**Subject: Final Expanded Site Inspection Report  
Norwood Landfill Site  
EPA Contract No.: 68-HE-0320-D0003  
EPA Technical Direction Document No.: T603-20-07-004  
Document Tracking No.: 0222\_Rev4**

Dear Mr. Vitello:

The Tetra Tech, Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) is submitting the enclosed revised Final Expanded Site Inspection (ESI) Report for the Norwood Landfill Site. The ESI report was revised in accordance with additional comments received from the EPA Toxicologist on October 18, 2021 and in accordance with discussions regarding the comments with the EPA Site Assessment Manager. This report summarizes the assessment activities conducted at the Site from September to December 2020 by Tetra Tech under EPA Contract No. 68-HE-0320-D0003 (START VI, Region 3), Technical Direction (TD) No. T603-20-07-004.

If you have any questions regarding this report, please contact me at (b) (4) (mobile), or (b) (4)

Sincerely,

(b) (4)

(b) (6)

## 1.0 INTRODUCTION

Under the Superfund Technical Assessment and Response Team (START) Contract No. 68-HE-0320-D003, Technical Direction (TD) No. T603-20-07-004, the U.S. Environmental Protection Agency (EPA) Region 3 tasked Tetra Tech, Inc. (Tetra Tech) to conduct an Expanded Site Inspection (ESI) in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) for the Norwood Landfill Site (the Site) located in Norwood, Delaware County, Pennsylvania (**Figure 1**).

The Norwood Landfill ESI is being conducted in accordance with EPA *Guidance for Performing Site Inspections Under CERCLA* (Reference [Ref.] 1). The purpose of this ESI is to collect sufficient information concerning the conditions at the Site to assess the relative threat posed to human health and the environment by actual or potential release of hazardous substances attributable to the Site and to determine the need for additional action under CERCLA based on criteria set forth in EPA's Hazard Ranking System (HRS) Final Rule (Ref. 2). The HRS model is a screening tool used to determine whether a Site meets the criteria requirements to be considered for the National Priorities List (NPL), which is EPA's list of Sites warranting federal interest. The scope of the ESI includes multi-media sampling and analysis and a screening level human health and ecological risk assessment.

## 2.0 SITE BACKGROUND

This section describes the Site location, presents a description of the Site, and summarizes the Site's history and characteristics.

### 2.1 SITE LOCATION AND DESCRIPTION

The Norwood Landfill Site is located in Norwood, Delaware County, Pennsylvania (**Figure 1**). The Site is located in an urban residential area within the flight path of the Philadelphia International Airport, which is located approximately 1.5 miles south-southeast. The Site is bordered by Muckinipattis Creek to the east; by the Historic Morton Morton House, and Darby Creek to the south, with the John Heinz National Wildlife Refuge beyond; and a residential area to the west (**Figure 2**). Norwood Park and Norwood Elementary School border the Site to the north-northeast and northwest. A public fishing dock is located on the Muckinipattis Creek.

The Site encompasses three areas of concern: (1) Old Norwood Dump; (2) the former Norwood Sanitary Landfill; and (3) the lower Norwood neighborhood (Winona Homes) constructed during the 1950s (**Figure**

2). The geographic coordinates of the approximate center of the Winona Homes neighborhood (Winona Homes) are 39.882156 north latitude and -75.2914 west longitude.

An area of concern that is not evaluated as part of the ESI is the former Muckinipates Wastewater Treatment Plant (WWTP). The WWTP was located to the north-northeast of the Old Norwood Dump and operated from sometime prior to 1957 until it was demolished in the early 1980s. Historically, raw sewage was deposited in a flat field adjacent to the plant. The former WWTP and adjacent sewage field are inaccessible to the public and enclosed within a locked and gated chain link fence with barbed wire. Due to the inaccessibility of this area to the public, this area was not investigated as part of this ESI as a potential human health risk.

## 2.2 SITE OWNERSHIP AND HISTORY

The majority of the Site and areas of concern are owned by the Borough of Norwood (the Borough), with the remaining areas consisting of privately owned residential properties. Based on a review of available information including historic newspaper clippings and Borough meeting minutes and historical aerial photos (**Attachment 1**), approximately 10 acres of land directly south of Norwood Park was used as an unpermitted Borough-sanctioned dump (Old Norwood Dump) from approximately 1950 to 1959. The Old Norwood Dump was used by residences in the Borough for the disposal of household waste and trash. From 1959 to 1961, the Old Norwood Dump and an additional 15 acres of land located immediately to the south of Winona Homes and along Darby Creek were used as a permitted sanitary landfill to dispose of municipal solid waste collected in the City of Philadelphia by an operator with a contract with the Borough. Several fires had reportedly occurred at the dump and subsequent landfill. The dirt roads leading to and from the landfill were periodically sprayed with oil for dust suppression and the landfill was periodically sprayed for insects and rodents. Official landfilling activities ceased in 1961, however unauthorized dumping occurred until 1963 when a final soil cover was placed on top of the landfill (Refs. 33 and 34).

In August 2016, EPA learned that several current and former residents of the Borough had sought assistance from state environmental and health agencies to investigate whether illnesses in their community could have been caused by contamination from the Old Norwood Dump and the Norwood Sanitary landfill. Specifically, residents were concerned about reports of cancer and auto-immune diseases. Additionally, residents were also concerned with the potential for disposal of material from the nearby Glenolden Laboratories (subsequently Merck, Sharp, and Dohme Pharmaceutical Laboratories), as well as other unregulated and unpermitted dumping in and on the landfills over time.

Another concern reported by a resident is the alleged use of fill in Winona Homes from an unknown source. Allegedly the fill was generated during the construction activities of the Walt Whitman bridge in Philadelphia, Pennsylvania. The areas beneath the Walt Whitman bridge on the north side, became the Publicker Superfund Site and therefore residents became concerned that if fill material from the bridge construction was transported to Norwood, that the soil could have been impacted by contaminants at that Site. Additionally, areas on and around the approach to the Walt Whitman bridge prior to its construction were historically known to be landfill, raising concern the soil was impacted by unknown hazardous substances. Because the origin of the fill material has not been confirmed, there is a potential it may contain hazardous substances.

### 2.3 PREVIOUS INVESTIGATIONS

In 1993, the U.S. Fish and Wildlife Service (USFWS) conducted a Level I Contamination Survey (a non-sampling property evaluation) on land located between the residential neighborhoods, including Winona Homes, and Darby Creek as part of a potential property purchase associated with the John Heinz National Wildlife Refuge. The Level I Contamination Survey noted debris was scattered across a portion of one of the parcels. Observed debris included glass jars and bottles, automobile frames and parts, aluminum siding, asphalt, concrete, and tires. USFWS determined that one of the surveyed parcels included areas of the former Norwood Sanitary Landfill (Ref. 3). The other parcel, to the west of the landfill, is privately owned by the Darby Realty Company and consists primarily of tidal wetlands. No prior use of this parcel was identified by USFWS (Ref. 3).

In 1999, the USFWS conducted a Level II Survey (a sampling evaluation) of the parcels, during which test pits were excavated and samples of soil (21 shallow and 17 deep), sediment (7), surface water (6), and groundwater (10) were collected (Ref. 3). No background samples were collected as part of the investigation. Because the sample analytical results from this investigation are over 20 years old, the analytical results do not reflect current conditions of the Site. Therefore, an in-depth discussion of the analytical results is not presented. The investigation is summarized to provide a complete investigative history of the Site. Samples were analyzed for target compound list (TCL) volatile organic compounds (VOC), TCL semivolatile organic compounds (SVOC), TCL pesticides, polychlorinated biphenyls (PCB), chlorinated herbicides, target analyte list (TAL) metals (total and dissolved for groundwater samples), and cyanide. Analytical results were compared to EPA's Region 3 Risk-Based Concentrations (RBCs), which are now known as Regional Screening Levels (RSLs) for soils (residential and industrial), sediment, groundwater (tap water) and surface water.

The Level II Survey indicated VOCs were not detected in any of the soil, sediment, or surface water samples above RBCs. One VOC (chloroform) was detected above the RBC in one groundwater sample. Several SVOCs were detected above RBCs in the soil, sediment, and groundwater samples, and in one surface water sample. Pesticides were not detected above RBCs in the surface water or sediment samples; however, one pesticide (chlordane) was detected above the RBC in one of the soil samples. Concentrations of PCBs were detected above RBCs in several soil samples, but did not exceed RBCs in the sediment, surface water, or groundwater samples. Manganese was the only TAL metal that exceeded RBCs in the surface water samples; however, several inorganic analytes were detected above RBCs in the soil, sediment, and groundwater samples (Ref. 3).

The Level II Survey identified several constituents that were detected in all media at concentrations that exceeded the screening levels used for comparison purposes. However, it was noted that many of the constituents could be related to natural conditions in the area; the impacts from runoff from nearby properties and streets; and/or from nonhazardous materials previously disposed of on the property. Considering the anticipated land use and infrequent transient visitors, it was determined that concentrations of constituents found may not be expected to have a negative impact to human health (Ref. 3).

In August 2016, EPA received complaints from concerned citizens within Winona Homes regarding the historical use of the nearby and adjacent Norwood Sanitary Landfill, as well as the use of potentially contaminated soil used as fill during construction of the housing development. Residents requested that EPA conduct an investigation to determine whether hazardous substances may be present on the Site (Ref. 4).

In September 2017, EPA conducted a CERCLA Site Inspection (SI) of the Norwood Landfill Site. As part of the SI, 20 surface (0- to 6-inches below ground surface [bgs]) soil and nine subsurface (24- to 48-inches bgs) soil samples, including one duplicate surface soil sample, two background surface soil samples, and one background subsurface soil sample were collected. Soil samples were collected from non-residential areas including the right-of-way between the homes along E. Winona Avenue and W. Martin Lane and throughout the wooded area south of Winona Homes adjacent to Darby Creek (**Appendix D, Figure 3**). Samples were not collected from residential properties as part of this sampling event. Surface soil samples were collected directly behind Winona Homes to determine whether fill material used during the construction of the neighborhood may have contained contaminants at concentrations that may pose a risk to human health. The subsurface soil samples were collected to determine whether landfill material was present below the surface in the area directly behind Winona Homes. Debris and/or landfill material was generally not observed in the subsurface soil samples, with the exception of glass debris at one location (Ref. 5).

Analytical results for six surface soil samples indicated VOCs, primarily acetone and methylene chloride, were detected at concentrations above background. However, they did not exceed applicable EPA RSLs for residential soil. Surface soil samples contained low levels of SVOCs, which is expected as there are many sources of SVOCs in urban areas such as asphalt and automobile fluids and emissions. Proximity of the neighborhood to Interstate I-95 and the flight path of airplanes at Philadelphia International Airport may also contribute to aerial deposition of SVOCs. In the Winona Homes neighborhood, many houses have asphalt shingle roofs in front and flat built-up roofs at the rear, which typically consists of asphalt and coal tar that can cause SVOCs to run off via downspouts into the yard. Most driveways in the neighborhood are asphalt, some of which are seal coated containing components like bitumen (another source of SVOCs) and slope towards backyards. Additionally, backyards were observed with outdoor grills and firepits, which are a source of SVOCs through the burning of charcoal and wood that can deposit ash onto the ground surface. The following constituents were detected in surface soil at concentrations above background and applicable EPA RSLs: benzo(a)anthracene in two samples; benzo(b)fluoranthene, benzo(a)pyrene, and indeno(1,2,3 cd)pyrene in one sample; PCBs in two samples; the pesticide dieldrin in one sample; and metals cobalt and manganese in one sample. Analytical summary tables for the sampling event are provided in **Appendix D, Tables 1 through 6**.

Two subsurface soil samples contained VOCs at concentrations above background but below applicable EPA RSLs for residential soil. The following constituents were detected in subsurface soil samples at concentrations above background and at or above applicable EPA RSLs: benzo(a)pyrene in five samples; dibenzo(a,h)anthracene in three samples; the pesticides dieldrin and aldrin in one sample; manganese in one sample; and lead in two samples. PCBs were not detected at elevated concentrations in the subsurface soil samples. Low levels of pesticides were detected in the majority of the subsurface soil samples below EPA RSLs (Ref. 5).

In Spring of 2018, EPA mailed letters to approximately 37 residences along E. Winona Avenue, as well as to residents living along Essex Road, Love Lane, Martin Lane, and Mohawk Avenue who expressed interest in having their property sampled. EPA gained access to 21 residential properties to collect soil samples. In May 2018, EPA collected 23 surface soil (0- to 12-inches bgs) samples from the 21 residential properties, including two duplicate soil samples (Ref. 5) (**Appendix D, Figure 3**).

Analytical results of the residential surface soil samples indicated that VOCs in nine samples were detected at concentrations above background but not exceeding EPA RSLs for residential soil. The following SVOCs were detected in surface soil at concentrations above background and at or above applicable EPA RSLs: benzo(a)anthracene, benzo(b)fluoranthene, benzo(a)pyrene, and indeno(1,2,3-cd)pyrene in three samples;

PCBs in one sample; the pesticide dieldrin in one sample; and metals antimony and lead in one sample (Ref. 5). Analytical summary tables for the sampling event are provided in **Appendix D Tables 7 through 9**.

In August 2019, EPA received additional information from a concerned resident about areas in Lower Norwood that were not sampled or evaluated but they believed were subject to historic landfilling or placement of contaminated soil. EPA reviewed the information and verified that an approximate 10-acre area located immediately east of Norwood Park was used as an unregulated town dump for at least a 10-year period of time in the 1950's. EPA then determined additional sampling was necessary in this newly identified area to ensure a complete and thorough assessment of all areas where members of the public could potentially come in contact with unknown hazardous substances and to determine whether a release of hazardous substance from the Dump had impacted the adjacent Muckinipattis Creek. EPA also pledged to concerned residents that it would undertake a larger residential soil sampling effort and attempt to fill any other data gaps by sampling various media and locations throughout Lower Norwood in effort to determine over a larger area whether Winona Homes was built on contaminated soil.

Delayed by the COVID-19 pandemic, EPA postponed the planned first quarter of 2020 sampling until September 2020, completing all ESI activities the first week of December 2020.

## 2.4 SITE CHARACTERISTICS

This section describes the Site's physical characteristics such as geography, proximity to surface water, soils and geology underlying the Site, groundwater and hydrogeology, and the meteorological conditions at the Site.

### 2.4.1 Physical Geography

The Site is located in the Lowland and Intermediate Upland Section of the Atlantic Coastal Plain Physiographic Province, which is characterized by a flat upper terrace surface underlain by unconsolidated to poorly consolidated sand and gravel with dendritic drainage patterns (Ref. 6). As shown on **Figure 1**, topography in the vicinity of the Site is generally flat-lying or gently sloping to the south toward Darby Creek.

### 2.4.2 Surface Water

The Site is bordered by Muckinipattis Creek to the east, which flows into Darby Creek at the southeast corner of the Site; and by Darby Creek to the south, which flows for approximately 2.25 miles to the west/southwest

before converging with the Delaware River. The Site is situated in the Darby Creek watershed and is part of the Delaware River Basin (Ref. 7). Both Darby Creek and Muckinipattis Creek are tidally influenced in the vicinity of the Site (Ref. 7). Portions of the Site consist of fully developed urban properties surrounded by undeveloped areas that are overgrown with brush and trees. Surface water runoff in the developed portions of the Site most likely flows to storm drains along E. Winona Avenue and Essex Road. The ground surface is relatively flat near the Site; surface water runoff in the undeveloped portions of the Site would most likely percolate into the ground or run off into Darby Creek to the south or Muckinipattis Creek to the east. The southern portion of the Site lies within a 100-year flood zone (Ref. 8).

### **2.4.3 Geology**

The Site is located in the Lowland and Intermediate Upland Section of the Atlantic Coastal Plain Physiographic Province, which is characterized by a flat upper terrace surface (Ref. 6). The Site is underlain by the Quaternary Age unconsolidated deposits classified as Trenton gravel, which consists of gray or pale-reddish-brown, gravelly sand interstratified with cross bedded sand and clay/silt beds. The unit also includes areas of alluvium and swamp deposits. The Trenton gravel deposits are generally less than 20 feet thick; however, the unit may be as thick as 50 feet locally (Ref. 9).

In the vicinity of the Site, the Wissahickon Formation underlies the Trenton gravel deposits. The Wissahickon Formation consists of dark to light gray, well-foliated schist and gneiss, having some quartz and feldspar-rich layers (Ref. 9). The Wissahickon Formation was originally sediment of variable thickness and composition. The original sediments have been completely recrystallized by metamorphism. The formation is highly variable in composition and degree of metamorphism. Its thickness is estimated to be 5,000 to 8,000 feet (Ref. 9).

### **2.4.4 Soils**

A majority of the soil in the vicinity of the Site is characterized as Made Land - gravelly material, which is composed primarily of udorthents, shale, and sandstone, and is classified as well drained with moderately low to high capacity to transmit water (Ref. 10).

Soil characterized as tidal marsh is located in the southern portion of the Site. Tidal marsh consists of Chicone and similar soils and is classified as very poorly drained with moderately high to high capacity to transmit water (Ref. 10)

### 2.4.5 Groundwater and Hydrogeology

Groundwater flow in the Atlantic Coastal Plain Physiographic Province is through intergranular (i.e., primary) openings, under either unconfined or confined aquifer conditions (Ref. 11). The depth to groundwater ranges from 0.1- to 15-feet bgs at the Site and is encountered in the unconsolidated deposits of the Trenton gravel. This shallow depth to water is related to the proximity of the Trenton gravel to the Delaware River, which is interconnected with the Trenton gravel water table. The water table in Delaware County near the Delaware River estuary fluctuates in response to tides. The amplitude of these fluctuations decreases with distance from the estuary. Tidal effects are most pronounced in the Trenton gravel, which can transmit gradient changes over long distances because of high hydraulic conductivity (Ref. 9). For the purposes of this ESI, it is assumed that the Delaware River is a hydrologic boundary.

The Trenton gravel is discontinuous in extent and variable in depth and poorly sorted. The wide range in grain size causes the hydrologic properties to vary considerably. In many areas, the deposits are too thin to yield much water to wells over a sustained period, but they do provide temporary storage of water that recharges the underlying units. Measured specific capacities of wells in the Trenton gravel range from 1.3 to 2.6 gallons per minute per foot (gpm/ft) (Ref. 9).

Underlying the Trenton gravel is the Wissahickon Formation, which is the most productive of the water-bearing rock units in Delaware County. Water is present in joint planes and locally in fault planes. Groundwater occurs mainly in the weathered zone above bedrock and in bedrock fractures to depths of about 300-feet bgs. The reported depths of wells in the Wissahickon Formation range from 43- to 675-feet bgs; the median is 187-feet bgs. The specific capacities of wells in the Wissahickon Formation range from 0.004 to 2.9 gpm/ft., and the median is 0.2 gpm/ft. Most of the water-bearing zones are penetrated within 300-feet bgs (Ref. 9).

### 2.4.6 Meteorology

The National Weather Service annual climatological report for Mount Holly, New Jersey (closest station to Site) shows a mean annual temperature of 58 degrees Fahrenheit (°F) (Ref. 12). The Philadelphia area has an average annual precipitation of 41.53 inches (Ref. 13).

### 3.0 PATHWAY CHARACTERIZATION

This section characterizes the source(s) associated with the Site and describes the pathways of concern, including potential targets associated with each pathway of concern.

#### 3.1 SOURCE CHARACTERIZATION

For HRS purposes, a source is defined as an area where a hazardous substance has been deposited, stored, or placed, as well as those soils that have become contaminated from the migration of a hazardous substance.

Three possible sources have been identified at the Site as shown on **Figure 2**:

- Source 1:** Potentially contaminated soil associated with the former Old Norwood Dump and the former Norwood Sanitary Landfill.
- Source 2:** Potentially contaminated soil in an undeveloped area associated with the former Norwood Sanitary Landfill.
- Source 3:** Potentially contaminated soil used to level the ground surface (fill) in the Winona Homes neighborhood. The fill is allegedly from the excavation for construction of the Walt Whitman Bridge.

As discussed in **Section 2.3**, prior analytical results for several surface and subsurface soil samples collected from former Norwood Sanitary Landfill and Winona Homes document the presence of substances at concentrations above background, including VOCs, SVOCs, pesticides, PCBs, and inorganics, with some concentrations above applicable EPA RSLs for residential soil. However, the analytical results did not identify a widespread contiguous area of contamination or a specific source of contamination. Source samples have not previously been collected from the former Old Norwood Dump area.

#### 3.2 GROUNDWATER MIGRATION PATHWAY

The Groundwater Migration Pathway is not considered a significant pathway of concern at the Site because groundwater is not used for drinking water within a 4-mile radius of the Site. Potential groundwater targets can include persons who obtain drinking water from private domestic wells within the 4-mile radius target distance limit (TDL) of the Site and persons supplied drinking water from public water suppliers whose water source is from groundwater wells within the 4-mile TDL. The primary public water supplier serving persons within a 4-mile TDL is Aqua Pennsylvania Water Company (Aqua Pennsylvania). The primary sources of water for Aqua Pennsylvania include eight surface water intakes and 28 groundwater wells (Refs. 15 and 16). There are no supply wells for Aqua Pennsylvania located within the 4-mile TDL; therefore, persons served through this supply network are not considered targets as part of this SI (Ref. 17).

Based on the Pennsylvania Groundwater Information System (PaGWIS) database search, there are no public supply wells within the 4-mile TDL; however, nine domestic wells were identified within the 4-mile radius TDL, as shown in **Figure 3** (Ref. 17). The majority of the wells appear to be owned by businesses, and one well is owned by Upper Darby Township (Ref. 17). Upper Darby Township is supplied potable water by the Aqua Pennsylvania main system; therefore, the use of the well identified in PaGWIS as domestic is not expected to be a drinking water well (Refs. 17 and 18). Additionally, Upper Darby Township was not listed in the Pennsylvania Drinking Water Reporting System as a public water supplier (Ref. 19). The wells identified in PaGWIS range in depth from 95 feet to 600 feet. One well is completed in the Trenton gravel. The remainder of the wells are completed in the Wissahickon Formation, Pennsauken Formation, or the Gabbro/Gabbroic Gneiss Formation. Using the U.S. Census Bureau persons-per-household value of 2.65 for Delaware County, approximately 24 persons rely on private domestic wells within the 4-mile TDL (Ref. 20). Persons within a 4-mile radius of the Site in New Jersey who may rely on groundwater for potable use are not considered potential targets because the Delaware River is assumed to be a regional hydrologic boundary.

