RE: STATEMENT

Lee Wilson and Associates is preparing an environmental impact statement for proposed waste disposal facilities to be located on the Pueblo of Polacca in Northern New Mexico (NW 1/4, Section 14, Township 11N, Range 1E, see attached location map). With this in mind we are requesting information concerning circumstances or constraints on tribal habitation in the vicinity of the project. Attached is a holding plan survey of the area prepared for the Northern Pueblo Agency of the U.S. Bureau of Land Management.

Storage facilities will consist of multi-walled metal structures having 15 ft. high walls for active use and 30' for drywall. Debris storage is to be located in a designated landfill. This area will be fenced, which construction crews, tools, equipment, waste and supplies will be monitored for hazardous materials.

As indicated on the attached map, the facilities will be located adjacent to the watercourse. The watercourse will be dredged for a distance from yourself to Mr. Ballou & Son's of the Indian Ranch Service on May 29, 1970, in which you indicated no listed species would be affected by the facility.

A nearly identical copy of this letter and attachment has been sent to the New Mexico Department of Game and Parks.

If you require further information, please let us know.

Sincerely,

Lee Wilson
