### Overview

This data package consisted of eighteen (18) soil samples and one (1) rinsate blank analyzed for semivolatiles, Polycyclic Aromatic Hydrocarbons (PAHs) by Selected Ion Monitoring (SIM), pesticides, and Aroclors. In addition, twelve (12) of the soil samples, one (1) rinsate blank, and one (1) trip blank were analyzed for volatiles.

Analyses were performed by Chemtech Consulting Group (CHM) through the Contract Laboratory Program (CLP) according to Statement of Work (SOW) SOM02.4.

Data were validated according to the National Functional Guidelines for Organic Superfund Methods Data Review and applicable USEPA Region 3 modifications. Electronic validation was performed by the Electronic Data eXchange & Evaluation System (EXES). The validation report has been assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual).

The following validation narrative is an evaluation of laboratory reported data based on the electronic data package available through the EXES Data Manager dated December 23, 2020.

### Summary

Dual column precision outliers were identified that resulted in rejection of sample results. Less significant data quality outliers requiring estimation of sample results were identified including, but not limited to, Deuterated Monitoring Compound (DMC)/surrogate recovery, calibration precision, and calibration exceedances as detailed below.

**Major Problem**

The following analytes had results greater than Contract Required Quantitation Limits (>CRQLs) with Percent Difference (%D) >200% between the dual column analyses. The large %D between the two results may indicate interferences impacting the analyte. Reported results for these analytes in samples listed below have been rejected and qualified "R".

| Fraction  | Affected Samples | Affected Analytes              |
|-----------|------------------|--------------------------------|
| Pesticide | COAY1            | cis-Chlordane, trans-Chlordane |
|           | COB50            | trans-Chlordane                |

**Minor Problem**

Percent recoveries for the following DMC/surrogate were outside the lower control limit for the samples listed below. Detected results >CRQL for pesticides and Aroclors in these samples are estimated and have been qualified "J". Quantitation limits are estimated and have been qualified "UJ".

| Fraction     | DMC/Surrogate      | Affected Samples                                |
|--------------|--------------------|---|
| Semivolatile | 1,4-Dioxane-d8     | COAX3   |
| Pesticide    | Decachlorobiphenyl | COAX3, COAZ2, COB21, COB28, COB46, COB50        |
| Aroclor      | Decachlorobiphenyl | COAX8, COAY4, COAY9, COAZ2, COB10, COB52, COB57 |

The following analyte failed Percent Difference (%D) criteria in continuing calibration verification analysis. The detected result for analyte in the sample is estimated and has been qualified "J".

| Fraction     | Standard ID | Affected Analytes    | Associated Samples |
|--------------|-------------|----------------------|--------------------|
| Semivolatile | SSTD02089   | Butylbenzylphthalate | COAY4              |

The following analytes exceeded calibration range in the diluted analysis of samples listed below; the samples were not reanalyzed at further dilution. Detected results are estimated and have been qualified "J".

| Fraction | Sample | DF | Analyte  |
|----------|--------|----|--|
| PAH      | COAX3  | 5x | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene |
|          | COAZ2  | 5x | Fluoranthene, Pyrene   |
|          | COB28  | 5x | Phenanthrene, Fluoranthene, Pyrene, Benzo(b)fluoranthene   |
|          | COB41  | 5x | Fluoranthene, Pyrene, Benzo(b)fluoranthene   |

**Notes**

Target analytes detected at concentrations below Contract Required Quantitation Limits (CRQLs) are estimated and have been qualified "J".

For the volatile fraction, method blanks VBLK13, VBLK14, and VBLK16 and storage blank VHBLK01 reported detected concentrations of methylene chloride less than the CRQL. Detected concentrations of methylene chloride in the associated samples are not qualified because the results are >CRQL and >2x blank result.

Method blanks were free from contamination for other fractions.

Trip blank COBH9 was free from contamination for the volatile analytes. Rinsate blank COBH8 was free from contamination for all fractions.

Pesticide and Aroclor results with Percent Difference (%D) between the two (2) analytical columns of > 25.0% and < 200% are estimated and have been qualified "J". The lower of the two (2) column result is reported.

Laboratory Control Samples (LCSs) reported recoveries of spiked analytes within control limits. No data were qualified based on LCS accuracy.

