Introduction

This web-based document serves as a user-friendly reference to assist permit writers and permittees in locating and understanding the current RCRA Hazardous Waste Treatment, Storage, and Disposal Facilities (TSDF) Regulations.

These requirements are located in [Title 40 Code of Federal Regulations \(CFR\), Part 264](#) for permitted facilities and [40 CFR Part 265](#) for interim status facilities. The requirements as laid out in this reference document are organized by the type of hazardous waste management activity, which encompasses hazardous waste treatment, storage, and disposal – that is containers, incinerators, landfills, land treatment, surface impoundments, tank systems, and waste piles.

Please note that this reference document is designed to be web-based, so its usefulness is maximized when it is viewed on a computer that is connected to the Internet.

The objective of this document is to consolidate and streamline the TSDF regulatory requirements into a helpful reference tool that features a user-friendly format, including references to EPA FAQs (Frequently Asked Questions), letters, memoranda, and guidance documents that EPA has provided to the public through the years to help owners, operators, and state and federal regulatory officials interpret the existing TSDF regulations. This document does not change any of the existing TSDF regulatory requirements.

How to Use This Tool

This document is navigable in several ways. First, permit writers and permittees can use the [Summary Chart](#) to link directly to the regulatory citation of interest in the Government Printing Office's [Electronic Code of Federal Register \(eCFR\) website](#) by left-clicking the mouse on the hyperlinks in the table. Clicking on the hyperlink will open the e-CFR in a new web-browser window, so the original document will also remain open.

Secondly, permit writers and permittees can take advantage of the Table of Contents or the bookmarks to navigate through the body of the document. The Table of Contents and bookmarks are organized by hazardous waste management activity (i.e., containers, tank systems, drip pads, surface impoundments, waste piles, land treatment, landfills, containment buildings, and incinerators). As a subset to each category of hazardous waste management activity, the user will find additional bookmarks linking to the regulatory requirements for each category of treatment system. In some cases, a particular regulatory requirement will be applicable to all categories of TSDFs; in others cases, to one or two categories. As above, owners, operators, and regulatory officials can

Note: *This web-based document is not a substitute for the CFR itself, the requirements in the CFR, or State requirements (that may be different from those reflected herein). This document is also not a rulemaking in any way. Additionally, this reference document presents only the federal requirements for TSDFs. Most states are authorized to manage their TSDF program.*

Therefore, states may have their own set of regulations that apply in lieu of federal regulations, and while most state TSDF regulations are based on the federal requirements, some states have developed regulations more stringent than the federal program. Go to the [following website](#) to access state regulatory programs.

Note: *It's possible that EPA could have inadvertently overlooked a relevant document and did not include it in this reference document. Therefore, we cannot guarantee that we captured every relevant document in each and every instance.*

Also, the documents included in this tool have already been issued and are in the public domain but they may not be the most current version.

use the Table of Contents and bookmarks to navigate by left-clicking the mouse on the link of interest in order to move within the document.

To help stakeholders better understand specific requirements, we also have provided, where applicable, hyperlinks to FAQs, letters, and memoranda issued by EPA, as well as guidance documents developed by EPA that provide further clarification of the TSDf regulations and permitting process. We have attempted to identify the relevant related FAQs, letters, memoranda, etc. on a particular subject. Once a permit writer or permittee has navigated to the regulatory "requirement" of interest, we have provided hyperlinks to the e-CFR website when the TSDf regulations cross-reference themselves or other regulations.

Because regulations are promulgated throughout the year, EPA will continue to update this reference document periodically to remain up-to-date with the TSDf regulatory requirements. However, as noted previously, this web-based reference document is not a substitute for the CFR itself or the requirements in the CFR. Additionally, the Government Printing Office frequently updates the e-CFR website to which the document is linked.

Overview of the Hazardous Waste RCRA Permitting Processes (Flowcharts) – [interactive versions of the flowcharts](#)

Note: The following 7 RCRA permitting process flow diagrams that also summarize public involvement activities (see the [RCRA Public Participation Manual](#)) were released for public comment pursuant to the Office of Solid Waste and Emergency Response (OSWER) Community Engagement Initiative (CEI). Under CEI Action 1, OSWER developed and posted program work plans, which identified specific processes that should be evaluated and potentially revised to enhance public participation.