The table below provides a summary of domestic wells within 4 miles of the Site and the population served.

| Radial Distance (miles) | Domestic Wells | Population Served | Public Supply Wells | Population Served | Total Population Served |
|-------------------------|----------------|-------------------|---------------------|-------------------|-------------------------|
| 0.00 to 0.25            | 0              | 0                 | 0                   | 0                 | 0                       |
| 0.25 to 0.50            | 0              | 0                 | 0                   | 0                 | 0                       |
| 0.50 to 1.0             | 0              | 0                 | 0                   | 0                 | 0                       |
| 1.0 to 2.0              | 0              | 0                 | 0                   | 0                 | 0                       |
| 2.0 to 3.0              | 4              | 11                | 0                   | 0                 | 11                      |
| 3.0 to 4.0              | 5              | 13                | 0                   | 0                 | 13                      |
| <b>Total</b>            | <b>9</b>       | <b>24</b>         | <b>0</b>            | <b>0</b>          | <b>24</b>               |

(Refs. 17 and 20)

Due to the lack of groundwater targets, the Groundwater Migration Pathway is not a pathway of concern at the Site.

### 3.3 SURFACE WATER MIGRATION PATHWAY

#### 3.3.1 Drinking Water Component

The primary public water supplier near the Site is Aqua Pennsylvania, which obtains its source water from eight surface water intakes and 28 groundwater wells that provide drinking water to approximately 820,000 persons in Montgomery, Chester, and Delaware Counties (Ref. 16). None of the surface water intakes are located along the 15-mile TDL for the Site, as shown on **Figure 4** (Ref. 17); therefore, persons served through this supply network are not potential targets associated with the surface water migration pathway.

For this reason, the Surface Water Migration Pathway – Drinking Water Threat component is not a pathway of concern because surface water is not used for drinking water within 15 miles downstream of the Site.

### 3.3.2 Human Food Chain Component

According to the Pennsylvania Fish and Boat Commission, there are three access points for boats along the 15-mile TDL, one on Darby Creek and two on the Delaware River (Ref. 21). Additionally, there is a floating dock on the Muckinipattis Creek just above its confluence with Darby Creek. Based on the presence of several access points to the waterways at and near the Site, it is assumed that recreational fishing (and possibly fishing for consumption) occurs within the 15-mile TDL. Additionally, fishing line was observed in several of the sediment sample ponar grabs during the September 2017 sampling event. The Human Food Chain Component of the Surface Water Migration Pathway is a pathway of concern because of the potential for human consumption of fish caught within the Muckinipattis and Darby Creeks.

### 3.3.3 Environmental Component

As shown in **Figures 1 and 2**, John Heinz National Wildlife Refuge is located along Darby Creek across from the Site. John Heinz National Wildlife Refuge consists of a freshwater tidal marsh that encompasses roughly 285 acres (Ref. 22). The tidal portion of Darby Creek and its side channels flow through the refuge and tidal marsh. Darby Creek is known to support a diversity of estuarine fish species such as killifish and mummichogs. Anadromous fish, such as the blueback herring and alewife, use tidal streams and rivers like Darby Creek and its side channels as nursery habitat for juveniles. The American eel, the only catadromous fish species in Atlantic Coast estuaries, spends most of its adult life in freshwater and is common in tidal creeks, rivers, and marsh channels. Waterfowl, like the American black duck, lesser scaup, and northern pintail, as well as shorebirds, like black-bellied plover, greater yellowlegs, and semipalmated sandpiper, also utilize open water habitats along Darby Creek for migratory stopovers (Ref. 22).

State endangered species such as the least bittern (*Ixobrychus exilis*) are known to breed at the refuge. Other Pennsylvania endangered species that have been observed at the refuge during migration, but are considered occasional or rare in abundance, include the yellow-crowned night-heron (*Nyctanassa violacea*), common tern (*Sterna hirundo*), black tern (*Chlidonias niger*), king rail (*Rallus elegans*), short-eared owl (*Asio flammeus*), and loggerhead shrike (*Lanius ludovicianus*). The king rail historically nested at the Site (prior to 2000). The federally endangered piping plover (*Charadrius melodus*), listed as extirpated in Pennsylvania, is an occasional “accidental” occurrence during migration. Bald eagles (*Haliaeetus leucocephalus*), a former federally listed endangered species that has recovered and been delisted, have historically utilized the refuge for hunting and roosting. The first known bald eagle nest on the refuge was built in 2009 and the first two

refuge eaglets successfully hatched in 2010. The pair has returned to breed on the refuge every year since (Ref. 22). The refuge also supports several rare species of turtle such as the state-endangered eastern mud turtle (*Kinosternon subrubrum*), the northern diamond-backed terrapin (*Malaclemys terrapin*), and a significant population of the state-threatened eastern redbelly turtle (*Pseudemys rubriventris*). Redbelly turtles are associated with the freshwater tidal marsh and open waters of Darby Creek. A state-endangered species, the southern coastal plain leopard frog (*Lithobates sphenoccephalus utricularius*), is known to inhabit and breed at the refuge in shallow open water and in isolated vernal pools (Ref. 22). In addition to the federally or state-listed threatened or endangered species observed at John Heinz National Wildlife Refuge, three federally listed threatened or endangered species, the Atlantic sturgeon (*Acipenser oxyrinchus*), the bog turtle (*Glyptemys muhlenbergii*), and the sensitive joint-vetch (*Aeschynomene virginica*), are known to occur within Delaware County, along with more than 50 state-listed threatened and endangered species including the peregrine falcon (*Falco peregrinus*), the osprey (*Pandion haliaetus*), several additional birds, turtles, and many plants associated with wetland and marshy habitats (Ref. 23). Portions of the former Old Norwood Dump and Norwood Sanitary Landfill are immediately adjacent to areas classified as a freshwater emergent wetland and a freshwater forested/shrub wetland (**Figure 4**; Ref. 24). A total of approximately 14.04 miles of wetland frontage are located along Muckinipattis Creek (0.19 miles), Darby Creek (2.58 miles), and Delaware River (11.27 miles) along the 15-mile TDL in the Delaware River (Ref. 24). Because of the presence of sensitive environment, the Environmental Component of the Surface Water Migration Pathway is a significant pathway of concern.

### 3.4 SOIL EXPOSURE AND SUBSURFACE INTRUSION PATHWAY

#### 3.4.1 Soil Exposure Component

Three areas of possible surface soil contamination, Sources 1, 2, and 3, have been identified, as shown on **Figure 2**. Source 1 consists of the former Old Norwood Dump located east of Winona Homes and adjacent to the southern boundary of Norwood Park. Source 2 consists of the former Norwood Sanitary Landfill located south and west of Winona Homes. Source 3 includes Winona Homes where soil allegedly excavated during the construction of the Walt Whitman Bridge was used to level the ground surface for construction of the homes. Residents have concerns that the soil used as fill may be contaminated. Persons residing in the Winona Homes neighborhood are potential targets located on and within 200 feet of possible surface soil contamination. No schools or daycare centers are located on the Site or within 200 feet of possible source areas. Norwood Park is located approximately 1,000 feet northeast of the Site. Norwood Elementary School is located approximately 1,700 feet to the northwest.

As discussed in **Sections 2.3** and **3.1**, prior analytical results for surface and subsurface soil samples collected from the former Norwood Sanitary Landfill and Winona Homes document the presence of substances, including VOCs, SVOCs, pesticides, PCBs, and inorganics at concentrations above background. However, the analytical results did not identify a widespread contiguous area of contamination or a specific source of contamination. Portions of Source 1, former Old Norwood Dump, are restricted by a locked chain link fence around the Delaware County Regional Water Authority (DELCORA) pumping station property. The remainder of Source 1 and Source 2, former Norwood Sanitary Landfill, is unrestricted wooded areas with no designated recreational use. However, recent use was indicated during sampling based on observation of discarded food wrappers and bottles. Because three areas of possible surface soil contamination are located within 200 feet of residential homes, the Soil Exposure Component of the Soil Exposure and Subsurface Intrusion Pathway is of significant concern.

### **3.4.2 Subsurface Intrusion Component**

A complete vapor intrusion pathway consists of five elements: (1) a subsurface source of vapor-forming chemicals is present beneath and near a building; (2) vapors form and have a route to migrate toward the building; (3) the building is susceptible to soil gas entry, which means openings exist for the vapors to enter the building; (4) vapor-forming chemicals comprising the subsurface vapor source are present in the indoor environment; and (5) the building is occupied when these chemicals are present indoors (Ref. 26).

Based on previous soil sampling analytical results, subsurface source(s) of vapor-forming chemicals was not identified at the Site; therefore, the Subsurface Intrusion Component of the Soil Exposure and Subsurface Intrusion Pathway is not of significant concern.

## **3.5 AIR MIGRATION PATHWAY**

The majority of the possible source areas are covered with grasses, shrubs, and trees; grassed residential yards; and impervious surfaces such as streets and houses. Therefore, the likelihood of a release to air is low. Therefore, the Air Migration Pathway is not considered a significant pathway of concern.

## 4.0 FIELD ACTIVITIES

### 4.1 ACCESS

EPA Site Assessment Manager obtained signed access agreements from property owners for the collection of surface and subsurface soil samples, installation of temporary monitoring wells, and collection of surface water and sediment samples. The EPA has maintained custody of the signed access agreements.

### 4.2 SITE RECONNAISSANCE

On August 18, 2020, Tetra Tech met with the EPA Site Assessment Manager and representatives of the Borough of Norwood and their environmental consultant to conduct a Site reconnaissance to identify soil boring locations within the non-residential areas to be sampled. Locations included Norwood Park, former Norwood Sanitary Landfill, and the former Old Norwood Dump. The area encompassing former Norwood Sanitary Landfill and the portion of the former Old Norwood Dump outside of the current DELCORA pumping station are heavily wooded areas. Household trash and construction debris (concrete pieces, chunks of asphalt, etc.) were observed throughout the landfill area. Ground surface was very uneven. The non-residential soil boring locations as well as the list of residential properties where soil borings will be installed were provided to PA One Call by the Tetra Tech subcontracted driller for clearance of underground utilities at the proposed locations. Additionally, on September 28, 2020, Tetra Tech was on-site with a subcontracted private utility clearance to clear and mark each non-residential soil boring and monitoring well location using ground penetrating radar. The private utility clearance of the residential properties was conducted on November 11, 2020.

### 4.3 SI SAMPLING EVENT

The SI field work, which included the collection of surface and subsurface soil samples, groundwater samples from temporary monitoring wells, and surface water and sediment samples from Muckinipattis Creek, was conducted in accordance with the following EPA-Field Sampling Plans: Norwood Landfill – Non-Residential Field Sampling Plan prepared by Weston Solutions, Inc. (Ref. 27), the Norwood Landfill – Residential Field Sampling Plan by Tetra Tech (Ref. 28) as well as in accordance with START 6 *Uniform Federal Policy Program Quality Assurance Project Plan* (UFP-QAPP) (Ref. 29) and EPA Contract Laboratory Program (CLP) method requirements. Field Logbook Notes documenting Site observations and sample collection activities are provided in **Appendix A**.

### 4.3.1 Source Characterization Sampling

To characterize possible source areas at the Norwood Landfill Site, soil samples were collected from the three AOCs from September through November 2020. Additionally, soil samples were collected from Norwood Park and other neighborhoods surrounding Winona Homes for background comparison. Source sampling locations and sampling activities are discussed in the following sections.

#### 4.3.1.1 Non-Residential Soil Sampling

In September 2020 and October 2020, a total of 42 surface (0- to 1-foot bgs) and subsurface (2- to 20-foot bgs) soil samples were collected from 30 soil borings installed within the footprint of the former Old Norwood Dump, the former Norwood Sanitary Landfill, Norwood Park, and within a right-of-way within Winona Homes to characterize soil. Additionally, four soil samples were collected from two borings, one in Norwood Park and one on Borough owned property approximately 0.5-mile north of the Site, installed at locations beyond areas assumed to have not been impacted by fill or landfilling activities. Soil/Source sample locations are shown on **Figure 5**; a description of the soil boring locations and collected samples are provided in **Table 1**; and Soil Boring Logs are provided in **Appendix B**.

A DPT drill rig was used to install the soil borings at all but five locations. Soil samples collected at sample locations SB-40 through SB-44 in the former Norwood Sanitary Landfill were collected with a stainless-steel hand auger because the area was not accessible with a drill rig due to heavy brush and vegetation. At each location, the soil borings were screened with a photoionization detector (PID) for VOCs, a Geiger counter for radioactivity, and lithology was noted on the soil boring logs. Soil samples were collected directly from the borings with an encapsulating soil coring sampling device for VOCs. Collected samples were immediately placed on ice and shipped on a daily basis to the assigned CLP laboratory. Remaining soil was placed in a disposable aluminum pan and homogenized prior to placing into the appropriate sample container for remaining analyses.

#### **Former Old Norwood Dump**

Eleven soil borings were installed in or adjacent to the former Old Norwood Dump with a total of 20 surface and subsurface soil samples collected (**Figure 5**), including one surface and one subsurface duplicate sample. At one location (SS/SB-36), three boring were installed approximately 10 feet apart in a transect beginning closest to the residences and extending into the dump area. The purpose of the transect was to delineate the edge of the dump area. In accordance with the approved Field Sampling Plans (FSP), as no visible contamination was observed in the borings or no elevated VOC readings on the PID were observed, samples

were only collected from one of the three borings, SS/SB-36B; on the unpaved access road that runs behind the residences. Borings ranged in depth from 10- to 20-feet bgs. Borings terminated below 20 feet were due to encountering refusal.

Concrete pieces were observed at boring locations SS/SB-28 and SS/SB-29 at approximately 3-feet bgs. Trash and glass were observed at location SS/SB-36A at approximately 5-feet bgs and trash and concrete were observed at the surface and at 2.5-feet bgs at locations SS/SB-36C and SS/SB-36B, respectively. VOCs were not observed on the PID at any boring location.

### **Former Norwood Sanitary Landfill**

Fourteen soil borings were installed along the perimeter and into the landfill with a total of 18 surface and subsurface soil samples collected (**Figure 5**). At three locations (SS/SB-37, SS/SB-38, and SS/SB-39), three borings were installed approximately 10 feet apart in a transect beginning closest to the residences and extending into the dump area using DPT. The purpose of the transect was to delineate the edge of the dump area. In accordance with the approved FSP, as no visible contamination was observed in the borings or elevated VOC readings on the PID, samples were only collected from one of the three borings from transects 37 and 38 at locations SS/SB-37A and SS/SB-38A; the borings closest to the residences. However, at transect 39, surface and subsurface soil samples were collected from two borings, SS/SB-39A, closest to residences on the unpaved access road that runs behind the residences; and at SS/SB-39C, the furthest location into the former landfill. Borings ranged in depth from 2- to 15-feet bgs. Borings were terminated below 20-feet due to encountering refusal. As five locations (SS/SB-40, SS/SB-41, SS/SB-42, SS/SB-43, and SS/SB-44) in the landfill area were inaccessible for the drill rig, samples were collected using a stainless-steel hand auger. Hand auger borings were advanced to approximately 3-feet bgs.

Asphalt and concrete pieces were observed at boring location SS/SB-38B at approximately 0.5- to 1.5-feet bgs. At location SS/SB-39B, concrete pieces were observed at approximately 5- to 5.5-feet bgs and trash, glass, and plastic at 8.5- to 11-feet bgs. Trash and cinders were observed at location SS/SB-41, from approximately 3-inches to 3-feet bgs. Trash, glass, and plastic were also observed at locations SS/SB-42, SS/SB-43, and SS/SB-44 at approximately 5-feet bgs and trash and concrete were observed at the surface and at 2.5-feet bgs at locations SS/SB-36C and SS/SB-36B, respectively. VOCs were not observed on the PID at any boring location.

### **Norwood Park and Winona Homes Right-of-Way**

Two soil borings (SS/SB-23 and SS/SB-24) were installed in the southeast of Norwood Park. One soil boring (SS/SB-25) was installed in the approximate center of Winona Homes within a right-of-way. A total of six surface and subsurface soil samples were collected (**Figure 5**). The boring locations in Norwood Park were to determine if the former Old Norwood Dump could have previously extended that far north. Borings ranged in depth from 10- to 17-feet bgs. Borings were terminated below 20-feet due to encountering refusal. No trash or other debris were observed in the borings. VOCs were not observed on the PID at any boring location.

### **Background Locations**

One soil boring (SS/SB-21) was installed on a portion of Borough property approximately 1,000 feet northwest of Winona Homes, and one soil boring (SS/SB-22) was installed at the northern end of Norwood Park, at locations believed to not have been impacted by past fill or landfilling activities to document background soil conditions. A surface and subsurface soil samples were collected from each boring (**Figure 5**). Borings ranged in depth from 13- to 20-feet bgs. Borings were terminated below 20 feet due to encountering refusal. No trash or other debris were observed in the borings. VOCs were not observed on the PID at any boring location.

#### **4.3.1.2 Residential Soil Sampling**

EPA contacted 228 residences through email and postcard notification mailings in effort to gain access to as many properties in Winona Homes and surrounding neighborhoods for participation in the residential sampling effort. In November and December 2020, a total of 187 soil samples were collected from 70 residential properties primarily within Winona Homes (57 properties). Soil samples were also collected from residential properties in surrounding neighborhoods for comparison (13 properties). At each of the 70 properties, two separate soil samples were collected: one a grab surface (0- to 0.5-foot bgs) soil sample and the second a five-point composite surface soil sample. The grab surface soil samples were collected to determine if contaminants at concentrations above background and at levels that may pose a risk to human health are present within the soil at depths that residents may come into dermal contact. Composite soil samples were collected in order to evaluate the presence of contaminants over the entire property that may be missed with a discrete grab sample. The subsurface soil samples were collected to determine whether landfill material was present below the surface in the residential areas and whether fill used during the construction of the neighborhood contained concentrations of contaminants above background and at levels that may pose a risk to human health. However, it is not anticipated that residents would come into regular

contact with soil below 2-feet bgs. Debris and/or landfill material was generally not observed in the subsurface soil samples, with the exception of glass debris, ash, and pieces of charred wood at one location, SB-128. At 19 of the 70 properties (15 properties within Winona Homes and four properties in surrounding neighborhoods), shallow subsurface (2- to 4-feet bgs) soil samples were collected using a hand auger. At 14 of the 70 properties (12 properties within Winona Homes and two properties in surrounding neighborhoods), a shallow subsurface (2- to 4-feet bgs) and a deep (8- to 10-feet bgs) soil sample was collected using DPT. At each location, the soil borings, both by hand auger and DPT, were screened with a photoionization detector (PID) for VOCs and lithology was noted on the soil boring logs. Low-level PID detections in parts per billion were noted in several of the borings. Residential soil sample locations are shown on **Figure 6**, a description of the soil sample locations are provided in **Table 2**, and the soil boring logs are provided in **Appendix B**.

### 4.3.2 Groundwater Sampling

Groundwater is not used as a drinking water source at the Site. Residents expressed concern that if their house was built on and in contaminated fill that groundwater can migrate into their homes during heavy rain events, thus potentially exposing them to contaminants. Therefore, groundwater samples were collected from temporary wells as discussed below to assess whether contaminants were present that could cause a vapor intrusion condition.

In October 2020, six temporary monitoring wells were installed at the Site; one in the center of the former Old Norwood Dump at soil boring location SS/SB-31 (GW-04); two along the southern boundary between Winona Homes and the former Norwood Sanitary Landfill at soil boring locations SS/SB-37a (GW-05) and SS/SB-39a (GW-06); one in the center of Winona Homes at boring location SS/SB-25 (GW-03); one in the northern portion of Norwood Park at location SS/SB-22 (GW-02) as a background; and one approximately 1,000 feet northwest of the Winona Homes neighborhood at soil boring location SS/SB/21 (GW-01) as a background. Monitoring well locations are shown on **Figure 5** and a description of the monitoring well locations, collected samples, and monitoring well construction is provided in **Table 1**. Monitoring well development and purge logs are provided in **Appendix C**.

The borings were converted to temporary monitoring wells using pre-packed 1-inch-diameter, 5- or 10-foot, 0.01-inch slotted polyvinyl chloride (PVC) screens and 0-graded sand. The temporary wells were developed to reduce sediment and turbidity. The depth to water was measured both prior to and following development. Approximately 24 hours to 5 days following installation, groundwater samples were collected from the monitoring wells. Depth to water measurements were recorded at each well prior to the start of sampling

activities. The monitoring well samples were collected using low-flow sampling techniques as stated in the approved FSPs. The pump intake was set at the approximate mid-point of the portion of the well screen below the measured water level in the well or at a minimum 2.5 feet below the water level within the well screen. Groundwater samples were collected directly into the appropriate sampling containers, placed on ice, and packaged and shipped to the assigned CLP laboratory for analysis. Collected groundwater samples were not filtered and were submitted for total metals analysis.

Immediately after installation, wells GW-02 and GW-05 were noted as dry. The wells were rechecked 24 hours later and were still dry. Thus, groundwater samples were not collected from these wells. During sampling, GW-03 purged dry within two to three minutes of purging and was allowed to recharge for approximately one hour at which time the groundwater sample was collected.

### 4.3.3 Surface Water Sampling

In October 2020, six co-located surface water and sediment samples were collected from Muckinipattis Creek, including at an upstream location from the former WWTP, to document background conditions (SW/SD-13). Two surface and sediment samples (SW/SD-14 and SW/SD-15) were collected adjacent to the former WWTP and two surface water and sediment samples (SW/SD-16 and SW/SD-17) were collected adjacent to the former Old Norwood Dump. A surface water and sediment sample were also collected adjacent to a floating dock used for fishing (SW/SD-18). Five additional sediment samples were collected from wetland areas. Samples SD-19 and SD-20 were collected in a wetland area adjacent to the former Old Norwood Dump and samples SD-21, SD-22, and SD-23 were collected in a wetland area adjacent to and downstream of the former Norwood Sanitary Landfill. Darby Creek and Muckinipattis Creek are tidal; therefore, an attempt was made to collect the surface water and sediment samples at low-tide or during an out-going tide to ensure there was no influence of contaminants migrating from downstream sources. The surface water and sediment samples are shown on **Figure 5** and the locations, time collected, and the high and low tides for each day are noted in **Table 3** (Ref. 30).