Matrix Spikes/Matrix Spike Duplicates (MSs/MSDs) reported recoveries and Relative Percent Differences (RPDs) of spiked analytes within control limits. No data were qualified based on MS/MSD accuracy and precision.

The semivolatile analytes butylbenzylphthalate and bis(2-ethylhexyl)phthalate failed Percent Relative Standard Deviation (%RSD) criteria in the initial calibration analyzed on 12/10/2020. The detected result for butylbenzylphthalate in the associated sample COAY4 (analyzed at a dilution) is estimated and has been qualified "J". The result for bis(2-ethylhexyl)phthalate in sample COAY4 is not qualified because it was reported from the undiluted analysis.

Concentrations of the following analytes exceeded the calibration range in the initial analysis of the samples listed. The samples were reanalyzed at dilution in order to quantitate these analytes within the calibration range and the analytes were reported from the dilution. There is no indication that these exceedance issues impacted subsequent sample analyses.

| Fraction     | Sample | DF   | Analyte  |
|--------------|--------|--|--|
| Semivolatile | COAY4  | 2x   | Butylbenzylphthalate   |

| Pesticide    | COAY1  | 5x   | Dieldrin   |

Manual integrations were performed and identified by the laboratory. A subset of these was evaluated and found to be accurate and consistent. No action was taken based on manual integrations.

Tentatively Identified Compounds (TICs) are not reviewed by data validators. The validation qualifiers are applied by EXES electronic validation based on laboratory qualifiers. By definition, all compounds identified as TICs should be treated as tentative identifications and all reported results should be considered estimated.

Sample calculation checks were performed on sample COAX3. All calculated results had Relative Percent Differences (RPDs) less than 5% of the reported results. No sample data were qualified.

Validation qualifiers are only applied by the validator to field samples. Qualifiers may be applied by EXES electronic validation to laboratory quality control samples.

**Glossary of Organic Data Qualifier Codes**

---

**Validation Qualifiers**

In order of descending precedence. Only one of these qualifiers may apply to any result.

---

- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.

---

**Additional Qualifiers**

Additional qualifiers may be combined with other qualifiers.

---

- N The analyte has been "tentatively identified" or "presumptively" as present.
- B The result is presumed a blank contaminant. This qualifier is used for drinking water samples only.
- C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatography/Mass Spectrometry (GC/MS). This qualifier may be added to other qualifiers.
- X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed. This qualifier may be added to other qualifiers.

Norwood Landfill

### **Overview**

This data package consisted of two (2) trip blanks and fourteen (14) soil samples including three field duplicate samples analyzed for volatile analytes and two (2) rinsate blanks and one (1) soil sample analyzed for volatile, semivolatile, semivolatile PAH by SIM, pesticide and Aroclor analytes.

Analyses were performed by Chemtech Consulting Group (CHM) according to Contract Laboratory Program (CLP) Statement of Work (SOW) SOM02.4.

Data were validated according to the National Functional Guidelines for Organic Superfund Methods Data Review and applicable USEPA Region 3 modifications. Electronic validation was performed by the Electronic Data eXchange & Evaluation System (EXES). The validation report has been assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual).

The following validation narrative is an evaluation of laboratory reported data based on the electronic data package available through the EXES Data Manager dated December 4, 2020. In addition, the reconciliation data dated December 16, 2020 was noted.

### **Summary**

No significant data quality outliers were identified that would require rejection of sample results. Blank contamination in the volatile fraction and calibration standards in semivolatile and PAH fractions required qualification.

**Minor Problem**

The following analytes failed Percent Difference (%D) criteria in calibration standards listed below. Positive results and quantitation limits for these analytes in the associated sample are estimated and have been qualified "J" and "UJ", respectively.

| <b>Fraction</b> | <b>Standard ID</b> | <b>Affected Analytes</b>                                | <b>Associated Sample</b> |
|-----------------|--------------------|---|--------------------------|
| Semivolatile    | SSTD02066          | bis(2-Chloroethyl)ether,<br>2,2-oxybis(1-Chloropropane) | COAY0                    |
| PAH             | SSTD0.418          | Benzo(a)anthracene                                      | COAY0                    |

**Notes**

Detected concentrations for target analytes less than Contract Required Quantitation Limits (CRQL) are estimated and have been qualified "J".