OSWER sought [public comment](#) on those work plans and on the following RCRA permitting program process diagrams, which were developed to increase transparency of the opportunities for community involvement. The comment period for the work plans and process diagrams ended on July 31, 2011. EPA will assess comments received and, as a result, may modify these process diagrams. If that happens, the following process flow diagrams will be updated accordingly.

RCRA Hazardous Waste Pre-Permit Application Meeting

Additional Information

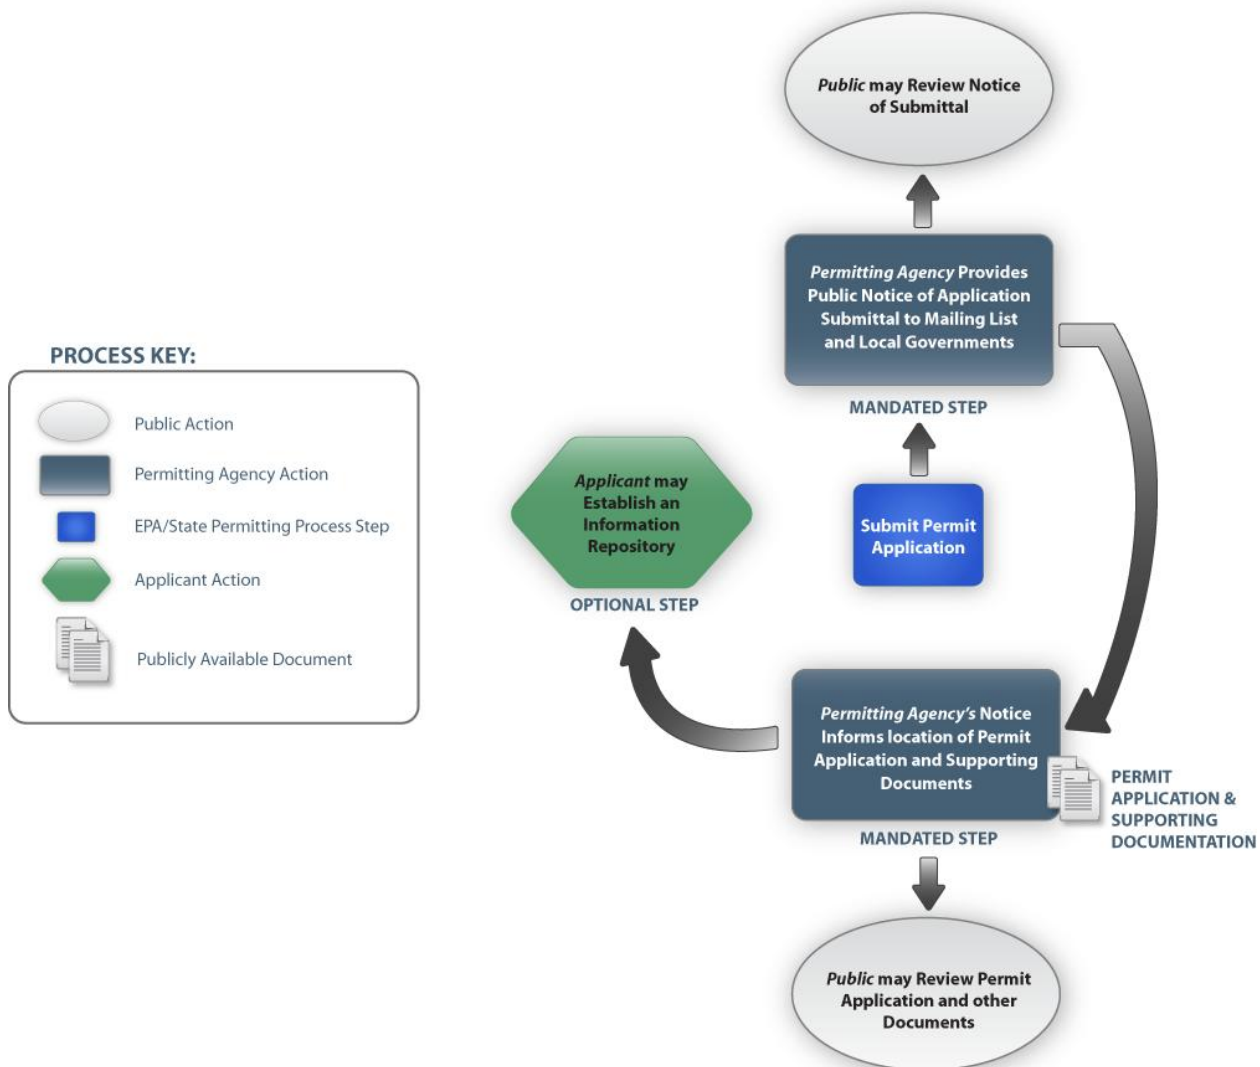

When an applicant announces an upcoming meeting through a public notice, it must include:

- The date, time, and location of the meeting.
- A brief description of the purpose of the meeting.
- A brief description of the facility and proposed operations, including the address or a map of the facility location.
- A statement encouraging people to contact the facility at least 72 hours before the meeting if they need special access to participate in the meeting.
- The name, address, and telephone number of a contact person for the applicant.

*Meeting Documents include: Meeting Summary, Attendee List, Attendee Feedback, and Applicant Responses to Attendee Feedback

NOTE: This step applies only to RCRA hazardous waste permits for new TSD facilities and RCRA hazardous waste renewal permits for existing TSD facilities that undergo significant changes, and does not apply to post-closure or post-closure / corrective action permits.

Submit a RCRA Hazardous Waste Permit Application

Additional Information

When the Permitting Agency announces the permit application submittal, the public notice must include:

- The name and telephone number of the applicant's contact person.
- The name and telephone number of the permitting agency's contact office and a mailing address to which information, opinions, and inquiries may be directed throughout the permit review process.
- An address to which people can write to be put on the facility mailing list.
- The location where copies of the permit application and any supporting documents can be viewed and copied.
- A brief description of the facility and proposed operations, including the address or a map of the facility location on the front page of the notice.
