as a risk, particularly for children.

**How has the contamination affected your enjoyment of the area?**

No one interviewed has been affected by the contamination at the WPSC Manitowoc site. Although some had seen sheen on the water, others said they never saw anything to be concerned about and the water has looked fine.

Someone said it is a shame the river is polluted and is not good for swimming.

**What government officials have you interacted with about the site? Do you feel these officials have been responsive to your concerns?**

None of the residents and few local officials had talked to state or federal officials about the site. There had been no discussion since the cleanup that occurred in the 1990s when it was in the media. City of Manitowoc officials did not have any requests for information about the site.

Someone thought the mayor may have spoken about the site during a “Three Minutes with the Mayor” program.

There had been discussion about the site’s potential for redevelopment after the cleanup is complete. Several people were pleased that EPA was initiating a public campaign for the site and taking care of the problems at the site.

**How frequently do you think public meetings about the site should be held? Would you attend?**

The residents and officials that were spoken to were generally not interested in the site and did not think meetings would be necessary unless there is a health issue. It was suggested there would be fairly low interest in the site from the community, although several of the residents said they would attend a meeting about the site. Someone said that the community is active and people would attend a meeting about the site, but those meetings should be held when EPA has something to say.

Rather than hold its own meeting, it was recommended that EPA participate in city council meetings to share information or participate in “Business Connects with Government.”

### **What is a good meeting location?**

Council Chambers at city hall was suggested the most frequently as a good meeting location. Other suggestions included:

- Manitowoc Public Library
- Founder’s and County Board rooms at University of Wisconsin, Manitowoc
- Wisconsin Maritime Museum
- Manitowoc Parks and Recreation Department on 18th Street
- Holiday Inn
- Manitowoc County Complex on Expo Drive

### **Are you interested in receiving more information about the site? If yes, what’s the best way to provide that information to you (e-mail, regular mail)?**

All but one person interviewed was interested in receiving more information about the site. The majority of those interviewed preferred e-mail updates, while others asked to receive their information in the mail. For some, both formats would work equally well. Several of the officials felt that e-mail allowed them to more easily share information with others.

### **What type of media (e.g., newspaper, Internet, radio) do you rely on for information? What stations and papers do you prefer?**

Most people said they rely on the *Herald Times Reporter* newspaper for information. The *Lakeshore Chronicle* and *Valders Journal* are other newspapers that residents and officials read.

WOMT-1240 AM, WQTC-102 FM, WLTU-92.1 FM and WCUB – 980 AM are radio stations that are listened to in the area. Green Bay television stations are received in the Manitowoc area.

Some people rely on the Internet for news and would rely on EPA’s fact sheets. Someone suggested that a fact sheet should tell the story of the MGP sites and why Manitowoc is of concern.

### **When possible, site information is posted on EPA’s Web site. Have you used the EPA Region 5 Web site?**

A few of the people had visited the EPA Region 5 Web site, but most were unfamiliar with it.

Those who had used EPA’s Web site did so to research various subjects including:

- Verifying the existence of the Manitowoc site after receiving a call requesting an interview
- EPA programs for development
- How to deal with sites after buildings over contaminated areas have been removed
- Sustainable development
- Storm water mandates

## **How interested are you in environmental issues in general?**

Several people who were interviewed are interested in environmental issues including water and ground water quality, storm water management, lake levels, rivers and their depths, air quality, and underground storage tanks and leaking underground storage tanks for property investment purposes, and bird counting.

## **Are there any other people you think we should talk to about the WPSC Manitowoc site?**

It was recommended that EPA speak to people in the building on the site (Food Service Co.); the Chamber of Commerce; the Tourism and Convention Bureau; political figures in the area, including the mayor and city planners; city engineer; emergency management coordinator for Manitowoc; the director of public works; the Sea Grant office at the University of Wisconsin, Manitowoc; Charter Fisherman's Club; businesses adjacent to the site; the League of Women Voters; and a retired biologist in the area.

The Chamber of Commerce provided a list of service clubs and community organizations in the Manitowoc area that could be added to the site mailing list.

## **Proposed community involvement activities**

The next step for EPA is to address the issues, concerns and questions that were expressed about the site. To do this, EPA is proposing to:

### **Send fact sheets**

EPA will mail out fact sheets to those on the site's mailing list as a way to give updates on the site and its activities. The fact sheets will be mailed out periodically to inform the public about upcoming meetings and important technical information.

In addition to sending fact sheets via first class mail, EPA will develop an e-mail distribution list for interested parties who prefer e-mail. E-mails will contain a link to EPA's WPSC Manitowoc MGP Web site and to the electronic fact sheet.

### **Hold community meetings**

EPA may hold community meetings at key milestones. The meetings will be announced via newspaper notices, e-mail messages and fact sheets.

The Council Chambers at city hall will provide a convenient meeting location for the community. Meeting space at various locations was offered by several of the people interviewed. These spaces will be considered if the city hall is not available.

### **Stay in contact with key stakeholders**

In addition to fact sheets and public meetings, the site e-mail distribution list that will be developed based on interest could be used to provide regular, concise updates ranging from a few sentences to a few paragraphs.

A contact list of government officials and interested parties is in Appendix A.

### **Maintain information repositories**

An information repository was established at the University of Wisconsin-Manitowoc Library, 705 Viebahn Street. The repository contains information and documents about the site, including the legally enforceable agreement under which WPSC has agreed to conduct and pay for the investigation at the site. The agreement is called an Administrative Settlement

Agreement and consent order.

### **Work with local media**

EPA staff will continue to be available to local media. The most widely read newspaper in the community is the *Herald Times Reporter*. EPA will publish notices in this newspaper prior to any site milestone as appropriate.

Other newspapers that are read by the community including the *Lakeshore Chronicle* and *Valders Journal* will be provided site information.

Fact sheets and update letters may be provided to Green Bay media since these media outlets occasionally feature news on Manitowoc.

A contact list of area media services is in Appendix A.

### **Internet**

Since many residents expressed interest in receiving information electronically, EPA will continue to post site information at [www.epa.gov/region5/sites/manitowoc](http://www.epa.gov/region5/sites/manitowoc). Photographs and other site-related information will be added to the Web site as they become available.

### **Have a presence**

EPA's community involvement coordinator and remedial project manager will respond to inquiries from those interested in the site throughout the cleanup. They also will be available to speak to local citizen groups, upon request. EPA's toll-free telephone number and the project staff's direct numbers and e-mail addresses will be included on all community involvement material and are listed in Appendix A.