Laboratory blanks were free of contamination in all fractions with the exception of the volatile fraction. Target analyte 2-hexanone was reported <CRQL in VBLK86 and VHBLK02 which were associated with water samples. Target analytes were reported in several blanks which were associated with soil samples: carbon disulfide and methylene chloride <CRQL in VBLK08, methylene chloride <CRQL in volatile blank VBLK07 and VBLK11, acetone <CRQL in VBLK11 and VHBLK01 and methylene chloride >CRQL in VHBLK01. Carbon disulfide was not detected in field samples. Positive results for 2-hexanone, acetone and methylene chloride <CRQL in affected samples have been raised to the CRQL and qualified "U". Positive results for acetone >CRQL but <2X the holding blank value have been reported and qualified "U".

Trip blanks, samples COBG4 and COBG8, were free of contamination. The rinsate blanks, samples COBH0 and COBG9, reported concentrations of acetone and/or dimethylphthalate <CRQL. Positive results for these analytes <CRQL in associated samples have been reported at CRQL and qualified "U".

Samples COBH2, COBH3 and COBH5 are listed as field duplicate samples on the chain of custody records. The duplicate pairs to these samples were not identified. Comparison of results could not be made.

Laboratory Control Samples (LCS) analyzed in pesticide and Aroclor fractions reported acceptable results.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses of pesticide and Aroclor samples COAY0 reported acceptable results.

Tentatively Identified Compounds (TICs) are not reviewed by the data validators. The validation qualifiers are applied by EXES electronic validation based on laboratory qualifiers. By definition, all compounds identified as TICs should be treated as tentative identifications and all reported results should be considered estimated.

Sample calculation checks were performed. All calculated results had RPDs less than 5% of the reported results. No sample data were qualified.

Manual integrations were performed and identified by the laboratory. A subset of these was evaluated and were found to be accurate and consistent. No action was taken based on manual integrations.

Validation qualifiers are only applied by the validator to field samples. Qualifiers may be applied by EXES electronic validation to laboratory quality control samples.

### **Glossary of Organic Data Qualifier Codes**

|                       |   |
|-----------------------|---|
| Validation Qualifiers | In order of descending precedence. Only one of these qualifiers may apply to any result.  |
| R                     | The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.             |
| UJ                    | The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.                                      |
| U                     | The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit  |
| J                     | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.  |
| J+                    | The result is an estimated quantity, but the result may be biased high.   |
| J-                    | The result is an estimated quantity, but the result may be biased low.  |
| Additional Qualifiers | Additional qualifiers may be combined with other qualifiers.  |
| N                     | The analyte has been "tentatively identified" or "presumptively" as present.  |
| B                     | The result is presumed a blank contaminant. This qualifier is used for drinking water samples only.   |
| C                     | The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatography/Mass Spectrometry (GC/MS). This qualifier may be added to other qualifiers. |
| X                     | The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed. This qualifier may be added to other qualifiers.                |

### Overview

This data package consisted of twenty (20) soil samples analyzed for volatile target analytes.

Analyses were performed by Chemtech Consulting Group (CHM) through the Contract Laboratory Program (CLP) according to Statement of Work (SOW) SOM02.4.

Data were validated according to the National Functional Guidelines for Organic Superfund Methods Data Review and applicable USEPA Region 3 modifications. Electronic validation was performed by the Electronic Data eXchange & Evaluation System (EXES). The validation report has been assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual).

The following validation narrative is an evaluation of laboratory reported data based on the electronic data package available through the EXES Data Manager dated December 9, 2020.

Trip blank COBG8 (from SDG COAY0) was associated with samples in this SDG and used in the evaluation of this data.

### Summary

No significant data quality outliers or technical deficiencies were identified that would require rejection of sample results. Internal standard and calibration issues required estimation of sample results.

### Minor Problems

The area response for internal standard 1,4-dichlorobenzene-d4 was outside the lower control limit (20%) in the initial analysis for sample COBB5. This sample was reanalyzed with the area response greater than 20% but less than 50%. Results were reported from the reanalysis. Associated analytes were not detected in this sample; quantitation limits are estimated and have been qualified "UJ".

Trichloroethene failed criteria [percent Difference (%D)] in a continuing calibration standard. This analyte was not detected in associated samples; quantitation limits are estimated and have been qualified "UJ" in affected samples.

### **Notes**

Detected concentrations for target analytes less than Contract Required Quantitation Limits (CRQLs) are estimated and have been qualified "J".

Trip blank COBG8 was free from contamination.