- The date the application was submitted.

Issue a Draft RCRA Hazardous Waste Permit

Additional Information

- Permitting agencies can keep the process open by sharing all Notice of Deficiency (NOD) information with the public, whether through the administrative record, an information repository, or another activity, such as a workshop.
- Interested community groups or the permit applicant may decide to provide additional public participation activities during this stage. These could include technical discussions to explain the NOD process or informal meetings with the permitting agency.
- The agency, facility, or a public interest group may want to organize an availability session, facility tours, or some other activity prior to the comment period so that the public can be better informed about the facility.

Issue a Final RCRA Hazardous Waste Permit

Additional Information

- If there was high interest during the comment period, the agency or the facility may want to issue a news release and fact sheet when the decision is finalized to inform a wide audience.
- The permitting agency may choose to update and release the fact sheet required in § 124.8
- **NOTE:** Permitting Agency responses to Public comments on the Draft Permit and ROD are placed in the Administrative Record and Information Repository

RCRA Hazardous Waste Combustor Trial Burns

Additional Information

***NOTE:** Emissions from combustion sources burning hazardous waste (e.g., cement kilns, incinerators, lightweight aggregate kilns, boilers and hydrochloric acid production furnaces) are primarily regulated pursuant to Clean Air Act and applicable Title V requirements. However, these combustion sources still need a RCRA permit to operate even after documenting compliance with CAA requirements. However, the RCRA permit only needs to address basic hazardous waste management including: general facility standards; corrective action; other hazardous waste management units (such as storage units); other combustor-specific concerns such as materials handling; and, any risk-based combustor emission and operating requirements that are more stringent than the relevant MACT standard. The Clean Air Act title V permit will focus on the operation of the combustion unit including the MACT air emission standards and related operating parameters.