The surface water and sediment samples were collected in accordance with procedures outlined in the FSPs. At each sampling location, surface water was collected prior to collection of sediment to minimize sediment within the water column. Surface water was collected directly into the appropriate sample containers by submerging the container below the water surface, with the exception of samples collected for VOC analysis. Surface water for VOC analysis were collected by pouring collected water in a 1-liter amber jar into the pre-preserved volatile organic analysis vials. Collected sediment was placed in a disposable aluminum pan and the VOC fraction was collected in encapsulating coring sampling device. The remaining sediment was then

homogenized and placed into the appropriate sample containers, placed on ice, and submitted to the assigned CLP laboratory. Collected surface water samples were not filtered and were submitted for total metals analysis.

#### **4.3.4 Soil Exposure and Subsurface Intrusion Sampling**

The following sections discuss the soil exposure and subsurface intrusion sampling conducted as part of this ESI.

##### **4.3.4.1 Soil Exposure Sampling**

The soil exposure component of the Soil Exposure and Subsurface Intrusion pathway is the primary pathway of concern at the Site as a result of potentially contaminated soil used during construction of Winona Homes and contaminated soil associated with the former Old Norwood Dump and former Norwood Sanitary Landfill. Soil samples collected to evaluate the Soil Exposure Pathway are discussed in **Section 4.3.1**.

##### **4.3.4.2 Subsurface Intrusion Sampling**

The subsurface intrusion component of the Soil Exposure and Subsurface Intrusion pathway is not considered a primary pathway of concern at the Site based on the lack of volatile contaminants observed in soil samples collected during previous activities. Therefore, soil gas and indoor air samples were not collected as part of the SI; however, shallow groundwater samples were collected to determine if there were any volatile contaminants in groundwater that could possibly be originating from an unknown upgradient source which could cause a vapor intrusion condition for Winona Homes, as discussed in **Section 4.3.2**, which will be used evaluate the potential for vapor intrusion at the Site.

#### **4.3.5 QC Sampling**

Field and laboratory quality assurance/quality control (QA/QC) samples were collected in accordance with the approved Sampling Work Plans: Norwood Landfill – Non-Residential Field Sampling Plan prepared by Weston Solutions, Inc. (Ref. 27) and the Norwood Landfill – Residential Field Sampling Plan by Tetra Tech (Ref. 28) as well as in accordance with START 6 *UFP-QAPP* (Ref. 29) and EPA CLP method requirements. QC samples consisted of the collection of field duplicate samples, trip blank samples, and equipment rinsate blank samples of non-dedicated sampling equipment. EPA Region 3 does not require matrix spike/matrix spike duplicate (MS/MSD) samples for volatile analysis of soil and aqueous samples.

#### 4.3.6 Deviation from Sampling Plan

Two non-residential soil borings planned to be installed within the right-of-way within Winona Homes (SB-26 and SB-27) were not installed and soil samples were not collected at these locations. During the ground penetrating radar utility clearance survey, a large enough area could not be cleared at these locations to confidently install soil borings without encountering underground utilities. As additional soil sampling was planned on residential properties within the neighborhood, the EPA determined it was not essential that these samples be collected.

Groundwater samples were not collected from two of the six temporary monitoring wells because the wells were dry.

### 5.0 ANALYTICAL RESULTS

Samples were analyzed for TAL organics VOCs, SVOCs, polycyclic aromatic hydrocarbons (PAH) by Selective Ion Monitoring (SIM), PCBs, and pesticides and in accordance with EPA CLP Methods SOM02.4 and ISM02.4 for organics and inorganics, respectively. At the discretion of the EPA Work Assignment Manager (WAM), two soil samples (plus a duplicate) were also analyzed for dioxins/furans in accordance with EPA CLP High Resolution Superfund Methods HRSM01.2. Surface water and groundwater samples were analyzed using the Trace VOC method. Groundwater and surface water were unfiltered and were analyzed for total metals by Inductively Coupled Plasma-Mass Spectrometry (ICP-MS) and mercury was analyzed by cold vapor atomic absorption (CVAA). Metals for soil and sediment were analyzed for aluminum, calcium, iron, magnesium, potassium, and sodium by Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES) with the remaining metals analyzed by ICP-MS and mercury by CVAA. The data validation for all analytical data was performed by the EPA Region 3 Environmental Services Assistance Team (ESAT). Analytical data were validated according to the *National Functional Guidelines for Inorganic and Organic Superfund Methods Data Review* and applicable EPA Region 3 modifications. The data validation reports are included in **Attachment 3**.

Analytical summary tables for results detected above the reported detection limits (RDLs) (i.e., adjusted Contract Required Quantitation Limits [CRQLs] with respect to dilution factor and percent solids) are provided in **Tables 4** through **15**. The tables also reflect the concentrations of contaminants that were detected significantly above background concentrations (i.e., three times background levels). For the non-residential samples, the surface soil samples (0- to 1-foot bgs) were compared to the highest concentration detected in the two background samples (SS-21 and SS-22) and the subsurface soil samples were compared to the highest concentration detected in the subsurface background samples (SB-21 and SB-22). For the

residential samples, soil samples collected from Winona Homes were compared to the highest concentration detected in the applicable sample depth (i.e., composite, surface, shallow subsurface [2- to 4-feet bgs], and deep subsurface [beyond 4-feet bgs]) in the samples collected from surrounding neighborhoods (sample locations 100 and 156 through 167). Groundwater samples were compared to the sample collected from the upgradient well (GW-01) and surface water and sediment samples were compared to the most upstream samples (SW/SD-13). Samples containing compounds that were not detected in the background samples above the RDL are considered significantly above background if they were detected at a concentration equal to or greater than the background sample RDL. Complete laboratory analytical data tables for all analyses and matrices are provided in **Attachment 3**.

## 5.1 SOURCE CHARACTERIZATION

The following sections discuss the source sampling analytical data.

### 5.1.1 Non-Residential Soil Sampling

The analytical results for the three non-residential soil sampling areas including the former Old Norwood Dump; former Norwood Sanitary Landfill; and Norwood Park and Winona Home right-of-way are discussed below. Soil samples were analyzed for PAHs by means of SIM analysis to achieve lower detection limits and by routine SVOC analysis which has higher detection limits as PAHs are a subgroup of SVOCs. The tables summarizing the SVOCs analytical results include the analytical results from both methods. Because the SIM method has lower detection limits, PAHs may be detected in soil samples using the SIM method but not detected in the same sample when analyzed by the routine SVOC analysis method.

Two soil samples were analyzed for dioxin and furans, shortened names for a family of toxic substances that all share a similar chemical structure. The analytical summary tables list the concentration of each individual dioxin, furan, or congener. To determine toxicity to humans, a derived toxicity equivalence (TEQ) for the mixture of the dioxins and furans is calculated. TEQs are a weighted quantity measure based on the toxicity of each member of the dioxin and dioxin-like compounds category (furans) relative to the most toxic members of the category. TEQs are calculated values that provide toxicity of different combinations of dioxins and dioxin-like compounds.

**Figures 5A through 5D** show the sample locations that contain concentrations of PAHs, PCBs, pesticides, or inorganics, respectively, significantly above background (i.e., three times background levels) in the non-residential soil samples collected in September 2020, as discussed below.

### **Former Old Norwood Dump**

VOCs were not detected above the CRQL in the ten surface or ten subsurface soil samples collected from former Old Norwood Dump or not detected at concentrations significantly above background (**Table 4**).

PAHs and SVOCs were detected above the CRQL in nine and five surface samples, respectively (**Table 4**). As indicated in the table, nine of the ten surface soil samples collected from the former Old Norwood Dump contained concentrations of low-level PAHs by SIM significantly above comparable background samples analyzed by SIM. The tenth sample, SS-31, was not analyzed by SIM due to elevated concentrations above method capability. The routine SVOC method detected SVOCs in five of the ten surface soil samples at concentrations significantly above background (SS-28, SS-31, SS-33 [and its duplicate SS-33-01], and SS-36B).

SVOCs/PAHs detected by routine or SIM analysis at concentrations significantly above background in surface soil samples include the following:

- Acenaphthene in seven samples ranging from 4 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ) in SS-30 to 390  $\mu\text{g}/\text{kg}$  in sample SS-31
- Acenaphthylene in six samples ranging from 4.6  $\mu\text{g}/\text{kg}$  in SS-29 to 100  $\mu\text{g}/\text{kg}$  in sample SS-33
- Anthracene in seven samples ranging from 12  $\mu\text{g}/\text{kg}$  in SS-29 to 1,300  $\mu\text{g}/\text{kg}$  in sample SS-31
- Benzo(a)anthracene in eight samples ranging from 30  $\mu\text{g}/\text{kg}$  in SS-35 to 2,600  $\mu\text{g}/\text{kg}$  in sample SS-31
- Benzo(a)pyrene in seven samples ranging from 41  $\mu\text{g}/\text{kg}$  in SS-31 to 2,200  $\mu\text{g}/\text{kg}$  in sample SS-31
- Benzo(b)fluoranthene in six samples ranging from 61  $\mu\text{g}/\text{kg}$  in SS-29 to 2,600  $\mu\text{g}/\text{kg}$  in sample SS-31
- Benzo(k)fluoranthene in seven samples ranging from 21  $\mu\text{g}/\text{kg}$  in SS-S0 to 1,000  $\mu\text{g}/\text{kg}$  in sample SS-31
- Benzo(g,h,i)perylene in five samples ranging from 57  $\mu\text{g}/\text{kg}$  in SS-28 to 1,300  $\mu\text{g}/\text{kg}$  in sample SS-31
- Chrysene in seven samples ranging from 42  $\mu\text{g}/\text{kg}$  in SS-30 to 2,200  $\mu\text{g}/\text{kg}$  in sample SS-31
- Dibenzo(a,h)anthracene in nine samples ranging from 4.1  $\mu\text{g}/\text{kg}$  in SS-32 to 440  $\mu\text{g}/\text{kg}$  in sample SS-31
- Dibenzofuran in one sample at 440  $\mu\text{g}/\text{kg}$  in sample SS-31
- Fluoranthene in seven samples ranging from 81  $\mu\text{g}/\text{kg}$  in SS-29 to 4,800  $\mu\text{g}/\text{kg}$  in sample SS-31
- Fluorene in seven samples ranging from 4.4  $\mu\text{g}/\text{kg}$  in SS-29 to 650  $\mu\text{g}/\text{kg}$  in sample SS-31
- Indeno(1,2,3-cd)pyrene in seven samples ranging from 21  $\mu\text{g}/\text{kg}$  in SS-30 to 1,300  $\mu\text{g}/\text{kg}$  in sample SS-31
- 2-Methylnaphthalene in four samples ranging from 6.8  $\mu\text{g}/\text{kg}$  in SS-36B to 230  $\mu\text{g}/\text{kg}$  in sample SS-31
- Naphthalene in four samples ranging from 15  $\mu\text{g}/\text{kg}$  in SS-33 to 240  $\mu\text{g}/\text{kg}$  in SS-31
- Phenanthrene in eight samples ranging from 36  $\mu\text{g}/\text{kg}$  in SS-32 to 4,600  $\mu\text{g}/\text{kg}$  in sample SS-31
- Pyrene in nine samples ranging from 41  $\mu\text{g}/\text{kg}$  in SS-32 to 4,800  $\mu\text{g}/\text{kg}$  in sample SS-31

Only two of the ten subsurface soil samples (SB-31 and SB-36B) contained low-level concentrations of PAHs by SIM analysis at concentrations significantly above background and only SB-36B contained one SVOC by routine analysis at a concentration significantly above background (**Table 4**). SVOCs/PAHs detected by routine or SIM analysis at concentrations significantly above background in subsurface soil samples include the following:

- Acenaphthylene in one sample at 8 µg/kg in sample SB-31
- Anthracene in one sample at 5.2 µg/kg in sample SB-31
- Benzo(a)anthracene in two samples at 12 µg/kg in SB-36B and 35 µg/kg in sample SB-31
- Benzo(a)pyrene in two samples at 6.5 µg/kg in SS-36B and 41 µg/kg in sample SB-31
- Benzo(b)fluoranthene in two samples at 16 µg/kg in SS-36B and 57 µg/kg in sample SB-31
- Benzo(k)fluoranthene in one sample at 16 µg/kg in sample SB-31
- Benzo(g,h,i)perylene in two samples at 4.1 µg/kg in SS-36 B and 58 µg/kg in sample SB-31
- Bis(2-ethylhexyl)phthalate in one sample at 3,000 µg/kg in sample SB-36B
- Chrysene in two samples at 20 µg/kg in SS-36B and 37 µg/kg in sample SB-31
- Dibenzo(a,h)anthracene in one sample at 9.5 µg/kg in sample SB-31
- Fluoranthene in two samples at 20 µg/kg in SS-36B and 43 µg/kg in sample SB-31
- Indeno(1,2,3-cd)pyrene in one sample at 28 µg/kg in sample SB-31
- Phenanthrene in two samples at 12 µg/kg in SS-36B and 14 µg/kg in sample SB-31
- Pyrene in two samples at 25 µg/kg in SS-36B and 31 µg/kg in sample SB-31

The PCB Aroclor-1260 was detected at concentrations significantly above background in three of the ten surface soil samples: SS-29 at 68 µg/kg; SS-30 at 71 µg/kg; and SS-36B at an estimated concentration of 96 µg/kg (**Table 5**). PCBs were not detected above the CRQL in the subsurface soil samples collected from former Old Norwood Dump or not detected at concentrations significantly above background.

Five of the ten surface soil samples (SS-29, SS-30, SS-31, SS-35, and SS-36B) contained at least one pesticide at concentrations significantly above background (**Table 5**). Only one subsurface soil sample (SB-36B) contained pesticides significantly above background. SB-36 contained one pesticide, 4,4,4-DDD, at a concentration of 4.9 µg/kg. Pesticides detected at concentrations significantly above background include:

- 4,4,4-DDD in three samples ranging from 3.6 µg/kg in SS-35 to 8.5 µg/kg in SS-31
- 4,4,4-DDE in one sample at 8.5 µg/kg in SS-36B
- 4,4,4-DDT in three samples ranging from 4.9 µg/kg in SS-36B to 48 µg/kg in SS-35
- cis-Chlordane in five samples ranging from 2.6 µg/kg in SS-29 to 7.6 µg/kg in SS-31
- trans-Chlordane in three samples from 2.6 µg/kg in SS-30 to 6.4 µg/kg in SS-36B
- beta-BHC (Lindane) in one sample at 12 µg/kg in SS-31

At least one inorganic element was detected at elevated concentrations in all of the surface and subsurface soil samples collected from the former Old Norwood Dump (**Table 7**). Inorganics detected at concentrations significantly above background in surface soil samples include the following:

- Antimony in two samples at 1.2 milligrams per kilogram (mg/kg) in SS-35 and 2.1 mg/kg in SS-32
- Barium in four samples ranging from 143 mg/kg in SS-30 to 166 mg/kg in SS-35
- Cadmium in five samples ranging from 0.47 mg/kg in SS-32 to 2.3 mg/kg in SS-31
- Calcium in seven samples ranging from 1,430 mg/kg in SS-33 to 9,250 mg/kg in SS-31
- Chromium in five samples ranging from 62.3 mg/kg in SS-32 to 389 mg/kg in SS-31
- Copper in six samples ranging from 51.2 mg/kg in SS-36B to 157 mg/kg in SS-31
- Lead in five samples ranging from 73.1 mg/kg in SS-036B to 384 mg/kg in SS-35
- Magnesium in four samples ranging from 5,490 mg/kg in SS-32 to 7,770 mg/kg in SS-30
- Manganese in one sample at 508 mg/kg in SS-36B
- Mercury in eight samples ranging from 0.11 in SS-28 to 1.1 mg/kg in SS-31
- Nickel in seven samples ranging from 13.3 mg/kg in SS-28 to 112 mg/kg in SS-31
- Potassium in eight samples ranging from 2,110 mg/kg in SS-36B to 10,100 mg/kg in SS-30
- Silver in five samples ranging from 3.1 mg/kg in SS-36B to 27.7 mg/kg in SS-31
- Zinc in seven samples ranging from 82.7 mg/kg in SS-28 to 478 mg/kg in SS-31

Inorganics detected at concentrations significantly above background in subsurface soil samples include the following:

- Arsenic in six samples ranging from 2.4 mg/kg in SB-34 to 3.6 mg/kg in SB-36B
- Barium in one sample as high as 133 mg/kg in SB-31
- Calcium in eight samples ranging from 441 mg/kg in SB-33 to 2,490 mg/kg in SB-31
- Chromium in two samples at 35.4 in SB-28 to 37.4 mg/kg in SB-36B
- Lead in three samples ranging from 39.7 mg/kg in SB-32 to 162 mg/kg in SB-31
- Mercury in two samples at 0.14 mg/kg in SB-30 to 0.27 mg/kg in SB-36B
- Nickel in five samples ranging from 15.4 mg/kg in SB-29 to 19.1 mg/kg in SB-36B
- Thallium in one sample as high as 0.61 mg/kg in SB-35

Dioxins and furans were detected in the one surface soil sample (SS-36B) (**Table 6**). The derived TEQ in the sample is 9.7 nanograms per kilogram (ng/kg). Background samples were not analyzed for dioxins and furans.

In summary, at least one PAH and/or inorganic were detected in all surface soil samples collected from the former Old Norwood Dump at concentrations significantly above background based on SIM analysis and comparable background samples analyzed by SIM. Sample SS-31 contained the highest concentrations for the majority of the constituents, thus documenting an area of observed contamination. Additionally, at least one inorganic was detected in all subsurface soil samples at concentrations significantly above background. PAHs were only detected at concentrations significantly above background in two of the subsurface soil samples. Three of the 10 surface soil samples contained concentrations of PCBs significantly above

background. PCBs were not detected above background in the subsurface soil samples. Dioxins and furans were detected in the one sample analyzed for these constituents. Pesticides were detected at concentrations significantly above background in five of the 10 surface soil samples and one subsurface soil sample.

### **Former Norwood Sanitary Landfill**

VOCs were not detected above the CRQL in the nine surface or ten subsurface soil samples collected from the former Norwood Sanitary Landfill or not detected at concentrations significantly above background, with the exception of the concentration of acetone in subsurface soil sample SB-41 at 20 µg/kg (**Table 4**).

Soil samples were analyzed for PAHs by means of SIM analysis to achieve lower detection limits and by routine SVOC analysis with the exception of SB-42 (and duplicate SB-42-1). Samples SB-42 and SB-42-1 were not analyzed by SIM due to elevated concentrations above method capability. Summary of the detected PAHs and SVOCs above the CRQL is provided in **Table 4**.

All surface soil samples collected from the former Norwood Sanitary Landfill contained concentrations of low-level PAHs by SIM significantly above comparable background samples analyzed by SIM, with the exception of SS-37A (**Table 4**). The surface soil samples analyzed by routine SVOCs methods detected SVOCs in three of the nine surface soil samples (SS-39C, SS-41, and SS-43) at concentrations significantly above background.

SVOCs/PAHs detected by routine or SIM analysis at concentrations significantly above background in surface soil samples include the following:

- Acenaphthene in five ranging from 6 µg/kg in SS-38A to 94 µg/kg in sample SS-43
- Acenaphthylene in six samples ranging from 7.8 µg/kg in SS-38A to 43 µg/kg in sample SS-43
- Anthracene in eight samples ranging from 6.6 µg/kg in SS-40 to 290 µg/kg in sample SS-43
- Benzo(a)anthracene eight samples ranging from 35 µg/kg in SS-40 to 970 µg/kg in sample SS-43
- Benzo(a)pyrene in eight samples ranging from 34 µg/kg in SS-40 to 670 µg/kg in sample SS-43
- Benzo(b)fluoranthene in six samples ranging from 100 µg/kg in SS-39A to 1,000 µg/kg in sample SS-43
- Benzo(k)fluoranthene in six samples ranging from 28 µg/kg in SS-39A to 330 µg/kg in sample SS-43
- Benzo(g,h,i)perylene in seven samples from 46 µg/kg in SS-38A to 450 µg/kg in sample SS-41
- Chrysene eight samples ranging from 37 µg/kg in SS-42 to 730 µg/kg in sample SS-43
- Dibenzo(a,h)anthracene in eight samples ranging from 6.5µg/kg in SS-42 to 130 µg/kg in sample SS-43
- Fluoranthene in seven samples ranging from 69 µg/kg in SS-40 to 1,700 µg/kg in sample SS-43
- Fluorene in six samples ranging from 3.9 µg/kg in SS-39A to 95 µg/kg in sample SS-43
- Indeno(1,2,3-cd)pyrene in eight samples ranging from 20 µg/kg in SS-42 to 370 µg/kg in sample SS-43

- 2-Methylnaphthalene in three samples ranging from 6.9 µg/kg in SS-42 to 29 µg/kg in sample SS-43
- Naphthalene in four samples ranging from 11 µg/kg in SS-41 to 52 µg/kg in SS-43
- Phenanthrene in eight samples from 27 µg/kg in SS-40 to 1,200 µg/kg in sample SS-43
- Pentachlorophenol in three samples from 2.2 µg/kg in SS-41 to 9.9 µg/kg in SS-44
- Pyrene in eight samples from 48 µg/kg in SS-40 to 1,400 µg/kg in sample SS-43

Only five of the ten subsurface soil samples (SB-41, SB-42 [and duplicate SB-42-1], SB-43, and SB-44) contained concentrations of PAHs and VOCs by either SIM or routine analysis (**Table 4**).

