

Federal Operating Permit Program (40 CFR Part 71)

EMISSION UNIT DESCRIPTION FOR PROCESS SOURCES (EUD-3)

Α.	General Information				
	Emissions unit ID	Description			
	SIC Code (4-digit) _	SCC Code			
В.	B. Emissions Unit Description				
	Primary use or equi				
	Manufacturer		Model N	No	
	Serial No	Installation date/		tion date/	
	Raw materials				
	Finished products				
	Temporary source:NoYes				
C. Activity or Production Rates					
Activity or Ar Production Rate		Amount/Hour		Amount/Year	
Ac	ctual Rate				
Ma	aximum rate	_			
D. Associated Air Pollution Control Equipment					
	Emissions unit ID _	Device Type			
	Manufacturer Model No				
	Serial No//Installation date//				
	Control efficiency (%) Capture efficiency (%)				
	Air pollutant(s) controlled Efficiency estimation method				

EUD-3 2

This information must be completed by temporary sources or when ambient impact assessment is an applicable requirement for this emissions unit (This is not common)).

Stack height (ft) ______ Inside stack diameter (ft) _______

Stack temp (F) ______ Design stack flow rate (ACFM) _______.

Actual stack flow rate (ACFM) _______. Velocity (ft/sec) _______.

INSTRUCTIONS FOR EUD-3 EMISSIONS UNIT DESCRIPTION FOR PROCESS SOURCES

This form is designed to describe emissions units for processes for which forms EUD-1 or EUD-2 are not appropriate. For example, sources such as rock crushers and asphalt batch plants. This form will help you to collect and organize technical information, including operational characteristics, applicable requirements, compliance terms, and emissions for each emissions unit.

- **Section A** The emissions unit ID should be consistent with the one used in section I of form **GIS**. Enter the four-digit SIC code for the unit, which may be different form that used for the facility as a whole. In addition, complete the Source Classification Code (SCC), if known or available, but this is not mandatory.
- **Section B** There may be other information that the permitting authority will need to know that is not specifically requested on the forms and that should be included on attachments. Such information would include information needed to adequately identify the emissions unit and to determine its applicable requirements.
- **Section C** The amount of raw materials that are processed and/or the number of activities performed are values that are typically multiplied by emissions factors to calculate PTE and actual emissions.
- **Section D** Identify and describe any associated air pollution control device. Attach copies of correspondence from the vendor documenting these values, if available, or indicate how these values were otherwise determined (e.g., AP-42).
- **Section E** Complete this section only if ambient impact assessment is an applicable requirement or the facility is a temporary source. This is not common.