- [Maximum Achievable Control Technology \(MACT\) EEE Test Requirements](#)
- [Clean Air Act – Title V Permits](#)

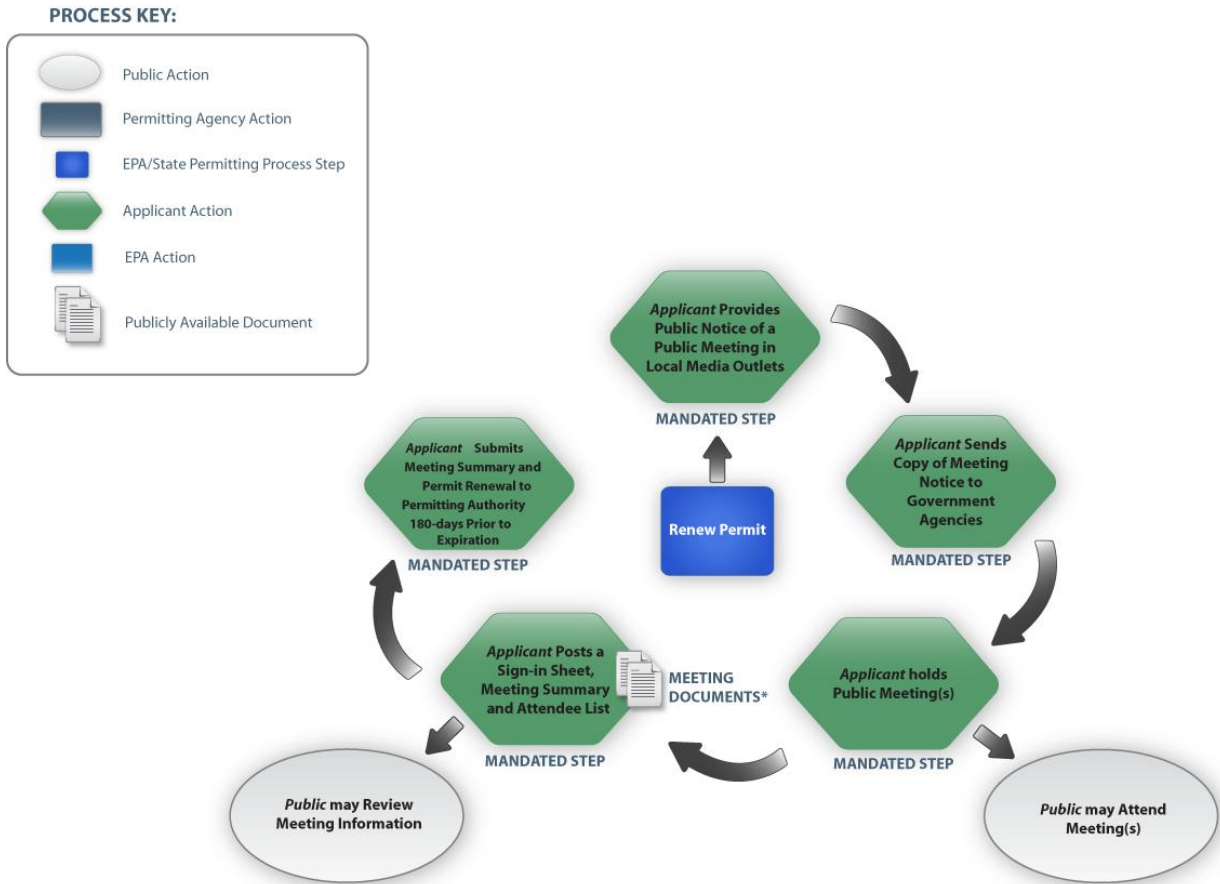

Modify a RCRA Hazardous Waste Permit

Additional Information

- Facility-initiated modifications are classified as Class 1, 2, or 3 according to the nature of the change.
- More often, facility owners or operators initiate the permit modification, rather than the permitting agency, in order to improve facility operations or make changes in response to new standards.
- **NOTE:** Public Participation steps above are only applicable to Class 2 and Class 3 modifications. For Class 1 Modifications, the Permittee issues notice to the facility mailing list after implementation and anyone has the opportunity to request the Director to review the Class 1 Modification request.