- Acenaphthene in five samples ranging from 14 µg/kg in SB-44 to 1,700 µg/kg in sample SB-42-1
- Acenaphthylene in five samples ranging from 8.8 µg/kg in SB-44 to 930 µg/kg in sample SB-42-1
- Anthracene in five samples ranging from 34 µg/kg in SB-44 to in sample SB-42-1
- Benzo(a)anthracene five samples ranging from 87 µg/kg in SB-44 to 7,300 µg/kg in sample SB-42
- Benzo(a)pyrene in five samples ranging from 70 µg/kg in SB-44 to 4,800 µg/kg in sample SB-42
- Benzo(b)fluoranthene in five samples ranging from 100 µg/kg in SB-44 to 5,400 µg/kg in sample SB-42
- Benzo(k)fluoranthene in five samples ranging from 42 µg/kg in SB-44 to 1,700 µg/kg in sample SB-42
- Benzo(g,h,i)perylene in five samples ranging from 66 µg/kg in SB-44 to 1,800 µg/kg in sample SB-42
- 1,1-Biphenyl in one sample at 250 µg/kg in sample SB-42-1
- Bis(2-ethylhexyl)phthalate in three samples ranging from 290 µg/kg in SB-42 to 1,800 µg/kg in sample SB-41
- Butylbenzylphthalate in one sample at 230 µg/kg in sample SB-41
- Carbazole in two samples ranging from 960 µg/kg in SB-42 to 1,300 µg/kg in sample SB-42-1
- Chrysene five samples ranging from 73 µg/kg in SB-44 to 6,700 µg/kg in sample SB-42
- Dibenzo(a,h)anthracene in five samples ranging from 21 µg/kg in SB-44 to 760 µg/kg in sample SB-42
- Dibenzofuran in two samples ranging from 1,200 µg/kg in SB-42 to 1,700 µg/kg in sample SB-42-1
- Di-n-butylphthalate in two samples ranging from 220 µg/kg in SB-42 to 390 µg/kg in sample SB-43
- Di-n-octyl phthalate in one sample at 4,000 µg/kg in sample SB-41
- Fluoranthene in five samples ranging from 160 µg/kg in SB-44 to 15,000 µg/kg in sample SB-42 and SB-42-1
- Fluorene in five samples ranging from 13 µg/kg in SB-44 to 3,600 µg/kg in sample SB-42-1
- Indeno(1,2,3-cd)pyrene in five samples ranging from 63 µg/kg in SB-44 to 1,900 µg/kg in sample SB-42
- 2-Methylnaphthalene in three samples ranging from 7.9 µg/kg in SB-44 to 640 µg/kg in sample SB-42-1
- Naphthalene in three samples ranging from 56 µg/kg in SB-44 to 450 µg/kg in SB-42-1
- Pentachlorophenol in three samples ranging from 5.7 µg/kg in SB-44 to 29 µg/kg in SB-43
- Phenanthrene in five samples ranging from 130 µg/kg in SB-44 to 21,000 µg/kg in sample SB-42-1
- Pyrene in five samples ranging from 140 µg/kg in SB-44 to 13,000 µg/kg in sample SB-42 and SB-42-1

The PCB Aroclor-1260 was detected in four of the nine surface soil samples (SS-39C at 81 µg/kg, SS-41 at 110 µg/kg, SS-43 at 63,000 µg/kg, and SS-44 at 269 µg/kg) at concentrations significantly above background (**Table 5**). PCBs were also detected at concentrations significantly above background in subsurface soil sample SB-43 (Aroclor-1260 at 10,000 µg/kg) and SB-41 (Aroclor-1248 at 381 µg/kg).

Four of the nine surface soil samples (SS-39C, SS-41, SS-42, and SS-44) contained at least one pesticide at concentrations significantly above background (**Table 5**). Sample SS-44 contained the most pesticides and the highest concentrations. Five of ten subsurface soil samples (SB-41, SB-42 [and duplicate SB-42-1], SB-43, and SB-44) contained at least one pesticide at concentrations significantly above background. Samples SB-42, SB-43, and SB-44 contained the most pesticides, and SB-43 contained the highest concentrations.

Dioxins and furans were detected in surface soil sample SS-39A and its duplicate (SS-39A-01) (**Table 6**). The derived TEQ in the samples are 5.6 ng/kg and 5 ng/kg. Background samples were not analyzed for dioxins and furans.

At least one inorganic element was detected at concentrations significantly above background in all of the surface and subsurface soil samples collected from the former Norwood Sanitary Landfill, with the exception of subsurface soil samples SB-39C and SB-39A (**Table 7**). Inorganics detected at concentrations significantly above background in surface soil samples include the following:

- Antimony in two samples ranging from 1.1 mg/kg in SS-43 to 5.9 mg/kg in SS-44
- Arsenic in one sample at 32.8 mg/kg in SS-43
- Barium in two samples ranging from 245 mg/kg in SS-43 to 379 mg/kg in SS-44
- Cadmium in six samples ranging from 0.45 mg/kg in SS-40 to 3.2 mg/kg in SS-44
- Calcium in nine samples ranging from 1,220 mg/kg in SS-37A to 22,8200 mg/kg in SS-39A
- Chromium in one sample at 234 mg/kg in SS-43
- Copper in four samples ranging from 43.1 mg/kg in SS-41 to 289 mg/kg in SS-42
- Iron in two samples ranging from 87,200 mg/kg in SS-44 to 136,000 mg/kg in sample SS-43
- Lead in seven samples ranging from 50.2 mg/kg in SS-38A to 1,180 mg/kg in SS-44
- Magnesium in one sample at 13,000 mg/kg in SS-39A
- Manganese in four samples ranging from 325 mg/kg in SS-42 to 417 mg/kg in SS-44
- Mercury in four samples ranging from 0.11 mg/kg in SS-40 and SS-42 to 0.9 mg/kg in SS-43
- Nickel in three samples ranging from 14.5 mg/kg in SS-42 to 29.4 mg/kg in SS-44
- Potassium in three samples ranging from 2,190 mg/kg in SS-39A to 2,930 mg/kg in SS-44
- Silver in one sample at 1.4 mg/kg in SS-44
- Zinc in seven samples ranging from 60.4 mg/kg in SS-38A to 618 mg/kg in SS-44

Inorganics detected at concentrations significantly above background in subsurface soil samples include the following:

- Arsenic in seven samples ranging from 2.4 mg/kg in SB-44 to 5.7 mg/kg in SB-41

- Barium in six samples ranging from 186 mg/kg in SB-43 to 762 mg/kg in SB-43
- Cadmium in five samples ranging from 0.69 mg/kg in SB-42-1 to 22.3 mg/kg in SB-43
- Calcium in seven samples ranging from 406 mg/kg in SB-38A to 6,320 mg/kg in SB-41
- Chromium in three samples ranging from 39 mg/kg in SB-41 to 432 mg/kg in SB-43
- Cobalt in one sample at 19.3 mg/kg in SB-40
- Copper in five samples ranging from 112 mg/kg in SB-44 to 380 mg/kg in SB-41
- Iron in one sample at 123,000 mg/kg in SB-43
- Lead in five samples ranging from 385 mg/kg in SB-42-1 to 2,310 mg/kg in SB-44
- Manganese in five samples ranging from 318 mg/kg in SB-42-1 to 4,810 in SB-40
- Mercury in five samples ranging from 0.18 mg/kg in SB-42-1 to 5.5 mg/kg in SB-44
- Nickel in five samples ranging from 19.9 mg/kg in SB-41 to 71.8 mg/kg in SB-43
- Silver in three samples ranging from 0.86 mg/kg in SB-43 to 1.3 mg/kg in SB-44
- Zinc in five samples from 312 mg/kg in SB-42-1 to 1,270 mg/kg in SB-43

In summary, with the exception of SS-37A, at least one PAH and/or inorganic were detected in all surface soil samples collected from the former Norwood Sanitary Landfill at concentrations significantly above background (based on comparable background samples analyzed by SIM), documenting an area of observed contamination. Additionally, five of the ten subsurface and eight of the ten subsurface soil samples contained concentrations of PAHs or inorganics, respectively, significantly above background (based on comparable background samples analyzed by SIM). In four of the nine surface soil samples and two of the subsurface soil samples, PCBs were detected at concentrations significantly above background and as high as 63,000 µg/kg in sample SS-43. Surface soil samples SS-43 and SS-44 and subsurface soil samples SB-42 and SB-43 containing the highest concentrations for the majority of the constituents. Dioxins and furans were detected in the one sample analyzed for these constituents. Pesticides were detected at concentrations significantly above background in four of the nine surface soil samples and five of the 10 subsurface soil samples.

### **Norwood Park and Winona Homes Right-of Way**

VOCs were not detected above the CRQL in the three surface and subsurface soil samples collected from the Norwood Park and the Winona Homes right-of-way or not detected at concentrations significantly above background, with the exception of the concentration of acetone in surface soil sample SS-25 at 14 µg/kg (**Table 4**).

PAHs and SVOCs were not detected above the CRQL in the three surface and subsurface soil samples collected from the Norwood Park and the Winona Homes right-of-way or not detected at concentrations significantly above background (**Table 4**).

PCBs and pesticides were not detected above the CRQL in the three surface and subsurface soil samples collected from the Norwood Park and the Winona Homes right-of-way or not detected at concentrations significantly above background (**Table 5**).

Inorganics were not detected in the surface and subsurface soil samples collected from the Norwood Park and the Winona Homes right-of-way or not detected at concentrations significantly above background, with the exception of mercury at 0.11 mg/kg in surface soil sample SS-24, the concentration of calcium at 713 mg/kg in subsurface soil sample SB-24, and the concentration of thallium at 0.57 mg/kg in subsurface soil sample SS-23 (**Table 7**).

In summary, with the exception of acetone and mercury detected in one sample each at concentrations significantly above background, samples collected from Norwood Park and the Winona Homes right-of-way did not contain concentrations of contaminants significantly above background; therefore, an area of observed contamination was not documented with respect to these areas.

### 5.1.2 Residential Soil Sampling

The analytical results for the residential soil sampling areas are discussed below. Soil samples were analyzed for PAHs by means of SIM analysis to achieve lower detection limits and by routine SVOC analysis which has higher detection limits as PAHs are a subgroup of SVOCs. The tables summarizing the SVOCs analytical results include the analytical results from both methods. Because the SIM method has lower detection limits, PAHs may be detected in soil samples using the SIM method but not detected in the same sample when analyzed by the routine SVOC analysis method.

**Figures 6A** through **6D** show the sample locations that contain concentrations of PAHs, PCBs, pesticides, or metals, respectively, significantly above background (i.e., three times background levels) in the soil samples collected from residential properties in November 2020, as discussed below.

As shown on **Table 8**, VOCs were detected in soil samples collected from 13 of the 57 properties within Winona Homes neighborhood at concentrations significantly above background: five surface soil samples (SS-105, SS-119, SS-126, SS-127, and SS-146) contained acetone ranging from 13 µg/kg to 28 µg/kg and one surface soil sample (SS-118) contained methyl acetate at a concentration of 9.1 µg/kg; three shallow subsurface soil samples (SB-107, SB-121, and SB-138) contained acetone ranging from 13 µg/kg to 33 µg/kg and one shallow subsurface soil samples (SB-128) contained tetrachloroethylene (PCE) at a concentration of 12 µg/kg; one deep subsurface soil sample (DB-103) contained concentrations of acetone

at 33 µg/kg and three deep subsurface soil samples (DB-143, DB-146-01, and DB-147) contained concentrations of methylene chloride ranging from 8 µg/kg to 20 µg/kg.

Soil samples were analyzed for PAHs by means of SIM analysis to achieve lower detection limits, and by routine SVOC analysis, with the exception of surface soil sample SS-161 and composite surface soil samples CS-116, CS-140, and CS-169. Samples SS-161, CS-140, and CS-169 were not analyzed by SIM due to elevated concentrations above method capability. Summary of the detected PAHs and SVOCs above the CRQL is provided in **Table 8**.

Six surface soil and two shallow subsurface soil sample collected from seven of the 57 properties within the Winona Homes neighborhood contained concentrations of at least one low-level PAH by SIM above comparable background samples analyzed by SIM (**Table 8**). However, it should be noted, one of the surface soil background samples SS-161, was not analyzed by SIM due to elevated concentrations of PAHs. The composite surface soil samples and deep subsurface soil samples did not contain low-level PAHs by SIM significantly above background. Four surface soil, six composite, and one shallow subsurface soil sample collected from ten of the 57 properties within the Winona Homes neighborhood analyzed by routine SVOCs methods detected SVOCs at concentrations significantly above background. The deep subsurface soil samples did not contain concentrations of SVOCs by routine analysis significantly above background.

SVOCs/PAHs detected by routine or SIM analysis at concentrations significantly above background in surface soil samples include the following:

- Anthracene in one sample at 310 µg/kg in SS-154
- Benzo(a)anthracene in three samples ranging from 900 µg/kg in SS-109 to 2,400 µg/kg in sample SS-154
- Benzo(a)pyrene in three samples ranging from 790 µg/kg in SS-109 to 1,800 µg/kg in sample SS-154
- Benzo(b)fluoranthene in four samples ranging from 1,100 µg/kg in SS-105 to 2,600 µg/kg in sample SS-154
- Benzo(k)fluoranthene in one sample at 940 µg/kg in SS-154
- Benzo(g,h,i)perylene in six samples ranging from 410 µg/kg in SS-105 to 1,300 µg/kg in sample SS-154
- Bis(2-ethylhexyl)phthalate in three samples ranging from 270 µg/kg in SS-114 1,400 µg/kg in SS-102 and SS-134
- Butylbenzylphthalate in one sample at 6,400 µg/kg in SS-121
- Chrysene in three samples ranging from 850 µg/kg in SS-109 to 3,000 µg/kg in sample SS-154
- Dibenzo(a,h)anthracene in four samples ranging from 120 µg/kg in SS-105 to 400 µg/kg in sample SS-154
- Fluoranthene in three samples ranging from 2,000 µg/kg in SS-109 to 4,400 µg/kg in sample SS-154
- Fluorene in one sample at 71 µg/kg in SS-154

- Indeno(1,2,3-cd)pyrene in four samples ranging from 390 µg/kg in SS-105 to 1,300 µg/kg in sample SS-154
- Naphthalene in one sample at 7.5 µg/kg in SS-125
- Phenanthrene in three samples ranging from 1,100 µg/kg in SS-109 to 1,700 µg/kg in sample SS-154
- Pyrene in three samples a ranging from 1,700 µg/kg in SS-109 to 3,500 µg/kg in sample SS-154

SVOCs/PAHs detected by routine or SIM analysis at concentrations significantly above background in composite surface soil samples include the following:

- Bis(2-ethylhexyl)phthalate in six samples ranging from 250 µg/kg in CS-127 to 2,900 µg/kg in CS-134
- Butylbenzylphthalate in two samples ranging from 42 µg/kg in CS-122 to 27,000 µg/kg in CS-134
- Dimethyl phthalate in one sample at 620 µg/kg in CS-134

SVOCs/PAHs detected by routine or SIM analysis at concentrations significantly above background in shallow subsurface soil samples include the following:

- Acenaphthene in one sample at 91 µg/kg in SB-128
- Acenaphthylene in one sample at 120 µg/kg in SB-128
- Anthracene in one sample at 750 µg/kg in SB-128
- Benzo(a)anthracene in one sample at 2,000 µg/kg in SB-128
- Benzo(a)pyrene in one sample at 1,200 µg/kg in SB-128
- Benzo(b)fluoranthene in one sample at 1,500 µg/kg in sample SB-128
- Benzo(k)fluoranthene in one sample at 590 µg/kg in SB-128
- Benzo(g,h,i)perylene in one sample at 570 µg/kg in SB-128
- Chrysene in one sample at 1,500 µg/kg in SB-128
- Dibenzo(a,h)anthracene in one sample at 250 µg/kg in sample SB-128
- Fluoranthene in one sample at 3,000 µg/kg in SB-128
- Fluorene in one sample at 94 µg/kg in SB-128
- Indeno(1,2,3-cd)pyrene in one sample at 550 µg/kg in SB-128
- 2-Methylnaphthalene in two samples ranging from 4.7 µg/kg in SB-110 to at 75 µg/kg in SB-128
- Naphthalene in two samples ranging from 14 µg/kg in SB-110 to 63 µg/kg in SB-128
- Phenanthrene in one sample at 2,500 µg/kg in SB-128
- Pyrene in one sample at 3,200 µg/kg in SB-128

PCBs were detected in soil samples collected from two of the 57 properties within Winona Homes neighborhood at concentrations significantly above background (**Table 9**). Composite surface soil sample CS-153 contained 150 µg/kg of Aroclor-1254 and shallow subsurface soil sample SB-128 contained 540 µg/kg Aroclor-1260. Additionally, the surface soil sample, SS-141 (and duplicate SS-141-1), contained concentrations of Aroclor-1254 above the CRQL at 47 µg/kg and 73 µg/kg, respectively. However, the concentrations in SS-141 are not significant with respect to background due to the fact that two surface soil samples (SS-161 and SS-164) collected as background from neighborhoods outside of Winona Homes

contained concentrations of PCBs. Surface soil sample SS-161 contained 200 µg/kg Aroclor-1248 and 290 µg/kg Aroclor-1254 and sample SS-164 contained 52 µg/kg Aroclor-1254.

Pesticides were detected in soil samples (21 surface, 20 composite, and 2 shallow subsurface) collected from 31 of the 57 properties within Winona Homes at concentrations significantly above background (**Table 9**). However, as shown on **Table 9** and discussed further in the attached data validation reports, some of the analytical results are unusable. The sample results were rejected during validation due to significant deficiencies in meeting QC criteria; specifically, a number of analytes in the samples had results greater than the CRQL with Percent Difference (%D) greater than 200% between the dual column analyses. The large %D between the two results may indicate interferences impacting the analyte.

Inorganics were detected in soil samples (4 surface, 3 composite, 4 shallow subsurface, and 4 deep subsurface) collected from 14 of the 57 properties within Winona Homes at concentrations significantly above background (**Table 10**).

Inorganics detected at concentrations significantly above background in surface soil samples include the following:

- Arsenic in one sample at 19.3 mg/kg in SS-101
- Calcium in one sample at 26,900 mg/kg in SS-149
- Chromium in one sample at 366 mg/kg in SS-131
- Magnesium in two samples ranging from 5.960 mg/kg in SS-105 to 16,500 mg/kg in SS-131

Inorganics detected at elevated concentrations in composite surface soil samples include the following:

- Chromium in one sample at 178 mg/kg in CS-131
- Copper in one sample at 824 mg/kg in CS-104-1
- Magnesium in one sample at 8,230 mg/kg in CS-146

Inorganics detected at elevated concentrations in shallow subsurface surface soil samples include the following:

- Cadmium in one sample at 4.3 mg/kg in SB-128
- Calcium in one sample at 8,410 mg/kg in SB-28
- Copper in two samples ranging from 77.9 mg/kg in SB-110 to 412 mg/g in SB-128
- Lead in two samples ranging from 161 mg/kg in SB-129 to 1,070 mg/kg in SB-128
- Manganese in one sample at 2,060 mg/kg in SB-147
- Nickel in one sample at 49.1 mg/kg in SB-128
- Silver in one sample at 1.4 mg/kg in SB-128
- Zinc in one sample at 797 mg/kg in SB-28

Inorganics detected at elevated concentrations in deep subsurface soil samples include the following:

- Arsenic in three samples ranging from 4.9 mg/kg in DB-143 to 6.9 mg/kg in DB-136
- Barium in one sample at 214 mg/kg in DB-119
- Beryllium in one sample at 1.5 mg/kg in DB-119
- Chromium in one sample at 6.3 mg/kg in DB-119
- Cobalt in one sample at 27.5 mg/kg in DB-119
- Copper in one sample at 18.1 mg/kg in DB-115
- Iron in one sample at 66,000 mg/kg in DB-119
- Nickel in one sample at 51.5 mg/kg in DB-119
- Potassium in two samples ranging from 3,190 mg/kg in DB-115 to 7,690 mg/kg in DB-119
- Vanadium in one sample at 94.1 mg/kg in DB-119
- Zinc in one sample at 160 mg/kg in DB-119

In summary, at least one PAH, PCB, pesticide, and/or inorganic such as arsenic, cobalt, chromium, copper, lead, or manganese were detected at concentrations significantly above background (based on comparable background samples analyzed by SIM) from 39 of the 57 properties, documenting an area of observed contamination within Winona Homes as follows:

- PAHs at SS-105, SS-109, SS-110, SS-144, SS-149, SS-154, and SB-128
- Pesticides at CS-101, SS/CS-102, CS-103, SS/CS-104, SS/CS-105, SS-106, SB-111, CS-113, CS-114, CS-116, SS/CS-119, SS/CS-120, SS-122, CS-123, SS/CS-124, CS-127, SB-128, SS-135, SS-136, SS/CS/SB-138, SS-141, SS-145, SS-149, SS/CS-151, SS/CS-153, SS-154, SS/CS-155, SS-168, CS-169
- PCBs at CS-153, SB-128 (\*location SS-141 and background locations SS-161 and 164 also contained concentrations of PCBs).
- Metals at SS-101, CS/SS-131, SB-110, SB-128, SB-129, SB-147, DB-115, DB-119, DB-136, and DB-143

\*Note: background sample SS-161 was not analyzed for PAHs by SIM due to elevated concentrations of PAHs.

## 5.2 GROUNDWATER PATHWAY

Groundwater samples GW04, collected in the former Old Norwood Dump, and GW06, collected at the northern boundary of the former Norwood Sanitary Landfill/southern boundary of Winona Homes, contained concentrations of chloromethane significantly above background at 0.82 micrograms per liter ( $\mu\text{g/l}$ ) and an estimated concentration of 0.76  $\mu\text{g/l}$ , respectively (**Table 11**). Additionally, sample GW06 and its duplicate, contained concentrations of chloroform above background at 0.59  $\mu\text{g/l}$  and 0.64  $\mu\text{g/l}$ , respectively. Chloromethane and chloroform were not detected in collected source/soil samples; therefore, the presence of these substances in the groundwater is not attributable to sources present at the Site.

SVOCs, pesticides, and PCBs were not detected above the CRQL in the groundwater samples or not detected at concentrations significantly above background.

Groundwater sample GW03, collected in the Winona Homes neighborhood, contained concentrations of arsenic above background at 2.5 µg/l (**Table 12**). Groundwater sample GW04, collected in the former Old Norwood Dump, contained concentrations of cadmium, lead, and zinc at concentrations above background at 2.9 µg/l, 37.9 µg/l, and 833 µg/l, respectively (**Table 12**). Remaining samples did not contain concentrations of metals significantly above background. Arsenic, cadmium, lead, and zinc were also detected in the collected source/soil samples; therefore, an observed release to the groundwater migration pathway has been documented.

### 5.3 SURFACE WATER PATHWAY

VOCs, SVOCs, pesticides, and PCBs were not detected above the CRQL in the surface water samples or not detected at concentrations significantly above background.

Aluminum was detected in all the surface water samples at concentrations above background ranging from 39.1 µg/l to 155 µg/l (**Table 13**). However, aluminum was not detected in collected source/soil samples; therefore, the presence of aluminum in the surface water is not attributable to sources present at the Site. Lead was detected in two surface water samples collected from Muckinipattis Creek (SW-16 and SW-18) at concentrations significantly above background at 1.5 µg/l and 2 µg/l, respectively. Lead was also detected in collected source/soil samples documenting an observed release to the surface water migration pathway.