Storage blank VHBLK01 reported concentrations for acetone less than the CRQL and for methylene chloride greater than the CRQL. Detected concentrations for these analytes less than the CRQL were reported at the CRQL and qualified "U". Detected concentrations for methylene chloride which were less than twice (<2X) the blank concentration have been qualified "U" as reported.

Method blank VBLK07 reported a concentration for methylene chloride less than the CRQL. The detected concentration for associated sample COAZ1 was less than twice (<2X) the blank concentration and qualified "U" as reported.

Method blanks VBLK08, VBLK09 and VBLK10 reported concentrations for acetone, carbon disulfide, methylene chloride, and/or 4-methyl-2-pentanone less than the CRQLs. Carbon disulfide was not detected in associated samples; quantitation limits were not qualified based on this finding. Detected concentrations for the remaining analytes in associated samples less than the CRQLs were reported at the CRQL and qualified "U".

Percent recoveries for Deuterated Monitoring Compounds (DMCs) benzene-d6, 1,2-dichloropropane-d6, and 1,1,2,2-tetrachloroethane-d2, were outside upper control limits for the initial analysis for sample COBB5. This sample was reanalyzed due to internal standard area response. DMCs 1,2-dichloropropane-d6 and 2-hexanone-d5 were outside upper control limits for the reanalysis. Results were reported from the reanalysis. The detected concentration for associated analyte 4-methyl-2-pentanone was less than the CRQL and qualified "J". The remaining associated analytes were not detected and were not qualified based on this finding.

One of the three Encore vials received for sample COBB4 was without soil. There was sufficient sample in the other two vials for analysis. No data were qualified based on this finding.

Manual integrations were performed and identified by the laboratory. A subset of these was evaluated by the validator and found to be accurate and consistent. No action was taken by the validator based on manual integrations.

Tentatively Identified Compounds (TICs) are not reviewed by data validators. The validation qualifiers are applied by EXES electronic validation based on laboratory qualifiers. By definition, all compounds identified as TICs should be treated as tentative identifications and all reported results should be considered estimated.

Sample calculation checks were performed on sample COBB5. All calculated results had Relative Percent Differences (RPDs) less than 5% of the reported results. No sample data were qualified.

Validation qualifiers are only applied by the validator to field samples. Qualifiers may be applied by EXES electronic validation in addition to laboratory quality control samples.

### Glossary of Organic Data Qualifier Codes

---

Validation Qualifiers In order of descending precedence. Only one of these qualifiers may apply to any result.

---

- R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- UJ The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
- U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit
- J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may be biased high.
- J- The result is an estimated quantity, but the result may be biased low.

---

Additional Qualifiers Additional qualifiers may be combined with other qualifiers.

---

- N The analyte has been “tentatively identified” or “presumptively” as present.
- B The result is presumed a blank contaminant. This qualifier is used for drinking water samples only.
- C The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatography/Mass Spectrometry (GC/MS). This qualifier may be added to other qualifiers.
- X The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed. This qualifier may be added to other qualifiers.

### **Overview**

This data package consisted of nineteen (19) soil samples analyzed for Semi-volatiles, Polycyclic Aromatic Hydrocarbons (PAHs) by Selected Ion Monitoring (SIM), Pesticides, and Aroclors.

Analyses were performed by Chemtech Consulting Group (CHM) through the Contract Laboratory Program (CLP) according to Statement of Work (SOW) SOM02.4.

Data were validated according to the National Functional Guidelines for Organic Superfund Methods Data Review and applicable USEPA Region 3 modifications. Electronic validation was performed by the Electronic Data eXchange & Evaluation System (EXES). The validation report has been assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual).

The following validation narrative is an evaluation of laboratory reported data based on the electronic data package available through the EXES Data Manager dated December 16, 2020.

### **Summary**

No significant data quality outliers or technical deficiencies were identified that would require rejection of sample results. Surrogate recovery, dual column precision and concentration exceeding calibration range required qualification of results.

### **Minor Problem**

Percent recoveries for pesticide surrogate decachlorobiphenyl were outside the lower control limit for samples COAY8, COAZ4, COB56, COB61, COB62, COB70, and COBH4. Detected results >CRQL for pesticides in these samples are estimated and have been qualified "J-".