Renew a RCRA Hazardous Waste Permit

Additional Information

Permit Renewal process is similar to issuing a new permit, requiring draft and final permit issuance steps. When an applicant announces an upcoming meeting through a public notice, it must include:

- The date, time, and location of the meeting.
- A brief description of the purpose of the meeting.
- A brief description of the facility and proposed operations, including the address or a map of the facility location.
- A statement encouraging people to contact the facility at least 72 hours before the meeting if they need special access to participate in the meeting.
- The name, address, and telephone number of a contact person for the applicant.

*Meeting Documents include: Meeting Summary, Attendee List, Attendee Feedback, and Applicant Responses to Attendee Feedback

These steps only apply to renewal applications proposing changes that qualify as Class 3 permit modifications.

This module enables you to be able to discuss the general requirements for TSDFs and discern the differences between the applicability of Part 264 versus Part 265.

[Permits and Interim Status \(PDF\)](#) (25 pp, 63 K) – RCRA Training Module: Introduction to Permits and Interim Status (40 CFR Part 270) – September 2005. This module presents an overview of the RCRA permitting process and the requirements that apply to TSDFs operating under interim status until a permit is issued. The regulations governing the permitting process are found in 40 CFR Parts 124 and 270.

Storage Training Modules - Storage is the holding of waste for a temporary period of time prior to the waste being treated, disposed, or stored elsewhere. Hazardous waste is commonly stored prior to treatment or disposal, and must be stored in containers, tanks, containment buildings, drip pads, waste piles, or surface impoundments that comply with the RCRA regulations. The regulatory requirements for these types of storage units are found in [40 CFR Part 264](#) for permitted facilities and [40 CFR Part 265](#) for interim status facilities.

[Containers \(PDF\)](#) (13 pp, 56K) - RCRA Training Module: Introduction to Containers (40 CFR Parts 264/265; Subpart I; Section 261.7) – September 2005. A hazardous waste container is any portable device in which a hazardous waste is stored, transported, treated, disposed, or otherwise handled. The most common hazardous waste container is the 55-gallon drum. Other examples of containers are tanker trucks, railroad cars, buckets, bags, and even test tubes.

[Containment Buildings \(PDF\)](#) (14 pp, 58K) - RCRA Training Module: Introduction to Containment Buildings (40 CFR Parts 264/265; Subpart DD) – September 2005. Containment buildings are completely enclosed, self-supporting structures (i.e., they have four walls, a roof, and a floor) used to store or treat non-containerized hazardous waste.

[Drip Pads \(PDF\)](#) (12 pp, 33K) - RCRA, Superfund & EPCRA Hotline Training Module: Introduction to Drip Pads (40 CFR Parts 264/265, Subpart W) – October 2001. A drip pad is a wood drying structure used by the pressure-treated wood industry to collect excess wood preservative drippage. Drip pads are constructed of non-earthen materials with a curbed, free-draining base that is designed to convey wood preservative drippage to a collection system for proper management.

[Tanks \(PDF\)](#) (21 pp, 114K) - RCRA Training Module: Introduction to Tanks (40 CFR Parts 264/265; Subpart J) – September 2005. Tanks are stationary devices constructed of non-earthen materials used to store or treat hazardous waste. Tanks can be open-topped or completely enclosed and are constructed of a wide variety of materials including steel, plastic, fiberglass, and concrete.

[Surface Impoundments \(PDF\)](#) (16 pp, 165K) - RCRA Training Module: Introduction to Land Disposal Units (40 CFR Parts 264/265; Subparts K, L, M, N) – September 2005. A surface impoundment is a natural

topographical depression, man-made excavation, or diked area such as a holding pond, storage pit, or settling lagoon. Surface impoundments are formed primarily of earthen materials and are lined with synthetic plastic liners to prevent liquids from escaping.

[Waste Piles \(PDF\)](#) (16 pp, 165K) - RCRA Training Module: Introduction to Land Disposal Units (40 CFR Parts 264/265; Subparts K, L, M, N) – September 2005. Hazardous waste waste piles must be placed on top of a double liner system to ensure leachate from the waste does not contaminate surface or ground water supplies.