Two VOCs, 2-butanone and acetone, were detected in three sediment samples (SD-17, SD-19, and SD-20) at concentrations significantly above background (**Table 14**). Concentrations of 2-butanone ranged from 16 µg/kg to an estimated concentration of 60 µg/kg and concentrations of acetone ranged from 70 µg/kg to 240 µg/kg. SD-17 was collected in the Muckinipattis Creek and samples SD-19 and SD-20 were collected in the wetland area adjacent to the former Old Norwood Dump. 2-butanone was not detected in collected source/soil samples; therefore, the presence of this substance in the sediment is not attributable to sources present at the Site. Additionally, acetone is a common lab contaminant and is not expected to be a contaminant of concern associated with Site sources.

Dimethylphthalate was the only SVOC detected at concentrations significantly above background in the sediment samples (**Table 14**). Samples SD-22 and SD-23, collected in the wetland area downstream from the former Norwood Sanitary Landfill, contained 3,100 µg/kg and 1,300 µg/kg of dimethylphthalate,

respectively. Dimethylphthalate was also detected in the collected source/soil samples; therefore, an observed release to the surface water migration pathway has been documented.

Pesticides, and PCBs were not detected above the CRQL in the sediment samples or not detected at concentrations significantly above background.

Sediment sample SD-18 collected adjacent to the fishing pier in the Muckinipattis Creek contained concentrations of calcium and magnesium significantly above background at 9,930 mg/kg and 7,500 mg/kg, respectively (**Table 15**). Sample SD-19 collected in the wetland area adjacent to the former Old Norwood Dump contained concentrations of calcium (9,410 mg/kg) and silver (1.4 mg/kg) significantly above background. Sediment sample SD-20 collected in wetland area adjacent to the former Old Norwood Dump contained the following metals at concentrations significantly above background: barium (277 mg/kg), cadmium (8.6 mg/kg), calcium (11,300 mg/kg), chromium (907 mg/kg), copper (364 mg/kg), mercury (2 mg/kg), nickel (976 mg/kg), silver (40.3 mg/kg), and zinc (1,560 mg/kg). Sediment sample SD-22 collected in the wetland area downstream from the former Norwood Sanitary Landfill contained the following metals at concentrations significantly above background: aluminum (37,100 mg/kg), beryllium (2 mg/kg), barium (267 mg/kg), cadmium (2.2 mg/kg), calcium (10,300 mg/kg), copper (288 mg/kg), iron (47,600 mg/kg), lead (198 mg/kg), magnesium (8,150 mg/kg), manganese (1,140 mg/kg), silver (1.7 mg/kg), sodium (687), vanadium (99), and zinc (681 mg/kg). Arsenic, barium, cadmium, copper, iron, lead, manganese, silver, and zinc were also detected in collected source/soil samples documenting an observed release to the surface water migration pathway.

**Figure 7** shows the surface water and sediment sampling locations that contain concentrations of substances significantly above background (i.e., three times background levels) for substances that were also detected at concentrations significantly above background in soil samples.

## 6.0 HUMAN HEALTH RISK ASSESSMENT

### 6.1 INTRODUCTION

As stated in the introduction to this ESI report, the purpose of an ESI is to collect sufficient information concerning the conditions at the Site to assess the relative threat posed to human health and the environment by actual or potential release of hazardous substances attributable to the Site and to determine the need for additional action under CERCLA based on criteria set forth in EPA's Hazard Ranking System (HRS) Final Rule. The primary means of evaluating data for HRS purposes is determining significance above background, that is determining whether constituents are present at concentrations greater than three times those found in areas believed not to have been impacted by activities at the Site. Since community concerns were raised, EPA took an additional step to help assist with determining if the constituents detected at the Site presented a risk to human health by performing risk-ratio screening (i.e., streamlined risk assessment) and detailed site-specific risk assessment when risk-ratio screening results exceeded the target risk criteria.

The purpose of this section is to evaluate potential human health risks and hazards associated with exposure to Site-related constituents where human receptors may be exposed to soil, groundwater, surface water, and sediment. The objectives of the Human Health Risk Assessment (HHRA) were as follows:

- To evaluate whether Site-related constituents detected in environmental media pose potentially unacceptable risks to potential human receptors
- To provide information to support decisions regarding need for further evaluation

This HHRA consists of a comparison of individual sample analytical results to default Human Health Screening Levels (HHSLs) (i.e., EPA RSLs). The most conservative HHSLs for residential use were used. In the context of the regulatory risk assessment process, potential effects of chemicals are separated into two types: carcinogenic and non-carcinogenic. This separation relates to current EPA policy where mechanisms of action for these endpoints differ. Contaminants of potential concern (COPCs) are evaluated for both carcinogenic and non-carcinogenic risks. If the maximum detected constituent concentration was less than its conservative screening criterion, the constituent was eliminated as a COPC. If the maximum detected constituent was less than three times the background, the constituent was eliminated as a COPC unless the contaminant is 2,3,7,8-tetrachlorodibenzo-p-dioxin (also known as dioxin) because background samples were not analyzed for this constituent. Results from COPCs that exceed screening levels and three times the background do not indicate an unacceptable risk. Rather, these results indicate the need for further evaluation in the risk assessment.

The Site consists of several Areas of Concern (AOC)/Exposure Areas as designated by the residents: the former Old Norwood Dump (Exposure Area 1), the former Norwood Sanitary Landfill (Exposure Area 2), and the Winona Homes neighborhood (Exposure Area 3) because of the unknown origin of fill used during construction.

To evaluate risk posed to human health based on exposure to contaminants present in environmental media, all samples collected by EPA from the Site from September through November 2020 as part of the ESI and in September 2017 and May 2018 as part of the SI were assessed with respect to this HHRA.

The 2020 sampling included the collection of shallow composite and grab surface soil samples (0.0 to 0.5 below ground surface [bgs]), subsurface (2 to 4 feet bgs) soil samples, and deep (8 to 10 feet bgs) subsurface soil samples (**Figures 5 and 6 and Tables 4 through 10** in the ESI report). Additionally, groundwater from temporary monitoring wells, surface water, and sediment samples were also collected (**Figure 5 and Tables 11 through 15** in the ESI report).

In 2017, EPA collected samples from Norwood Sanitary Landfill, Muckinipattis and Darby Creeks and in 2018, EPA collected surface soil samples from twenty-one residential properties in Winona Homes and surrounding neighborhoods. The sample location maps and analytical data summary tables for these sampling events are provided in **Appendix D** of this ESI report. **Figure 8** of this ESI report depicts the sample locations of all samples collected from the Norwood Landfill Site as part of the SI conducted in 2017 and 2018, and the ESI conducted in 2020.

Data for each sampling event was evaluated with respect to the background samples collected during that respective sampling event with the exception of the sediment samples collected from wetlands along Darby Creek as part of the 2020 sampling event. A background sediment sample was not collected from Darby Creek during the 2020 sampling event; therefore, these sediment samples were compared to the background sediment sample collected from Darby Creek in 2017. Additionally, residential soil samples collected in 2018 were compared to background residential soil samples collected in 2020. Also, background soil samples were compared to soil samples that were collected at the same comparable depth. For example, surface soil background samples were compared to surface soil samples.

Samples were analyzed for PAHs by means of SIM analysis to achieve lower detection limits and by routine SVOC analysis which has higher detection limits. PAHs are a subgroup of SVOCs. Because the SIM method has lower detection limits, PAHs may be detected in soil samples using the SIM method but not detected in the same sample when analyzed by the routine SVOC analysis method. To determine significance above

background for this HHRA, the highest concentrations of PAHs detected in the samples from either analysis was used. For instance, residential background sample SS-161 was not analyzed by SIM; therefore, the analytical results by routine SVOC analysis were used for comparison to residential soil samples collected from Exposure Area 3 (Winona Homes).

The current land use is a mix of residential, recreational (i.e., park), overgrown wooded areas, and the DELCORA pumping station. Future land use is not anticipated to change.

## 6.2 DATA SCREENING

The soil and groundwater analytical results that were detected at concentrations significantly above background were compared to EPA RSLs for residential soil and residential tap water (e.g., groundwater) based on target cancer risk of 1E-06 and target hazard quotient of 0.1 (Refs. 36). The surface water and sediment analytical results that were detected at concentrations significantly above background were compared to ten times the tap water and residential soil RSLs since surface water and sediment RSLs are not available and the exposure to sediment and surface water would likely be lower than exposure to tap water and soil. Additionally, groundwater samples were compared to EPA Vapor Intrusion Screening Levels (VISL) to evaluate potential risk associated with vapor intrusion from VOCs that may be present in groundwater. EPA RSLs/VISLs are generic risk-based concentrations that are intended to assist risk assessors in initial screening level evaluations. RSLs/VISLs combine human health toxicity values with standard exposure pathway (i.e., ingestion, dermal, and inhalation) factors to estimate contaminant concentrations in environmental media (soil, air, and water).

### 6.2.1 Soils

The following contaminants were above the data screening criteria described above in Section 6.2:

#### **Former Old Norwood Dump**

*Surface Soils:* benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, dioxin, manganese, mercury

*Subsurface Soils:* arsenic

### **Former Norwood Sanitary Landfill**

*Surface Soils:* benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, aroclor 1254, aroclor 1260, dioxin, antimony, arsenic, cobalt, iron, lead, manganese and dieldrin.

*Subsurface Soils:* benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, indeno(1,2,3-cd)pyrene, aroclor 1248, aroclor 1260, arsenic, cadmium, cobalt, copper, iron, lead, manganese, mercury, 4, 4,-DDD, aldrin and dieldrin.

### **Winona Homes**

*Surface Soils:* benzo(a)pyrene, indeno(1,2,3-cd)pyrene, aroclor-1254, arsenic, copper, dieldrin, cis-chlordane, trans-chlordane, heptachlor epoxide and aldrin.

*Subsurface Soils:* benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenz(a,h)anthracene, aroclor-1260, copper, lead and manganese.

*Deep Subsurface Soils:* arsenic, iron and vanadium.

## **6.2.2 Groundwater**

When comparing the maximum detected concentration in groundwater to EPA's tap water RSLs, the following contaminants were above screening levels and above background:

*Groundwater:* arsenic, cadmium, lead, and zinc.

## **6.2.3 Surface Water**

A conservative comparison of maximum concentrations in surface water from Muckinipattis Creek and Darby Creek to risk-based SLs was performed. The maximum concentrations of contaminants detected in surface water samples that were significantly above background did not exceed applicable RSLs; therefore, the data does not indicate human health concerns at the sampled locations.

## **6.2.4 Sediment**

A conservative comparison of maximum concentrations in sediment from Muckinipattis Creek and Darby Creek to risk-based screening levels was performed. The maximum concentrations of contaminants detected

in sediment samples at concentrations significantly above background did not exceed applicable RSLs; therefore, the data does not indicate human health concerns at the sampled locations.

### 6.3 STREAMEDLINED RISK ASSESSMENT

Contaminants that were above screening were assessed for risk using a streamlined risk assessment approach. The streamlined risk assessment sets an upper limit cancer risk of 5E-05 and a target hazard quotient of 0.5, to account for uncertainty since the RSLs are simplified risk calculations and do not incorporate full chemical and Site-specific exposure.

The potential cancer risks from exposure to chemicals were estimated by use of carcinogenic screening levels (SL) as demonstrated in Equation 1:

$$(1) \frac{\text{Exposure point concentration (EPC)}}{\text{Site Cancer Risk (CR)}} = \frac{\text{Carcinogenic SL}}{\text{RSL Risk (1E-06)}}$$

Carcinogenic risk (CR), in the RSL table, is set at a target cancer risk of 1E-06 as shown in Equation 1.

The potential non-carcinogenic risk from exposure to chemicals were estimated by use of non-carcinogenic screening level (SL) as demonstrated in Equation 2:

$$(2) \frac{\text{EPC}}{\text{Site Hazard Index (HI)}} = \frac{\text{Noncarcinogenic SL}}{\text{Hazard Quotient (0.1)}}$$

Non-carcinogenic risk is expressed as Hazard Quotient (HQ), which is set at a threshold of 1.0 or 0.1 if multiple contaminants are present, as shown in Equation 2.

To assess whether the existing COPCs identified in Section 6.2. may pose an unacceptable risk to receptors, the above Equations 1 and 2 were used to determine the overall site cancer risk (CR) and non-cancer risk (expressed as Hazard Index, HI) as summarized in the tables below. A screening-level risk assessment was performed using the same assumptions that are used to generate RSLs. The table below provides a summary of the cumulative CR and HI at each Exposure Area.

The screening level risk results do not indicate human health concerns and instead indicates a more detailed site-specific risk assessment be performed to determine the contaminant that is contributing to risk. See Section 6.4, Site-Specific Risk Assessment.

**Cumulative Streamlined Risk Results Table – Nonresidential**

| COPC                    | RSL (Cancer) | RSL (Noncancer) | Max Old Dump Surface | CR       | HI         | Max Old Dump Subsurface | CR       | HI  | Max Norwood Landfill Surface | CR             | HI         | Max Norwood Landfill Subsurface | CR             | HI         |

**Notes:**

**Bold** denotes an exceedance of EPA’s risk criteria

Screening risk assessment for Norwood Sanitary Landfill includes data collected in 2017.

Data compared to EPA RSLs for residential soil TR= 1E-06 (cancer) and HQ 0.1 (noncancer) (EPA 2021)

<sup>1</sup>The RSL values in table are for Chlordane

Units - µg/kg organics; mg/kg inorganics

µg/kg – micrograms per kilogram

mg/kg – milligrams per kilogram

COPC – Contaminant of Potential Concern

CR – Cancer Risk

HI – Hazard Index

NL – No listed value

RSL – Regional Screening Level

### 6.3.1 Soil

#### **Former Old Norwood Dump**

Surface soil has a non-cancer HI of 0.7, which is above the screening-level target hazard, HQ of 0.5. However, individual contaminant non-cancer risk is below the non-cancer threshold of 0.5 when evaluating risk using target organ specific analysis, (e.g., contaminants contributing to risk did not share the same target organ which indicated non-cancer risk is acceptable). Cancer risk from surface soil is CR of  $3.2E-05$  and for subsurface soil is CR of  $4.7E-06$ , which are both below the cancer screening-level of  $5E-05$ . Additionally, subsurface soil has a non-cancer HI of 0.1, which is below the streamlined target risk level.

#### **Former Norwood Sanitary Landfill**

Surface and subsurface soils have a non-cancer HI of 5.4 and 7.6, respectively, which are above the screening-level target hazard, HQ of 0.5. Cancer risk from surface and subsurface soils are  $3.5E-04$  and  $1.4E-04$  (surface and subsurface soils, respectively), which are above the cancer screening-level of  $5E-05$ . Following EPA guidelines, risk exceedance indicates a more detailed site-specific risk assessment should be performed to assure the appropriate receptors and site-specific information is included in the risk assessment analysis. The results from the site-specific assessment are located in the next section, Section 6.4.

#### **Winona Homes**

Surface soils (grab or composite), shallow subsurface, and deep subsurface soil had non-cancer HIs of 2.9, 1.3, and 1.6, respectively, which are above the screening-level target hazard, HQ of 0.5. Cancer risk from surface soil (grab or composite) had a cancer risk of  $2.4E-4$ , which is above the cancer screening level of  $5E-05$ . Cancer risk from subsurface soil, CR  $3E-05$ , and deep subsurface soil,  $7.9E-06$ , are below the cancer screening-level of  $5E-05$ . Following EPA guidelines, risk exceedance indicates a more detailed site-specific risk assessment should be performed to assure the appropriate receptors and site-specific information is included in the risk assessment analysis. The results from the site-specific assessment are located in the next Section 6.4 and Attachment 2.

### 6.3.2 Groundwater

Groundwater cancer risk is below the cancer screening level with a CR of  $4.8E-05$  and non-cancer risk exceeds the screening-level target hazard, HI of 1.1. However, individual contaminant non-cancer risk is below the non-cancer threshold of 0.5 for all individual contaminants. However, there are no

targets/receptors associated with groundwater because groundwater is not used for drinking within 4-miles of the Site.

**Cumulative Streamlined Risk Results Table – Groundwater**

| Contaminant of Potential Concern (COPC) | Concentration (ug/L) | Tap water RSL (Non-cancer, HQ=0.1) | Tapwater RSL (Cancer) | Non-cancer Risk (HI) | Cancer Risk (CR) |
|---|----------------------|------------------------------------|-----------------------|----------------------|------------------|
| Arsenic                                 | 2.5                  | 0.6                                | 5.2E-02               | 0.42                 | 4.8E-05          |
| Cadmium                                 | 2.9                  | 0.92                               | NL                    | 0.32                 |                  |
| Lead                                    | 37.9                 | 15                                 | NL                    |                      |                  |
| Zinc                                    | 833                  | 600                                | NL                    | 0.14                 |                  |
| <b>Cumulative Risk</b>                  |                      |                                    |                       | <b>1.1</b>           | 4.8E-05          |

**Notes:**

**Bold** denotes an exceedance of EPA's risk criteria

Data compared to EPA RSLs for residential soil TR= 1E-06 (cancer) and HQ 0.1 (noncancer) (EPA 2021)

µg/L – micrograms per liter

COPC – Contaminant of Potential Concern

NL – No listed value

RSL – Regional Screening Level

CR – Cancer Risk

HI – Hazard Index

As shown on **Table 11**, low-level of VOCs such as chloroform, chloromethane, 1,2-cis-dichloroethene, xylene, methyl tert-butyl ether, tetrachloroethane, and trichloroethene were detected in groundwater samples; however, the detected concentrations are below EPA Residential VISLs and thus were not included in the above streamlined risk evaluation.

### 6.3.3 Surface Water

A conservative comparison of maximum concentrations in surface water from Muckinipattis Creek and Darby Creek to risk-based SLs was performed. The maximum concentrations of contaminants detected in surface water samples that were significantly above background did not exceed applicable RSLs; therefore, the data does not indicate human health concerns at the sampled locations.

### 6.3.4 Sediment

A conservative comparison of maximum concentrations in sediment from Muckinipattis Creek and Darby Creek to risk-based screening levels was performed. The maximum concentrations of contaminants detected in sediment samples at concentrations significantly above background did not exceed applicable RSLs; therefore, the data does not indicate human health concerns at the sampled locations.

## 6.4 SITE-SPECIFIC RISK ASSESSMENT

EPA performed site-specific risk assessments at identified exposure areas where risk (non-cancer or cancer) was exceeded. During the site-specific risk assessment, EPA sets the acceptable cancer risk between 1E-6 to 1E-4 (or less) and the acceptable target hazard quotient (noncancer risks) is 1 or less. It is important to note, the set target non-cancer and cancer criteria for the site-specific risk assessment is not the same target screening-level criteria set in the streamlined risk assessment. As stated in Section 6.3, the set target criteria during the streamlined risk evaluation are more conservative since the evaluation is not site-specific. In addition, since all soils results were compared to residential screening levels, the most conservative receptor to evaluate, the site-specific risk assessment more clearly determines if a pathway is complete or incomplete for an identified receptor.

The following are the site-specific risk results:

### **Former Old Norwood Dump**

A site-specific risk assessment was not performed at the former Old Norwood Dump because the streamlined risk results, non-cancer and cancer, were found to be below EPA's acceptable criteria.

### **Former Norwood Sanitary Landfill**

A site-specific risk assessment was performed at the former Norwood Sanitary Landfill since the streamlined risk results exceeded the non-cancer and cancer target screening level.

Risk was calculated using the maximum detected surface soils concentration identified in soil samples collected during both the 2020 ESI and the 2017 SI (**Tables 4, 5, 6, and 7 and Appendix D**). Although residential housing is located adjacent to the landfill, there are no residential structures on the landfill; therefore, this represents an incomplete exposure pathway to resident. However, adult workers and teenage visitors/recreators/trespassers could come into contact with the surface soils representing a complete exposure pathway. Therefore, risks were calculated for the adult workers and teenage visitors/recreators/trespassers.

As shown in the table below, when evaluating risk from surface soil exposure to adult worker and teenage-visitor/recreator/trespasser all risk is acceptable with the exception of cancer risks to the teenage-visitor/recreator/trespasser from chromium due to a single maximum detection of 234 mg/kg at location SS-43. The next highest chromium detection is 42.4 mg/kg at location SS-44. When assessing risk using the second highest detection of 42.4 mg/kg, risks to teenage visitors/recreators/trespassers are within or at EPA's

acceptable risk criteria. It should be noted, all chromium concentrations in landfill surface soils were within background surface soil concentrations, with the exception of these two sampling locations.

As noted in Section 6.5, when performing the site-specific risk assessment, 100 % of chromium is assumed to present in its hexavalent form. This is done to error on the side of conservatism since hexavalent chromium is carcinogenic, even though chromium is most commonly present in its less toxic trivalent form. EPA recommends chromium speciation to verify the presence and levels of chromium.

**Former Norwood Sanitary Landfill Surface Soil Table**

| COPC's based on screening to RSL's | EPC/Maximum Detected Value Above Background (mg/kg) | Worker HI | Worker Cancer Risks | Visitor Recreator Trespasser HI | Teenage Visitor Recreator Trespasser Cancer Risks |
|------------------------------------|---|-----------|---------------------|---------------------------------|---|

**Bold** denotes an exceedance of EPA's risk criteria.

### Winona Homes

A site-specific risk assessment was performed at the Winona Homes since the streamlined risk results exceeded the non-cancer and cancer target screening level.

Risk was calculated using the maximum detected concentrations for surface soils (composite and grab), shallow subsurface and deep subsurface soils. Individual risk assessments on the residential properties within the Winona Homes neighborhood, that were sampled as part of the ESI, were assessed for risk. EPA default

exposure parameters for the Adult, Child and Lifetime Resident were used to calculate risk. (**Attachment 2**).

EPA's evaluation concluded, for all samples with total risk at or above the lifetime CR level of concern, the CR was almost entirely due to chromium. Since chromium speciation was not performed, it is uncertain if chromium is present in the trivalent or hexavalent form (or combination). If the chromium is not completely hexavalent, then the risk would be considerably lower. Moreover, even if chromium presence is entirely hexavalent, it appears these levels of chromium are consistent with background, with the exception of five residential properties. The Toxicologist recommended conducting additional sampling at these five residential properties for chromium speciation. Two additional properties had total risk at or above the lifetime CR level of concern for chromium; however, the property samples containing the elevated concentrations of chromium were collected at depths of 8 to 10 feet bgs, presenting an incomplete exposure pathway to current residents. One additional property exceeds EPA's non-cancer threshold for manganese for a sample collected at depths of 2 to 4 feet bgs. EPA will update the individual risk assessments at these properties based on the results of the additional sampling.

