EMAD ambient monitoring and QA personnel

Subject: AQS Documentation - Algorithms for calculating summary statistics now available on TTN web page.

Date: April 14, 2004

At last year's AQS Conference, we were asked to provide documentation explaining the algorithms used by the AQS to calculate the system-generated summary fields for both raw data and precision and accuracy data. We have compiled a first draft of these algorithms into 2 documents; one for raw data and one for precision and accuracy data.

We have posted these draft documents on our Technology Transfer Network (TTN) website for your information and review. We plan to finalize these documents after the AQS Conference (in June) and would welcome any comments by May 15. Thank you.