The following analytes exceeded calibration range in the diluted analysis of sample COBB5; the sample was not reanalyzed at further dilution. Detected results are estimated and have been qualified "J".

| Fraction | Sample | DF | Analyte  |
|----------|--------|----|--|
| PAH      | COBB5  | 5x | Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene |

### **Notes**

Target analytes detected at concentrations below Contract Required Quantitation Limits (CRQLs) are estimated and have been qualified "J".

Aroclor and pesticide results with Percent Difference (%D) between the two (2) analytical columns of > 25.0% and < 200% are estimated and have been qualified "J". The lower of the two (2) column result was reported.

Laboratory Control Samples (LCSs) reported recoveries of spiked analytes within control limits. No data were qualified based on LCS accuracy.

Matrix Spikes/Matrix Spike Duplicates (MSs/MSDs) reported recoveries and Relative Percent Differences (RPDs) of spiked analytes within control limits except for Matrix Spike (COB04MS) recovery (137%) of Aroclor-1260. No data were qualified based on MS/MSD accuracy and precision.

Semivolatiles percent recoveries for DMC/surrogates (2-Chlorophenol-d4, 2-Nitrophenol-d4, Acenathylene-d8) were outside the upper control limit for sample COBC3. The associated analytes were not detected in these samples. Quantitation limits are not qualified.

Results reported for field duplicate pair COB04/COBH2 were comparable for SVOC & Pesticides. No data were qualified based on field duplicate precision.

Results reported for field duplicate pair COB04/COBH2 RPD for Aroclor-1254 exceeded the 25% RPD limit. No data were qualified based on field duplicate precision.

Results reported for field duplicate pair COB04/COBH2 RPD for PAH exceeded the 25% RPD limit for multiple analytes (Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene and Benzo(g,h,i)perylene). No data were qualified based on field duplicate precision.

Concentrations of the following analytes exceeded the calibration range in the initial analysis of samples listed. These samples were reanalyzed at dilution in order to quantitate these analytes within the calibration range and the analytes were reported from the dilutions. There is no indication that these exceedance issues impacted subsequent sample analyses.

| Fraction | Sample | DF  | Analyte   |
|----------|--------|-----|---|
| PAH      | COAY8  | 5x  | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene, Benzo(g,h,i)perylene  |
|          | COAZ1  | 5x  | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene  |
|          | COAZ3  | 5x  | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene  |
|          | COB56  | 5x  | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene  |
|          | COB61  | 5x  | Fluoranthene, Pyrene, Benzo(b)fluoranthene, Benzo(a)pyrene,   |
|          | COB62  | 10x | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene  |
|          | COBB5  | 5x  | Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenz(a,h)anthracene, Benzo(g,h,i)perylene |
|          | COBH4  | 10x | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene  |

Manual integrations were performed and identified by the laboratory. A subset of these was evaluated and found to be accurate and consistent. No action was taken based on manual integrations.

Tentatively Identified Compounds (TICs) are not reviewed by data validators. The validation qualifiers are applied by EXES electronic validation based on laboratory qualifiers. By definition, all compounds identified as TICs should be treated as tentative identifications and all reported results should be considered estimated.

Sample calculation checks were performed. All calculated results had Relative Percent Differences (RPDs) less than 5% of the reported results. No sample data were qualified.

Validation qualifiers are only applied by the validator to field samples. Qualifiers may be applied by EXES electronic validation to laboratory quality control samples.

**Glossary of Organic Data Qualifier Codes**

---

|                       |  |
|-----------------------|--|
| Validation Qualifiers | In order of descending precedence. Only one of these qualifiers may apply to any result. |
|-----------------------|--|

---

|    |   |
|----|---|
| R  | The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample. |
| UJ | The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.                          |
| U  | The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.   |
| J  | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.                              |
| J+ | The result is an estimated quantity, but the result may be biased high.   |
| J- | The result is an estimated quantity, but the result may be biased low.  |

---

|                       |  |
|-----------------------|--|
| Additional Qualifiers | Additional qualifiers may be combined with other qualifiers. |
|-----------------------|--|

---

|   |   |
|---|---|
| N | The analyte has been “tentatively identified” or “presumptively” as present.  |
| B | The result is presumed a blank contaminant. This qualifier is used for drinking water samples only.   |
| C | The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatography/Mass Spectrometry (GC/MS). This qualifier may be added to other qualifiers. |
| X | The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed. This qualifier may be added to other qualifiers.                |