Individual residential risk results were sent to property owners and cannot be discussed in this report due to privacy laws. However, the overall risk results for the Winona neighborhood were found to be within EPA's acceptable risk criteria or within background concentrations.

## 6.5 UNCERTAINTIES AND DATA GAPS

The streamlined risk assessment screening processes used was conservative and simplified approach therefore some degree of uncertainty is associated with the results. The intent is to bias any estimates high to ensure protectiveness. Soil samples were not collected throughout the entire former Norwood Sanitary Landfill due to accessibility from overgrown brush and fallen trees. Samples were analyzed for total chromium. For HRS purposes, chromium is evaluated assuming 100% of chromium is present in the trivalent form, unless hexavalent chromium was known to be present or there is information to suggest it could be present on Site. Therefore, the streamlined risk assessment performed was based on RSL values for trivalent chromium. However, when performing risk assessments at NPL Superfund Sites, chromium is evaluated assuming 100% of chromium is present in the more toxic hexavalent form. This is a conservative approach to ensure all potential risks are captured in the assessment. If hexavalent chromium exceeds risk, chromium speciation is recommended to determine how much hexavalent chromium is present, if any.

For the groundwater, surface water, and sediment streamlined risk assessment process, COPCs were identified IF the detected concentration was three times background (or above the background CRQL if the

background concentration was nondetect) AND if that COPC had ALSO been detected in the source (i.e., soil) samples. Therefore, the VOCs detected in the groundwater samples were not included in the risk assessment because these constituents were not detected in collected soil samples. However, the analytical results were compared to EPA VISLs and were found to be below screening levels.

EPA has developed alternative methods to evaluate the potential risk associated with exposure to lead that predicts blood lead (PbB) levels based on exposure and then compares those levels with PbB levels considered protective of human health. The Integrated Exposure Uptake Biokinetic (IEUBK) Model was developed by EPA to estimate the probability of elevated PbB concentrations in children. The IEUBK model was used to calculate EPA's residential soil lead RSL of 400 mg/kg, and the Adult Lead Methodology was used to calculate EPA's industrial soil lead RSL of 800 mg/kg (Ref. 31). Since the lead RSLs are not based on reference dose, a non-carcinogenic HI was not calculated for the Exposure Areas where lead concentrations exceed the RSL. Additionally, EPA is in the process of updating its lead in soil policy and in the interim recommends using a target blood lead level of 5 ug/dl, which equates to a residential soil screening level of 200 mg/kg. Therefore, this lead soil screening value was also considered during this risk evaluation.

Some chemicals are members of the same family and exhibit similar toxicological properties; however, they differ in the degree of toxicity. Therefore, for dioxin, a toxicity equivalence factor (TEF) was applied to adjust the measured concentrations to a toxicity equivalent concentration.

EPA has identified seven carcinogenic PAHs as also being potential mutagens that added together may exceed the risk and hazard level: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. However, per the methods described in Section 6.2, each maximum PAH that is considered a CPOC was evaluated separately for simplicity. In a full evaluation of human risk and hazards, all seven detected carcinogenic PAHs for each individual property would be evaluated together based on a calculated benzo(a)pyrene toxicity equivalence factor for each carcinogenic PAH.

## 6.6 HUMAN HEALTH RISK ASSESSMENT CONCLUSIONS

Surface, shallow subsurface, and deep subsurface soil as well as groundwater, surface water, and sediment samples were collected throughout the identified exposure areas including 70 residential properties within and surrounding Winona Homes. Concentrations that were detected significantly above background (i.e., three times background) were compared to EPA's RSL's and those contaminants that were above RSL's

were assessed for risk using a streamlined risk approach. If the streamlined risk results exceeded the set target screening level, a site-specific risk assessment was conducted.

Risk at the former Old Norwood Dump was found to be below or within EPA's acceptable risk criteria. Risk at the former Norwood Sanitary Landfill exceeded EPA's cancer target risk criteria due to chromium. However, the concentration of chromium contributing to risk is an isolated detection that appears as an outlier compared to other landfill chromium detections. When assessing risk using the next highest concentration, all risk results are below or within EPA's acceptable criteria. In addition, chromium was evaluated assuming it was entirely present in the hexavalent form, which offers an extremely conservative estimate of risk.

Risk at the Winona Homes were also found to be below or within EPA's acceptable risk criteria and/or background concentrations with the exception of five residential properties where hexavalent chromium exceeded risk. The EPA toxicologist recommends chromium speciation be performed to determine the state (trivalent and/or hexavalent) and concentrations of chromium present.

Two additional properties had total risk at or above the lifetime CR level of concern for chromium; however, the samples containing the elevated concentrations of chromium at these properties were collected at depths of 8 to 10 feet bgs presenting an incomplete exposure pathway to current residents. One additional property exceeds EPA's non-cancer threshold for manganese for a sample collected at depths of 2 to 4 feet bgs. EPA will update the individual risk assessments at these properties based on the results of the additional sampling.

Groundwater risk was found to be below or within EPA's acceptable risk criteria. Additionally, potable groundwater is an incomplete exposure pathway to residents and vapor intrusion from groundwater was not identified since all volatile concentrations were below screening.

No risk was identified associated with surface water and sediment. Arsenic concentrations in surface water and sediment exceeded EPA's RSL's; however, the concentrations detected were similar to background.

## 7.0 ECOLOGICAL RISK EVALUATION

### 7.1 INTRODUCTION

The purpose of this section is to evaluate potential ecological risks associated with exposure to Site-related constituents where ecological receptors may be exposed to surface water and sediment. The objectives of the preliminary ecological risk evaluation were as follows:

- To evaluate whether Site-related constituents detected in surface water and sediment samples pose potentially unacceptable risks to potential ecological receptors
- To provide information to support decisions regarding need for further evaluation

This preliminary ecological risk evaluation consists of a comparison of surface water and sediment analytical results to ecological screening values (ESVs). If the maximum detected constituent concentration was less than its ESV, the constituent was eliminated as of potential ecological concern (COPEC). Results from COPECs that exceed screening levels do not in themselves indicate an unacceptable risk. Rather, these results indicate need for further evaluation in the risk assessment.

In September 2020, surface water and sediment samples were collected from the Muckinipattis Creek and Darby Creek (**Tables 13 through 15** of this ESI report). In addition to the recent sampling, EPA had previously collected surface water and sediment samples from Muckinipattis Creek and Darby Creek in 2017 (**Appendix D** of this ESI report) (Ref. 5). For this preliminary ecological risk evaluation, data from all sampling events were evaluated with consideration to significance above the highest background concentrations for each surface water body (NL-2017-SW-01 and NL-2020-SW-13 for Muckinipattis Creek; and NL-SW-2017-03 for Darby Creek). COPECs considered for surface water and sediment only included those contaminants that were also detected in the soil samples collected from the source/exposure areas at concentrations significantly above background (i.e., documented and observed release).

As discussed in **Section 3.3.3** of this ESI, and shown in **Figures 1 and 4**, John Heinz National Wildlife Refuge is located along Darby Creek directly across from the Site. John Heinz National Wildlife Refuge consists of a freshwater tidal marsh that encompasses roughly 285 acres (Ref. 22). Anadromous fish use the tidal streams and rivers and its side channels as nursery habitat for juveniles. Additionally, numerous waterfowl and shorebirds utilize the open water habitats along Darby Creek for migratory stopovers (Ref. 22).

The table below lists the state and federally listed threatened or endangered species known to occur at John Heinz National Wildlife Refuge (Ref. 22).

| Common Name                         | Scientific Name                                | Status       |
|-------------------------------------|--|--------------|
| Least bittern                       | <i>Ixobrychus exilis</i>                       | Endangered-s |
| Yellow-crowned night heron          | <i>Nyctanassa violacea</i>                     | Endangered-s |
| Common tern                         | <i>Sterna hirundo</i>                          | Endangered-s |
| Black tern                          | <i>Chlidonias niger</i>                        | Endangered-s |
| King Rail                           | <i>Rallus elegans</i>                          | Endangered-s |
| Short-eared owl                     | <i>Asio flammeus</i>                           | Endangered-s |
| Loggerhead shrike                   | <i>Lanius ludovicianus</i>                     | Endangered-s |
| Eastern mud turtle                  | <i>Kinosternon subrubrum</i>                   | Endangered-s |
| Northern diamond back terrapin      | <i>Malaclemys terrapin</i>                     | Endangered-s |
| Southern coastal plain leopard frog | <i>Lithobates sphenoccephalus utricularius</i> | Endangered-s |
| Eastern red-belly turtle            | <i>Pseudemys rubriventris</i>                  | Threatened-s |
| Piping plover                       | <i>Charadrius melodus</i>                      | Endangered-f |

**Notes:**

f – Federal

s – State

Additionally, bald eagles (*Haliaeetus leucocephalus*), a former federally listed endangered species that has recovered and been delisted, have historically utilized the refuge for hunting and roosting. The first known bald eagle nest on the refuge was built in 2009 and the first two refuge eaglets successfully hatched in 2010. The pair has returned to breed on the refuge every year since (Ref. 22).

In addition to the federal or state listed threatened or endangered species observed at John Heinz National Wildlife Refuge, three federally listed threatened or endangered species, the Atlantic sturgeon (*Acipenser oxyrinchus*), the bog turtle (*Glyptemys muhlenbergii*), and the sensitive joint-vetch (*Aeschynomene virginica*), are known to occur within Delaware County, along with more than 50 state listed threatened and endangered species including the peregrine falcon (*Falco peregrinus*), the osprey (*Pandion haliaetus*), several additional birds, turtles, and many plants associated with wetland and marshy habitats (Ref. 23).

Portions of the former Old Norwood Dump and former Norwood Sanitary Landfill are immediately adjacent to areas classified as a freshwater emergent wetland and a freshwater forested/shrub wetland (**Figure 4**; Ref. 24). A total of approximately 14.04 miles of wetland frontage are located along Muckinipattis Creek (0.19 mile), Darby Creek (2.58 miles), and Delaware River (11.27 miles) along the 15-mile TDL in the Delaware River (Ref. 24).

## 7.2 DATA SCREENING

The surface water and sediment analytical results that were detected at concentrations significantly above background were compared to EPA Region 3 Biological Technical Assistance Group (BTAG) freshwater screening values (Refs. 32).

The primary objective of the preliminary ecological risk evaluation is to identify COPEC and provide a conservative evaluation of potential for adverse ecological effects related to constituent concentrations in environmental media.

The ecological risks (i.e., hazard quotient [HQ]) associated with potential exposure to chemicals were estimated by use of comparison of the maximum detected concentrations of constituents in exposure media (i.e., EPC) to the EPA Region 3 BTAG screening benchmark (i.e., ESV) as noted in the equation below:

$$HQ = \frac{EPC}{ESV}$$

The HQ threshold value of 1 was used to identify COPECs. Generally, the greater the HQ, the greater the likelihood an effect will occur. Although probabilities cannot be specified based on a point-estimate approach, an HQ of approximately 1 is generally regarded as indicating a low probability of adverse ecological effects. When a constituent has an HQ greater than 1, it is present at levels above its threshold concentration; however, this does not imply that adverse effects will occur—only that adverse effects could occur.

### 7.2.1 Surface Water

A conservative comparison of maximum concentrations to ecological screening values was performed. As previously stated, surface water analytical results were compared to EPA Region 3 BTAG screening benchmarks for freshwater. The COPECs in surface water samples (copper and lead) were detected at concentrations significantly above background and in exceedance of the applicable ESV in one surface water sample collected from Darby Creek.

To assess whether the existing contamination may pose an unacceptable risk to ecological receptors, the equation in Section 7.2 was used to determine the HQ associated with each COPEC as summarized in the table below.

### Ecological Screening Risk – Surface Water

| Analyte Name                | Maximum Concentration | Units | Location of Maximum Concentration | Number of Samples Exceeding the Screening Value/<br>Number of Samples <sup>1</sup> | Screening Value | Hazard Quotient |
|-----------------------------|-----------------------|-------|-----------------------------------|--|-----------------|-----------------|
| Surface Water - Darby Creek |                       |       |                                   |  |                 |                 |
| Copper                      | 15                    | µg/l  | NL-2017-SW-11                     | 1/1  | 9               | 1.67            |
| Lead                        | 25                    | µg/l  | NL-2017-SW-11                     | 1/1  | 2.5             | 8.33            |

Notes:

<sup>1</sup> Only includes locations where an observed release has been documented

Preliminary ecological risk evaluation for Norwood Landfill includes data collected in 2017.

Screening values are EPA R3 BTAG values for freshwater and freshwater sediment (EPA, 2009)

BTAG - Biological Technical Assistance Group

µg/l = micrograms per liter

The surface water has a HQ above 1. This simple screening does not mean that adverse ecological risks will occur; however, it is an indication that further evaluation of the Site may be warranted. Additionally, surface water samples were unfiltered and may be directly comparable to screening criteria.

#### 7.2.2 Sediment

A conservative comparison of maximum concentrations to ecological screening values was performed. As previously stated, sediment analytical results were compared to EPA Region 3 BTAG screening benchmarks for freshwater sediment. The COPECs in sediment samples collected from Muckinipattis Creek include cadmium, chromium, copper, mercury, nickel, silver, and zinc and from Darby Creek include copper that were detected at concentrations significantly above background and in exceedance of the applicable ESV.

To assess whether the existing contamination may pose an unacceptable risk to ecological receptors, the equation in Section 7.2 was used to determine the HQ associated with each COPEC as summarized in the table below.

### Ecological Screening Risk – Sediment

| Analyte Name                          | Maximum Concentration | Units | Location of Maximum Concentration | Number of Samples Exceeding the Screening Value/<br>Number of Samples <sup>1</sup> | Screening Value | Hazard Quotient |
|---------------------------------------|-----------------------|-------|-----------------------------------|--|-----------------|-----------------|
| <b>Sediment - Muckinipattis Creek</b> |                       |       |                                   |  |                 |                 |
| Cadmium                               | 8.6                   | mg/kg | NL-2020-SD-20                     | 1/1  | 0.99            | 8.67            |
| Chromium                              | 907                   | mg/kg | NL-2020-SD-20                     | 1/1  | 43.3            | 20.9            |
| Copper                                | 364                   | mg/kg | NL-2020-SD-20                     | 1/1  | 31.6            | 11.52           |
| Mercery                               | 2                     | mg/kg | NL-2020-SD-20                     | 2/2  | 0.8             | 2.5             |
| Nickel                                | 976                   | mg/kg | NL-2020-SD-20                     | 1/1  | 22.7            | 42.99           |
| Silver                                | 40                    | mg/kg | NL-2020-SD-20                     | 2/2  | 1               | 40              |
| Zinc                                  | 1,560                 | mg/kg | NL-2020-SD-20                     | 1/1  | 121             | 12.89           |
| <b>Sediment - Darby Creek</b>         |                       |       |                                   |  |                 |                 |
| Copper                                | 288                   | mg/kg | NL-2020-SD-22                     | 1/1  | 43              | 6.7             |

Notes:

<sup>1</sup> Only includes locations where an observed release has been documented

Preliminary ecological risk evaluation for Norwood Landfill includes data collected in 2017.

Screening values are EPA R3 BTAG values for freshwater and freshwater sediment (EPA, 2009)

BTAG - Biological Technical Assistance Group  
mg/kg = milligrams per kilogram

The sediment for Muckinipattis and Darby Creeks have a HQ above 1. This simple screening does not mean that adverse ecological risks will occur; however, it is an indication that further evaluation of the Site may be warranted.

### 7.3 UNCERTAINTIES AND DATA GAPS

The screening processes used here are conservative and simplified, and therefore are associated with high uncertainty. The intent is to bias any estimates high to ensure protectiveness.

Sediment samples SD-16, SD-19, and SD-20 were collected from upland wetlands influenced by Muckinipattis Creek adjacent to Old Norwood Dump. These samples may not be indicative of sediment quality within Muckinipattis Creek or risk to ecological receptors within the creek.

Sediment samples SD-21, SD-22, and SD-23 were collected from upland wetlands influenced by Darby Creek adjacent to Norwood Landfill. These samples may not be indicative of sediment quality within Darby Creek or risk to ecological receptors within the creek.

## 7.4 CONCLUSIONS

Based on the results presented in **Section 7.2**, the following observations and conclusions are presented:

- An ecological risk associated with Muckinipattis Creek surface water was not indicated based on collected data.
- Contamination in Muckinipattis Creek is limited to one sediment sample, SD-20, which contained concentrations of several metals such as cadmium, chromium, copper, mercury, nickel, silver, and zinc. This sample was collected within wetlands along Muckinipattis Creek adjacent to the former Old Norwood Dump. As stated in Section 7.3, this sediment sample was collected from an upland wetland area and may not be indicative of sediment quality within Muckinipattis Creek.
- Contamination in Darby Creek is limited to one sediment sample, SD-22, which contained copper and one surface water sample, SW-11, which contained copper and lead. As stated in Section 7.3, this sediment sample was collected from an upland wetland area and may not be indicative of sediment quality within Darby Creek.

## 8.0 SUMMARY AND CONCLUSIONS

The Norwood Landfill Site consists of the former Old Norwood Dump, the former Norwood Sanitary Landfill, and areas where fill was used during construction of the Winona Homes neighborhood. Portions of the former Old Norwood Dump and former Norwood Sanitary Landfill are adjacent to the Muckinipattis Creek and Darby Creek. Several investigations by USFWS and EPA have been conducted on various portions of the Site between 1993 and 2020. As part of the most recent investigation conducted in 2020, surface, shallow subsurface, and deep subsurface soil as well as groundwater, surface water, and sediment samples were collected throughout the identified areas of concern including from 70 residential properties within and surrounding Winona Homes. The data from these investigations have been reviewed to assess the threats, if any, posed to public health, welfare, or the environment; and to determine if further investigation under the CERCLA is warranted.

Surface and shallow subsurface soil samples collected from the former Old Norwood Dump detected PAHs, metals, and pesticides at concentrations significantly above background. Additionally, a soil sample collected along the boundary of the landfill and access road detected concentrations of dioxins/furans. Portions of the former Old Norwood Dump are accessible to the public and is used by adults and children for recreation such as hiking, exploration, and dog walking; however, the area is not an official designated recreational use area. A section of the former Old Norwood Dump is the current location of DELCORA and contained within a gated fence. Persons who frequent the wooded former Old Norwood Dump may potentially come into contact with contaminated surface soil. Streamlined risk results of the COPC in the soils at the Old Norwood Dump were found to be below EPA's acceptable criteria.

Surface and shallow subsurface soil samples collected from the former Norwood Sanitary Landfill detected PAHs, PCBs, metals, and pesticides at concentrations significantly above background. Additionally, a soil sample collected along the boundary of the landfill and access road detected concentrations of dioxins/furans. The former Norwood Sanitary Landfill is a heavily wooded area accessible to the public and is used by adults and children for recreation such as hiking, exploration, and dog walking; however, the area is not an official designated recreational use area. Persons who frequent the wooded former Norwood Sanitary Landfill may potentially come into contact with contaminated surface soil. Streamlined risk results for both surface and subsurface soil as well as both cancer and noncancer effects were above screening criteria. Based on the results of the streamlined risk screening, EPA conducted a site-specific risk assessment for the surface soil at the former Norwood Sanitary Landfill. The site-specific risk at the Norwood Sanitary Landfill exceeded EPA's cancer target risk criteria due to chromium. However, the concentration of chromium contributing to risk is an isolated detection that appears to be an outlier compared to other landfill

chromium detections. When assessing risk using the next highest concentration, all risk results are below or within EPA's acceptable criteria. In addition, chromium was evaluated assuming it was entirely present in the hexavalent form, which offers an extremely conservative estimate of risk.

At least one PAH, PCB, pesticide, and/or inorganic were detected at concentrations significantly above background (based on comparable background samples analyzed by SIM) from 39 of the 57 properties within Winona Homes. Thirteen of the 39 properties with concentrations significantly above background also exceeded EPA RSLs for residential soil. Of the thirteen properties with soil exceedances of the EPA RSL for residential soil, contaminants were detected in surface soil at eight properties, in shallow subsurface soil at two properties, and in deep subsurface soil at three properties. Streamlined risk results of surface soils (grab or composite), shallow subsurface, and deep subsurface soil were above screening level criteria for noncancer effects. Additionally, streamlined risk results for surface soil were above screening criteria for cancer effects. Following EPA guidelines, screening level risk exceedance indicates a more detailed site-specific risk assessment should be performed to assure the appropriate receptors and site-specific information is included in the risk assessment analysis. The site-specific risk at the Winona Homes were found to be below or within EPA's acceptable risk criteria and/or background concentrations with the exception of five residential properties where chromium exceeded risk when the chromium concentrations is assumed to be all hexavalent chromium. The EPA toxicologist recommends chromium speciation be performed to determine the state (trivalent and/or hexavalent) and concentrations of chromium present. Two additional properties had risk above the level of concern for chromium; however, the samples containing the elevated concentrations of chromium at these properties were collected at depths of 8 to 10 feet bgs presenting an incomplete exposure pathway to current residents. One additional property exceeds EPA's non-cancer threshold for manganese for a sample collected at depths of 2 to 4 feet bgs. The average resident is not anticipated to be exposed to soil below 2-feet bgs. Potential exposure to contaminants associated with those five properties would be construction workers, industrial workers or any persons digging below 2-feet bgs.

Groundwater samples collected from temporary wells contained VOCs and metals at concentrations significantly above background. However, of the VOCs and metals detected in the groundwater samples, lead was the only contaminant that was also detected in soil samples at concentrations significantly above background indicating that the detected VOCs and other metals in groundwater are not originating from the possible sources (contaminated soil associated with the former Norwood Sanitary Landfill, former Old Norwood Dump, and Winona Homes neighborhood) investigated as part of this ESI. Groundwater risk was found to be below or within EPA's acceptable risk criteria. Additionally, potable groundwater is an

incomplete exposure pathway to residents and vapor intrusion from groundwater was not identified since all volatile concentrations were below screening.

One surface water sample collected from Darby Creek contained copper and lead at concentrations significantly above background. These contaminants were also detected in soil samples at concentrations significantly above background. One sediment sample from Muckinipattis Creek detected cadmium, copper, mercury, nickel, silver, and zinc at concentrations significantly above background and one sample from Darby Creek contained copper at a concentration significantly above background. These contaminants were also detected in soil samples at concentrations significantly above background. The concentrations of COPCs in the surface water and sediment samples did not exceed human health risk screening levels; however, concentrations were above ecological screening-level site hazard. Potential receptors associated with the surface water migration pathway include the sensitive environments such as the numerous states and federally listed threatened and/or endangered species known to occur at the nearby John Heinz National Wildlife Refuge and the identified wetlands along the Muckinipattis and Darby Creeks. Additionally, the potential exists for the public to catch and eat fish, which may have been exposed to sediments contaminated with hazardous substances such as mercury originating from the Site. The Muckinipattis and Darby Creeks are located in an urban setting and receive surface water runoff from asphalt roadways. Additionally, numerous EPA-regulated facilities are located upstream of the Site along the Muckinipattis and Darby Creek, including a large tank farm and the Lower Darby Creek Area Superfund Site.

When considering the number of properties in Winona Homes where contaminants were detected at levels significantly above that which were detected in the surrounding neighborhoods, the variation from property to property in types of contaminants detected above background, and the absence of similar elevated contaminants at all depths of soil throughout the neighborhood, the data does not appear consistent with fill soil contaminated by one particular source and spread across the neighborhood. Additionally, the concentrations of most contaminants found in samples were not detected at levels that would present an unacceptable risk to human health over a lifetime at a majority of the homes sampled. There are numerous sources of contaminants present in this semi-urban neighborhood ranging from those generated by activities at the individual property level over the course of the last 60 years, such as pesticide application or runoff from asphalt roofs and driveways, to the regional level such as proximity to major highways and an airport where aerial deposition of contaminants such as PAH's may be occurring. It is important for the community to recognize that some contaminants may exist in the surface and subsurface soil of their yards that could be naturally occurring or a result of numerous non-point sources in the surrounding urban environment and have an understanding that the likelihood of developing adverse health conditions due to potential exposure to those contaminants in the soil is expected to be very low. However, to further refine its human health risk

screening evaluation, EPA plans to collect additional samples at several residences for chromium speciation analysis.

**Notes:**

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ.0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PAH = polycyclic aromatic hydrocarbon

Q = Qualifier

QC = Quality control

SIM = selective ion monitoring

SVOC = semivolatile organic compound

TR = Target Risk

VOC = volatile organic compound

**Notes:**  
Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).  
Bold values indicate exceedance of residential RSL.  
Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.  
R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.  
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.  
UI = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram  
CLP = Contract Laboratory Program  
HQ = Hazard Quotient  
NL = No listed value  
PAH = polycyclic aromatic hydrocarbon  
Q = Qualifier  
QC = Quality control  
SIM = selective ion monitoring  
SVOC = semivolatle organic compound  
TR = Target Risk  
VOC = volatile organic compound

**Notes:**  
Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ,0.1 (EPA, 2020).  
Bold values indicate exceedance of residential RSL.  
Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.  
R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.  
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.  
UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram  
CLP = Contract Laboratory Program  
HQ = Hazard Quotient  
NL = No listed value  
PAH = polycyclic aromatic hydrocarbon  
Q = Qualifier  
QC = Quality control  
SIM = selective ion monitoring  
SVOC = semivolatle organic compound  
TR = Target Risk  
VOC = volatile organic compound

**Notes:**

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

NI = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PAH = polycyclic aromatic hydrocarbon

Q = Qualifier

QC = Quality control

SIM = selective ion monitoring

SVOC = semivolatle organic compound

TR = Target Risk

VOC = volatile organic compound

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

Notes:

<sup>1</sup> The RSL value is for 2,3,7,8-TCDD

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

J = Reported value is estimated; actual value may be higher or lower

Q = Qualifier

Z = The isomer was identified with an ion ratio outside the 15% theoretical ion abundance ratio; the associated numerical value is reported as the Estimated Maximum Possible Concentration (EMPC) and is considered estimated

ng/kg =nanograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

Composite samples were not analyzed for VOCs.  
Samples CS-116, CS-140, and CS-169 were not analyzed for PAHs by SIM due to elevated PAHs detected during routine SVOC analysis  
Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)  
Bold values indicate exceedance of residential RSL  
Red values indicate 3x background values (or above background RDL if background is non-detect)  
Unshaded columns are grab surface soil samples  
Gray shaded columns are composite surface soil samples  
Orange shaded columns are shallow subsurface soil samples  
Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower  
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit

µg/kg = micrograms per kilogram  
µg/kg = micrograms per kilogram  
CLP = Contract Laboratory Program  
HQ = Hazard Quotient  
NL = No listed value  
PAH = polycyclic aromatic hydrocarbon  
Q = Qualifier  
SIM = selective ion monitoring  
SVOC = semivolatile organic compound  
TR = Target Risk  
VOC = volatile organic compound

Notes:

- Composite samples were not analyzed for VOCs.
- Samples CS-116, CS-140, and CS-169 were not analyzed for PAHs by SIM due to elevated PAHs detected during routine SVOC analysis
- Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)
- Bold values indicate exceedance of residential RSL
- Red values indicate 3x background values (or above background RDL if background is non-detect)
- Unshaded columns are grab surface soil samples
- Gray shaded columns are composite surface soil samples
- Orange shaded columns are shallow subsurface soil samples
- Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower  
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit

µg/kg = micrograms per kilogram  
µg/kg = micrograms per kilogram  
CLP = Contract Laboratory Program  
HQ = Hazard Quotient  
NL = No listed value  
PAH = polycyclic aromatic hydrocarbon  
Q = Qualifier  
SIM = selective ion monitoring  
SVOC = semivolatile organic compound  
TR = Target Risk  
VOC = volatile organic compound

**Notes:**  
Composite samples were not analyzed for VOCs.  
Samples CS-116, CS-140, and CS-169 were not analyzed for PAHs by SIM due to elevated PAHs detected during routine SVOC analysis  
Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ.0.1 (EPA, 2020)  
Bold values indicate exceedance of residential RSL  
Red values indicate 3x background values (or above background RDL if background is non-detect)  
Unshaded columns are grab surface soil samples  
Graty shaded columns are composite surface soil samples  
Orange shaded columns are shallow subsurface soil samples  
Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower  
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit

µg/kg = micrograms per kilogram  
µg/kg = micrograms per kilogram  
CLP = Contract Laboratory Program  
HQ = Hazard Quotient  
NL = No listed value  
PAH = polycyclic aromatic hydrocarbon  
Q = Qualifier  
SIM = selective ion monitoring  
SVOC = semivolatle organic compound  
TR = Target Risk  
VOC = volatle organic compound

**Notes:**  
Composite samples were not analyzed for VOCs.  
Samples CS-116, CS-140, and CS-169 were not analyzed for PAHs by SIM due to elevated PAHs detected during routine SVOC analysis  
Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)  
Bold values indicate exceedance of residential RSL  
Red values indicate 3x background values (or above background RDL if background is non-detect)  
Unshaded columns are grab surface soil samples  
Gray shaded columns are composite surface soil samples  
Orange shaded columns are shallow subsurface soil samples  
Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower  
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit

µg/kg = micrograms per kilogram  
µg/kg = micrograms per kilogram  
CLP = Contract Laboratory Program  
HQ = Hazard Quotient  
NL = No listed value  
PAH = polycyclic aromatic hydrocarbon  
Q = Qualifier  
SIM = selective ion monitoring  
SVOC = semivolatile organic compound  
TR = Target Risk  
VOC = volatile organic compound

**Notes:**

Composite samples were not analyzed for VOCs.  
 Samples CS-116, CS-140, and CS-169 were not analyzed for PAHs by SIM due to elevated PAHs detected during routine SVOC analysis  
 Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ.0.1 (EPA, 2020)  
 Bold values indicate exceedance of residential RSL  
 Red values indicate 3x background values (or above background RDL if background is non-detect)  
 Unshaded columns are grab surface soil samples  
 Gray shaded columns are composite surface soil samples  
 Orange shaded columns are shallow subsurface soil samples  
 Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower  
 U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit

µg/kg = micrograms per kilogram  
 µg/kg = micrograms per kilogram  
 CLP = Contract Laboratory Program  
 HQ = Hazard Quotient  
 NL = No listed value  
 PAH = polycyclic aromatic hydrocarbon  
 Q = Qualifier  
 SIM = selective ion monitoring  
 SVOC = semivolatile organic compound  
 TR = Target Risk  
 VOC = volatile organic compound

Notes:  
Composite samples were not analyzed for VOCs.  
Samples CS-116, CS-140, and CS-169 were not analyzed for PAHs by SIM due to elevated PAHs detected during routine SVOC analysis  
Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)  
Bold values indicate exceedance of residential RSL  
Red values indicate 3x background values (or above background RDL if background is non-detect)  
Unshaded columns are grab surface soil samples  
Gray shaded columns are composite surface soil samples  
Orange shaded columns are shallow subsurface soil samples  
Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower  
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit

µg/kg = micrograms per kilogram  
µg/kg = micrograms per kilogram  
CLP = Contract Laboratory Program  
HQ = Hazard Quotient  
NL = No listed value  
PAH = polycyclic aromatic hydrocarbon  
Q = Qualifier  
SIM = selective ion monitoring  
SVOC = semivolatle organic compound  
TR = Target Risk  
VOC = volatile organic compound

Notes:

- Composite samples were not analyzed for VOCs.
- Samples CS-116, CS-140, and CS-169 were not analyzed for PAHs by SIM due to elevated PAHs detected during routine SVOC
- Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)
- Bold values indicate exceedance of residential RSL
- Red values indicate 3x background values (or above background RDL if background is non-detect)
- Unshaded columns are grab surface soil samples
- Gray shaded columns are composite surface soil samples
- Orange shaded columns are shallow subsurface soil samples
- Green shaded columns are deep subsurface soil samples

µg/kg = micrograms per kilogram  
 J = Reported value is estimated; actual value may be higher or lower  
 NL = No listed value  
 Q = Qualifier  
 U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit  
 VOC = volatile organic compound  
 PAH = polycyclic aromatic hydrocarbon  
 SVOC = semivolatile organic compound

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

| Methoxychlor                 | 32000                             | 23 UJ      | 21 U       | 21 U       | 24 U       | 21 U       | 21 U       | 23 U       | 19 U       | 20 U       | 24 U       | 21 U          |            |   |
| trans-Chlordane <sup>1</sup> | 1700                              | 2.4 R      | 2.1 U      | 2.1 U      | 5.4 R      | 2300 J     | 2300       | 2.3 U      | 1.9 U      | 2 U        | 2.4 U      | 2.1 U         |            |   |

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup>The RSL values in table are for Chlordane

<sup>2</sup>The RSL value in table is for Endosulfan

<sup>3</sup>The RSL value in table is for Endrin

Data compared to EPA Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PCB = polychlorinated biphenyl

Q = Qualifier

QC = Quality control

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III  
Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

Notes:

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

Notes:

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

Notes:

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

Notes:

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III  
Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

Notes:

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

Notes:

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III  
Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSL) for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020).

Bold values indicate exceedance of residential RSL.

Red values indicate three times background values (or above background RDL if background is non-detect).

Unshaded columns are grab surface soil samples

Gray shaded columns are composite surface soil samples

Orange shaded columns are shallow subsurface soil samples

Green shaded columns are deep subsurface soil samples

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

TR = Target Risk

Notes:

Data compared to EPA Regional Screening Level (RSL) for Tapwater TR= 1E-06 HQ 0.1 (EPA, 2020)

Data compared to EPA Vapor Intrusion Screening Level (VISL) for Target Groundwater Concentration TR= 1E-06 HQ 0.1 (EPA, 2020)

Bold values indicate exceedance of RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit

J = Reported value is estimated; actual value may be higher or lower

µg/L = micrograms per liter

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PAH = polycyclic aromatic hydrocarbon

Q = Qualifier

SIM = selective ion monitoring

SVOC = semivolatile organic compound

TR = Target Risk

VOC = volatile organic compound

**Notes:**

Data compared to 10X the EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020) and EPA BTAG freshwater sediment screening criteria (EPA, 1997)  
Yellow highlight indicates exceedance of BTAG value  
Bold values indicate exceedance of residential RSL  
Red values indicate 3x background values (or above background RDL if background is non-detect)

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the san

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

BTAG = Biological Technical Assiatnce Group

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PAH = polycyclic aromatic hydrocarbon

Q = Qualifier

RSL = Regional Screening Level

SIM = selective ion monitoirng

SVOC = semivolatile organic compound

TR = Target Risk

VOC = volatile organic compound

Notes:

Data compared to 10X the EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020) and EPA BTAG freshwater sediment screening criteria (EPA, 1997)

Yellow highlight indicates exceedance of BTAG value

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

BTAG = Biological Technical Assistance Group

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PAH = polycyclic aromatic hydrocarbon

Q = Qualifier

RSL = Regional Screening Level

SIM = selective ion monitoring

SVOC = semivolatile organic compound

TR = Target Risk

VOC = volatile organic compound

**Notes:**

Data compared to 10X the EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020) and EPA BTAG freshwater sediment screening criteria (EPA, 1997)

Yellow highlight indicates exceedance of BTAG value

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

J = Reported value is estimated; actual value may be higher or lower.

R = The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

µg/kg = micrograms per kilogram

BTAG = Biological Technical Assiatnce Group

CLP = Contract Laboratory Program

HQ = Hazard Quotient

NL = No listed value

PAH = polycyclic aromatic hydrocarbon

Q = Qualifier

RSL = Regional Screening Level

SIM = selective ion monitoring

SVOC = semivolatile organic compound

TR = Target Risk

VOC = volatile organic compound

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to 10X the EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020) and EPA BTAG freshwater sediment screening criteria (EPA, 1997)

Yellow highlight indicates exceedance of BTAG value

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

BTAG = Biological Technical Assiatnce Group

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

RSL = Regional Screening Level

TR = Target Risk

**Notes:**

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

Data compared to 10X the EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (EPA, 2020) and EPA BTAG freshwater sediment screening criteria (EPA, 1997)

Yellow highlight indicates exceedance of BTAG value

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

J = Reported value is estimated; actual value may be higher or lower.

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

mg/kg = milligrams per kilogram

CLP = Contract Laboratory Program

BTAG = Biological Technical Assiatnce Group

HQ = Hazard Quotient

NL = No listed value

Q = Qualifier

RSL = Regional Screening Level

TR = Target Risk

SINCE 1916

*Defying Mother Nature*

All components of  
this product are recyclable.

*Write in the Rain*

A patented, environmentally  
responsible, all-weather writing paper  
that sheds water and enables you to  
write anywhere, in any weather.

Using a pencil or all-weather sharpener,  
draw a fine line across the top of the field  
regardless of the conditions.

# Rite in the Rain

SAVING MOTHER NATURE

**Yes, Rite in the Rain** is a wood-based & recyclable paper, but unlike plain paper... **it won't turn to mush when exposed to:**

rain storms heavy sweat oil & grease mud & grime laundry mishap

**ALL-WEATHER TOUGH!**

**BRAND HISTORY**  
The Rite in the Rain story began a century ago in the forests of the Great Pacific Northwest. Entrepreneur Jerry Darling recognized the logging industry's need for a durable material that could be written on and survive in poor weather conditions. Jerry developed a special coating that created a unique moisture shield on the hand-dipped sheets of paper that he and his wife, Mary, processed at their home. In these humble beginnings our first all-weather paper was born. Over the many years we've perfected and patented our environmentally responsible coating process. Still located in Tacoma, our continued mission is to provide innovative products professionals and enthusiasts who brave the outdoors.

SOIL SAMPLE LOG SHEET

PAGE 1 OF 1

Project Site Name: Norwood Landfill
Project Number: 103X903403004

Sample ID No: NL-2020-55-21
Sample Location: 55-21 58-21
Sampled By: J. Ryan
C.O.C. No:

SAMPLING DATA

Table with columns: DATE, Time, Depth, Method, Color, pH, S.C., Temp., Turbidity, DO, Salinity, ORP. Includes handwritten values like 9/28/2020, 0845, 0-1, 6.46, and NA.

SAMPLE COLLECTION INFORMATION

Table with columns: Analysis, Preservative, Container Requirements, Collected. Lists various analyses like Low/Medium VOCs, TAL SVOCs, Pesticides, etc.

OBSERVATION / NOTES:

39.88701073°N
75.2976985°W

MAP:

Circle if Applicable

Signature(s):

MS/MSD

NA

Duplicate ID No:

SOIL SAMPLE LOG SHEET

PAGE 1 OF 1

Project Site Name: Norwood Landfill
Project Number: 103X903403004

Sample ID No: NL-2020-SS-38
Sample Location: SS-36
Sampled By: (b) (4)
C.O.C. No:

SAMPLING DATA

Table with columns: DATE, Time, Depth, Method, Color, pH, S.C., Temp., Turbidity, DO, Salinity, ORP. Includes handwritten entries like 9/29/20, 1400, 0-1, G, and NA.

SAMPLE COLLECTION INFORMATION

Table with columns: Analysis, Preservative, Container Requirements, Collected. Lists various analyses like Low/Medium VOCs, TAL SVOCs, Pesticides, etc.

#### PURGE VOLUME CALCULATION

Casing Volume: \_\_\_\_\_ Ft. of water  
 x \_\_\_\_\_ Gallons/Foot  
 = \_\_\_\_\_ Gallons per Single Casing Volume  
 Sand Pack Volume: \_\_\_\_\_ Ft. of Saturated Sand Pack  
 x \_\_\_\_\_ Gallons/Foot (borehole diameter)  
 = \_\_\_\_\_ Gallons (in borehole)  
 = \_\_\_\_\_ Gallons of Casing Volume  
 = \_\_\_\_\_ x 0.3 (Assuming porosity = 30%)  
 = \_\_\_\_\_ Gallons Within Sand Pack  
 Single Purge Volume: \_\_\_\_\_ Gallons (Casing Vol. + Sand Pack Vol. + Fluids Added)  
 Minimum Purge Volume: \_\_\_\_\_ Gallons  
 Actual Purge Volume: \_\_\_\_\_ Gallons  
 Volume Measured by: \_\_\_\_\_  
 Rate of Development \_\_\_\_\_ Gallons/Minute (Hour, Day)  
 Pumping Rate/Depth \_\_\_\_\_ @ \_\_\_\_\_ Ft. (Below Grd.)  
 Immiscible Phases Present: Y N Thickness \_\_\_\_\_

#### FLUIDS ADDED

Lost Drilling Fluid: \_\_\_\_\_ Gallons  
 Lost Purge Water: \_\_\_\_\_ Gallons  
 Water During Installation: \_\_\_\_\_ Gallons  
 Total Fluids Added: \_\_\_\_\_ Gallons  
 Source of Added Water: \_\_\_\_\_  
 Ground Water Quality Parameters of Added Water Measured: Y N  
 Sample Collected of Added Water: Y N  
 Sample Designation of Added Water: \_\_\_\_\_

#### INSTRUMENT CALIBRATION

pH Meter: \_\_\_\_\_ Spec. Conductance Meter: \_\_\_\_\_  
 pH 4.0 = \_\_\_\_\_ @ \_\_\_\_\_ °C Standard \_\_\_\_\_ μmhos/cm @ 25°C  
 pH 7.0 = \_\_\_\_\_ @ \_\_\_\_\_ °C Reading \_\_\_\_\_ μmhos/cm @ \_\_\_\_\_ °C  
 pH 10.0 = \_\_\_\_\_ @ \_\_\_\_\_ °C Turbidity Meter: \_\_\_\_\_  
 Dissolved Oxygen Meter: \_\_\_\_\_ Other: \_\_\_\_\_

| Total Volume Discharged | Rate of Discharge | Time  | Temp | pH    | Specific Conductance | Turbidity or D.O.   | Clarity, Odor, PID Readings, Other: |

SAMPLING DATA

Table with 10 columns: DATE, Color, pH, S.C., Temp., Turbidity, DO, Salinity, ORP. Includes handwritten values: 10/05/2020, 1155, grab, clear, 4.01, 0.670, 17.70, 38.4, 0.19, 63.

See sample data sheet

SAMPLE COLLECTION INFORMATION

Table with 4 columns: Analysis, Preservative, Container Requirements, Collected. Lists various analyses like Trace VOCs, TAL SVOCs, PAHs, PCBs, Pesticides, and TAL Metals and HG.

Notes:

<sup>1</sup> The RSL values in table are for Chlordane

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL; highlighted values indicate exceedance of industrial RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

µg/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

<sup>1</sup> The RSL values in table are for Chlordane

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL; highlighted values indicate exceedance of industrial RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

µg/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

<sup>1</sup> The RSL values in table are for Chlordane

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL; highlighted values indicate exceedance of industrial RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

µg/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL; highlighted values indicate exceedance of industrial RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

<sup>2</sup> There is no RSL for lead in soil; however, EPA recommends soil with lead concentrations less than 400 mg/kg is safe for residential use

mg/kg = milligrams per kilogram

J = Reported value is estimated; actual value may be higher or lower

J- = Reported value is estimated, actual value is expected to be lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL; highlighted values indicate exceedance of industrial RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

<sup>2</sup> There is no RSL for lead in soil; however, EPA recommends soil with lead concentrations less than 400 mg/kg is safe for residential use

mg/kg = milligrams per kilogram

J = Reported value is estimated; actual value may be higher or lower

J- = Reported value is estimated, actual value is expected to be lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is

approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL; highlighted values indicate exceedance of industrial RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

<sup>2</sup> There is no RSL for lead in soil; however, EPA recommends soil with lead concentrations less than 400 mg/kg is safe for residential use

mg/kg = milligrams per kilogram

J = Reported value is estimated; actual value may be higher or lower

J- = Reported value is estimated, actual value is expected to be lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is

approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:  
 Data compared to EPA BTAG freshwater screening criteria (1997)  
 Bold values indicate exceedance of BTAG criteria  
 Red values indicate 3x background values (or above background RDL if background is non-detect)  
 µg/L = micrograms per liter  
 Q = Data qualifier  
 U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit  
 J = Reported value is estimated; actual value may be higher or lower

Notes:  
 Data compared to EPA BTAG freshwater sediment screening criteria (1997)  
 Bold values indicate exceedance of BTAG criteria  
 Red values indicate 3x background values (or above background RDL if background is non-detect)  
 J = Reported value is estimated; actual value may be higher or lower  
 J- = Reported value is estimated, actual value is expected to be lower  
 mg/kg = milligrams per kilogram  
 NL = No listed value  
 Q = Qualifier  
 U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit  
 UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:

Data compared to EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

µg/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

J+ = Reported value is estimated; actual value is expected to be higher

J- = Reported value is estimated, actual value is expected to be lower

NL = No listed value

Q = Qualifier

R = Data were rejected. The sample jar for this specific sample was broken in transit. Soil remaining in sealed baggie was analyzed.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

Notes:

Data compared to EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

µg/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

J+ = Reported value is estimated; actual value is expected to be higher

J- = Reported value is estimated, actual value is expected to be lower

NL = No listed value

Q = Qualifier

R = Data were rejected. The sample jar for this specific sample was broken in transit. Soil remaining in sealed baggie was analyzed.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

Notes:

Data compared to EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

µg/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

J+ = Reported value is estimated; actual value is expected to be higher

J- = Reported value is estimated, actual value is expected to be lower

NL = No listed value

Q = Qualifier

R = Data were rejected. The sample jar for this specific sample was broken in transit. Soil remaining in sealed baggie was analyzed.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise

Notes:

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

(\*) = Endrin and Chlordane values, respectively.

(E) = Endosulfan value

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

ug/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential and industrial soil TR= 1E-06 HQ 0.1 (Ref. 10)

(\*) = Endrin and Chlordane values, respectively.

(E) = Endosulfan value

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

ug/kg = micrograms per kilogram

J = Reported value is estimated; actual value may be higher or lower

approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

<sup>2</sup> There is no RSL for lead in soil; however, EPA recommends soil with lead concentrations less than 400 mg/kg is safe for residential use

mg/kg = milligrams per kilogram

J = Reported value is estimated; actual value may be higher or lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

<sup>2</sup> There is no RSL for lead in soil; however, EPA recommends soil with lead concentrations less than 400 mg/kg is safe for residential use

mg/kg = milligrams per kilogram

J = Reported value is estimated; actual value may be higher or lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

<sup>2</sup> There is no RSL for lead in soil; however, EPA recommends soil with lead concentrations less than 400 mg/kg is safe for residential use

mg/kg = milligrams per kilogram

J = Reported value is estimated; actual value may be higher or lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

Notes:

Data compared to EPA RSLs for residential soil TR= 1E-06 HQ 0.1 (Ref. 10)

Bold values indicate exceedance of residential RSL

Red values indicate 3x background values (or above background RDL if background is non-detect)

<sup>1</sup> There is no RSL for total chromium; values shown are for chromium III

<sup>2</sup> There is no RSL for lead in soil; however, EPA recommends soil with lead concentrations less than 400 mg/kg is safe for residential use

mg/kg = milligrams per kilogram

J = Reported value is estimated; actual value may be higher or lower

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

NL = No listed value

Q = Qualifier

**EPA RESIDENTIAL SOIL EVALUATION**

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
REGION III  
1650 Arch Street  
Philadelphia, Pennsylvania 19103**

**SUBJECT:** Norwood Expanded Site Inspection  
Residential Soil Evaluation  
Surface Soil (0-0.5 ft), (2-4 ft) and (8-10ft)

**FROM:** Linda Watson, Toxicologist  
Technical Support Branch (3HS41)

**TO:** Joe Vitello, SAM  
Site Assessment Manager

**DATE:** August 12, 2021

Per the attached risk calculation memos that were sent to you on June 24, 2021 and July 13, 2021, individual risk assessments were performed for the following medium and depths:

- Surface soil (0-0.5 ft) at 64 Residential properties, including 5 duplicate samples.
- Subsurface soil (2 -4 ft) at 32 Residential properties, including 3 duplicate samples.
- Subsurface soil (8-10 ft) at 12 Residential properties, including 1 duplicate sample.

**Surface Soil (0-0.5 feet)**

- Sixty-four (64) Residential properties were below or within EPA's acceptable non-cancer and cancer risk criteria when assuming chromium is present in its trivalent form.
- Thirty-six (36) Residential properties were below or within EPA's acceptable non-cancer and cancer criteria when assuming 100% of chromium is present in the hexavalent form.
- Twenty-eight Residential properties *exceed* EPA's acceptable criteria when assuming 100% of chromium is present in the hexavalent form.
- Residential surface soil (0-0.5 ft) data set range is 7.2 – 366 mg/kg.  
When removing the highest detection the range is 7.2 mg/kg – 56.4 mg/kg.
- Background soil (0-0.5 ft) ranges from 4.8 mg/kg – 37.2 mg/kg.
- Background analysis using ProUCL indicates all residential properties are within background for chromium with the exception of the following Residential properties:
  - Resident 121 – chromium (SS-52.2 mg/kg)
  - **Resident 131 – chromium (CS-178 mg/kg, SS-366mg/kg)**
  - Resident 135 – chromium (CS-41.2 mg/kg, SS-46.5 mg/kg)
  - Resident 146 – chromium (CS-46.1 mg/kg)
  - Resident 154 – chromium (CS-56.4 mg/kg)

**Conclusion**

For all samples with total risk at or above the lifetime Cancer Risk (CR) level of concern, the CR was almost entirely due to chromium. Since chromium speciation has not been performed it is uncertain if chromium is present in trivalent or hexavalent form (or combination). If the chromium is not completely hexavalent, then the risk would be considerably lower (See 1<sup>st</sup> bullet). Moreover, even if the chromium present is entirely hexavalent, it appears these levels of chromium are consistent with background, with the exception of the above 5 listed residential properties. Ultimately, we conclude that the

chromium is unlikely to be a site-related chemical of concern in these yards. However, speciation analysis is recommended at the above residential locations, in particular at Residential 131, to determine whether the chromium is substantially hexavalent.

### **Sub-Surface Soil (2-4 feet)**

- Thirty-two (32) Residential properties were below or within EPA's acceptable non-cancer and cancer risk criteria when assuming chromium is present in its trivalent form.
- Eighteen (18) Residential properties were below or within EPA's acceptable non-cancer and cancer criteria when assuming 100% of chromium is present in the hexavalent form.
- Fourteen (14) Residential properties *exceed* EPA's acceptable criteria when assuming 100% of chromium is present in the hexavalent form.
- Residential site data set range is 7.2 – 366 mg/kg. When this highest detection is removed, data range is 7.2 mg/kg – 56.4 mg/kg.
- Background soil (0-0.5 ft) ranges from 4.8 mg/kg – 37.2 mg/kg.
- Background analysis using ProUCL indicates all residential properties are within background for chromium.
- Residential subsurface soil (2-4 ft) data set is 9.9 to 27.4 mg/kg.
- Background subsurface soil (2-4 ft) data set is 10.1 to 50.2 mg/kg.
- Residential sample location SB-147, exceeds EPA's non-cancer threshold (HI=3.4) due to manganese. **Manganese in this sample (2060 mg/kg)** also was much higher than manganese in background soil samples obtained at the 2-4-foot depth (37.9 to 495 mg/kg), and thus could not be attributed to background.

### **Conclusion**

For all samples with total risk at or above the lifetime Cancer Risk (CR) level of concern, the CR was almost entirely due to chromium. Since chromium speciation has not been performed it is uncertain if chromium is present in trivalent or hexavalent form (or combination). If the chromium is not completely hexavalent, then the risk would be considerably lower (See 1<sup>st</sup> bullet). Moreover, even if the chromium present is entirely hexavalent, it appears these levels of chromium are consistent with background.

For non-cancer manganese exceeds EPA's non-cancer threshold at Residential location SB-147.

### **Sub-Surface Soil (8-10 feet)**

- Twelve (12) Residential properties were below or within EPA's acceptable non-cancer and cancer risk criteria when assuming chromium is present in its trivalent form.
- Six (6) Residential properties were below or within EPA's acceptable non-cancer and cancer criteria when assuming 100% of chromium is present in the hexavalent form.
- Six (6) Residential properties *exceed* EPA's acceptable criteria when assuming 100% of chromium is present in the hexavalent form.
- Residential subsurface soil (8-10ft) data set range is 8.5 – 67.3 mg/kg.
- Background soil (8-10ft) ranges from 16.2 mg/kg – 17 mg/kg.
- Background analysis using ProUCL indicates all residential properties are within background for chromium with the exception of the following Residential properties:
  - DB-115 chromium – 42 mg/kg
  - DB-119 chromium – 67.3 mg/kg

## **Recommendation**

Comfort letters should be sent to all Residents sampled indicating risk were determined to be below or within EPA's acceptable criteria and/or background levels with the exception of the following locations:

- Resident 121 – chromium (SS-52.2 mg/kg)
- *Resident 131 – chromium (CS-178 mg/kg, SS-366mg/kg)*
- Resident 135 – chromium (CS-41.2 mg/kg, SS-46.5 mg/kg)
- Resident 146 – chromium (CS-46.1 mg/kg)
- Resident 154 – chromium (CS-56.4 mg/kg)
- *Resident 147 – manganese – 2060 mg/kg*
- DB-115 chromium – 42 mg/kg
- DB-119 chromium – 67.3 mg/kg

Risk management decisions should be made in respect to how these locations will be addressed to completely rule out chromium and manganese. Additional sampling at these locations and speciation analysis should be considered. Please note, DB-115 and DB-119 are at depth and thus creates an incomplete exposure pathway to current Residents.

If you need assistance with composing comfort letters to Residents, please contact me at X3116.

**Subject:** Organic Data Validation (S4VEM)  
Norwood Landfill  
49088 COAJ6

### **Overview**

This data package consisted of two (2) sediment samples and eighteen (18) soil samples including a field duplicate pair analyzed for volatile, semivolatile, semivolatile PAH by SIM, pesticide and Aroclor analytes

Analyses were performed by Chemtech Consulting Group (CHM) according to Contract Laboratory Program (CLP) Statement of Work (SOW) SOM02.4.

Data were validated according to the National Functional Guidelines for Organic Superfund Methods Data Review and applicable USEPA Region 3 modifications. Electronic validation was performed by the Electronic Data eXchange & Evaluation System (EXES). The validation report has been assigned the Superfund Data Validation Label S4VEM (Stage\_4\_Validation\_Electronic\_Manual).

The following validation narrative is an evaluation of laboratory reported data based on the electronic data package available through the EXES Data Manager dated October 20, 2020.

### **Summary**

Significant data quality outliers regarding Deuterated Monitoring Compounds (DMC) in semivolatile fraction, surrogate in pesticide fraction and dual column precision in pesticide and Aroclor fractions were identified that resulted in rejection of results. Less significant data quality outliers were identified that resulted in estimation of sample results, including but not limited to, surrogates in pesticide and Aroclor fractions and matrix spike in pesticide fraction as detailed below.

### **Major Problems**

Recovery of surrogate Tetrachloro-m-xylene (TCX) was <10% on one column and less than the lower control limit on the other column in pesticide sample COAS2. Positive results in this sample have been qualified "J". Quantitation limits have been rejected and qualified "R".

Recoveries for the following DMCs were <10% in semivolatiles listed. No positive results were reported for analytes associated with these DMCs. Quantitation limits for analytes associated with these DMCs have been rejected and qualified "R".

| Fraction      | DMC                                       | Affected Sample (s) |
|---------------|---|---------------------|
| Semivolatiles | 4,6-Dinitro-2-methylphenol-d <sub>2</sub> | COAK6, COAS2        |
|               | 4-Nitrophenol-d <sub>4</sub>              | COAL2               |

The following analytes reported percent difference (%D) >200% in pesticide or Aroclor dual column analyses for samples listed. The significant %D between the two results may indicate interferences impacting the analyte. Reported results for these analytes in samples listed have been rejected and qualified "R".

| Fraction  | Affected Analyte (s)      | Affected Samples    |
|-----------|---------------------------|---------------------|
| Pesticide | Dieldrin, trans-Chlordane | COAK6, COAQ1        |
|           | trans-Chlordane           | COAL5, COAL7, COAS2 |
|           | 4,4'-DDT                  | COAL6, COAP1        |
|           | Endrin                    | COAP2               |
| Aroclor   | Aroclor 1260              | COAP1               |

### Minor Problems

Recoveries for surrogate Decachlorobiphenyl (DCB) were outside the upper control limit on one analytical column in pesticide sample COAP2 and Aroclor sample COAP1. Positive results in these samples have been qualified "J".

The recovery for 4,4'-DDT was outside the upper control limit on one analytical column in pesticide matrix spike duplicate analysis of sample COAP4. The positive result for this analyte in this sample has been qualified "J".

The following analytes exceeded the calibration range in the diluted analysis of samples listed. Positive results for these analytes in the affected samples have been qualified "J".

| Fraction | Affected Analytes  | Affected Sample |
|----------|--|-----------------|
| PAH SIM  | Fluoranthene, Benzo(b)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene       | COAL6           |
|          | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene | COAP1           |

### Notes

Detected concentrations for target analytes less than Contract Required Quantitation Limit (CRQL) are estimated and have been qualified "J".

Pesticide and Aroclor results with %D >25% but <200% between the two analytical columns have been qualified "J".

Laboratory blanks were free of contamination in all fractions with the exception of acetone and methylene chloride <CRQL in volatile blanks VBLK23, VBLK24 and VBLK26 and methylene chloride in volatile blanks VBLK22 and VHBLK01. Positive results for these analytes <CRQL in samples associated with these blanks have been raised to the CRQL and qualified "U".

Laboratory Control Samples (LCS) analyzed in pesticide and Aroclor fractions reported acceptable results.

Trip blanks COAS0 and COAS6 collected 9/28/20 and 9/29/20, respectively, are associated with samples in this SDG. The two trip blanks were analyzed in SDG COAR2. No positive results were reported in sample COAS0. Chloromethane, acetone and toluene were detected in sample COAS6. These analytes were not detected in samples associated with this trip blank. No data were qualified based on trip blanks.

Concentrations for the following target analytes exceeded the calibration range in the initial analysis for samples listed below. The samples were reanalyzed at dilution listed in order to quantitate these analytes within the calibration range and the analytes were reported from the dilutions. There is no indication that these exceedance issues impacted subsequent sample analyses.

| Fraction     | Sample | DF  | Affected Analytes  |
|--------------|--------|-----|--|
| Semivolatile | COAK6  | 2X  | Phenanthrene, Pyrene   |
|              | COAP2  | 10X | Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene           |
|              | COAS2  | 10X | Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene |
| PAH          | COAL5  | 2X  | Fluoranthene   |
|              | COAL6  | 5X  | Phenanthrene, Anthracene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene                 |
|              | COAL7  | 2X  | Fluoranthene   |
|              | COAP1  | 5X  | Anthracene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)Pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene                       |
|              | COAP4  | 5X  | Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene                       |
|              | COAQ1  | 5X  | Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene   |
| Pesticide    | COAL6  | 2X  | cis-Chlordane, trans-Chlordane   |
|              | COAP1  | 5X  | 4,4'-DDD   |

Samples COAK6, COAP2 and COAS2 were not analyzed for PAH SIM fraction due the high concentration of analytes in semivolatile fraction for these samples. No data were qualified based on this finding.

Matrix Spike/Matrix Spike Duplicate (MS/MSD) analyses of pesticide sample COAP4 reported acceptable results with the exception of recovery outside the upper control limit for 4,4'-DDT in MSD analysis on one column. The positive result for 4,4'-DDT in the parent sample has been qualified "J" as reported under "Minor Problems".

MS/MSD analyses of Aroclor sample C0AP4 reported recoveries outside the upper control limit on both columns for Aroclor 1016 and 1260. No positive results were reported for these analytes in the parent sample. No data were qualified based on these outliers.

Recoveries for two DMCs were outside the upper control limits in semivolatile sample C0AK0. No positive results were reported for analytes associated with these DMCs in this sample. No data were qualified based on these outliers.

Recoveries of surrogates TCX or DCB were outside the upper control limits in several Aroclor samples. No positive results were reported for Aroclors in the affected samples. No data were qualified based on these outliers.

Results for the field duplicate pair, samples C0AP2/C0AS2 were within control limits of 25% Relative Percent Difference (RPD) or + CRQL for all analytes except as noted below. Data are not qualified based on field duplicate precision.

| Fraction     | Analyte not comparable in field duplicate   |
|--------------|---|
| Semivolatile | 2-Methylnaphthalene, Acenaphthene, Dibenzofuran, Fluorene, Carbazole              |
| Pesticide    | gamma-BHC, Dieldrin, 4,4'-DDE, 4,4'-DDD, 4,4'-DDT, cis-Chlordane, trans-Chlordane |

Tentatively Identified Compounds (TICs) are not reviewed by the data validators. The validation qualifiers are applied by EXES electronic validation based on laboratory qualifiers. By definition, all compounds identified as TICs should be treated as tentative identifications and all reported results should be considered estimated.

Sample calculation checks were performed. All calculated results had RPDs less than 5% of the reported results. No sample data were qualified.

Manual integrations were performed and identified by the laboratory. A subset of these was evaluated and were found to be accurate and consistent. No action was taken based on manual integrations.

Validation qualifiers are only applied by the validator to field samples. Qualifiers may be applied by EXES electronic validation to laboratory quality control samples.

### **Glossary of Organic Data Qualifier Codes**

|                       |   |
|-----------------------|---|
| Validation Qualifiers | In order of descending precedence. Only one of these qualifiers may apply to any result.  |
| R                     | The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.             |
| UJ                    | The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.                                      |
| U                     | The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit  |
| J                     | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.  |
| J+                    | The result is an estimated quantity, but the result may be biased high.   |
| J-                    | The result is an estimated quantity, but the result may be biased low.  |
| Additional Qualifiers | Additional qualifiers may be combined with other qualifiers.  |
| N                     | The analyte has been “tentatively identified” or “presumptively” as present.  |
| B                     | The result is presumed a blank contaminant. This qualifier is used for drinking water samples only.   |
| C                     | The target Pesticide or Aroclor analyte identification has been confirmed by Gas Chromatography/Mass Spectrometry (GC/MS). This qualifier may be added to other qualifiers. |
| X                     | The target Pesticide or Aroclor analyte identification was not confirmed when GC/MS analysis was performed. This qualifier may be added to other qualifiers.                |

| 2,2-oxybis(1-Chloropropane) | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Acetophenone                | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 320               |                 | ug/kg | 320        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Bromophenyl-phenylether   | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobenzene           | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Atrazine                    | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Pentachlorophenol           | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Phenanthrene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Anthracene                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

| Analyte Name               | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|----------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| Carbazole                  | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Di-n-butylphthalate        | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Fluoranthene               | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Pyrene                     | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Butylbenzylphthalate       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 3,3-Dichlorobenzidine      | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Benzo(a)anthracene         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Chrysene                   | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-ethylhexyl)phthalate | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Di-n-octyl phthalate       | Target       | 360               | U               | ug/kg | 360        | U        | 1.0             | YES        | S4VEM            |
| Benzo(b)fluoranthene       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Benzo(k)fluoranthene       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Benzo(a)pyrene             | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Indeno(1,2,3-cd)pyrene     | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Dibenzo(a,h)anthracene     | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Benzo(g,h,i)perylene       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,3,4,6-Tetrachlorophenol  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |

|--------------------------------|-----------------------|-------------------------|-----------------------|
| Sample Number: C0AK0           | Method: Semivolatiles | Matrix: Soil            | MA Number:            |
| Sample Location: NL-2020-SS-25 | pH:                   | Sample Date: 09/28/2020 | Sample Time: 09:55:00 |
| % Moisture:                    |                       | % Solids: 84.7          |                       |

| Analyte Name                | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|-----------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| 1,4-Dioxane                 | Target       | 79                | U               | ug/kg | 79         | U        | 1.0             | YES        | S4VEM            |
| Benzaldehyde                | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Phenol                      | Target       | 67                | J               | ug/kg | 67         | J        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethyl)ether     | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 2-Chlorophenol              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylphenol              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 2,2-oxybis(1-Chloropropane) | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Acetophenone                | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 870               |                 | ug/kg | 870        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Bromophenyl-phenylether   | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobenzene           | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Atrazine                    | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Pentachlorophenol           | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Phenanthrene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Anthracene                  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Carbazole                   | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Di-n-butylphthalate         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

| Analyte Name                       | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|------------------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| Fluoranthene                       | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Pyrene                             | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Butylbenzylphthalate               | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 3,3-Dichlorobenzidine              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

|                                |                       |                         |                       |
|--------------------------------|-----------------------|-------------------------|-----------------------|
| Sample Number: C0AK6           | Method: Semivolatiles | Matrix: Soil            | MA Number:            |
| Sample Location: NL-2020-SS-31 | pH:                   | Sample Date: 09/28/2020 | Sample Time: 12:30:00 |
| % Moisture:                    |                       | % Solids: 82.7          |                       |

| Analyte Name                | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|-----------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| 1,4-Dioxane                 | Target       | 81                | U               | ug/kg | 81         | U        | 1.0             | YES        | S4VEM            |
| Benzaldehyde                | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Phenol                      | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethyl)ether     | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 2-Chlorophenol              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylphenol              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 2,2-oxybis(1-Chloropropane) | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Acetophenone                | Target       | 53                | J               | ug/kg | 53         | J        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 240               |                 | ug/kg | 240        |          | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 230               |                 | ug/kg | 230        |          | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 51                | J               | ug/kg | 51         | J        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 210               |                 | ug/kg | 210        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 54                | J               | ug/kg | 54         | J        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 390               |                 | ug/kg | 390        |          | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 440               |                 | ug/kg | 440        |          | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 650               |                 | ug/kg | 650        |          | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 400               | R               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

Sample Number: C0AL2

Method: Aroclors

Matrix: Soil

MA Number:

Sample Location: NL-2020-SS-37

pH:

Sample Date: 09/28/2020

Sample Time: 15:20:00

% Moisture:

% Solids: 81.2

| Acetophenone                | Target       | 84                | J               | ug/kg | 84         | J        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 250               |                 | ug/kg | 250        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 4-Bromophenyl-phenylether   | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobenzene           | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| Atrazine                    | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Pentachlorophenol           | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Phenanthrene                | Target       | 170               | J               | ug/kg | 170        | J        | 1.0             | YES        | S4VEM            |
| Anthracene                  | Target       | 54                | J               | ug/kg | 54         | J        | 1.0             | YES        | S4VEM            |
| Carbazole                   | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Di-n-butylphthalate         | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

| Analyte Name                       | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|------------------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| Fluoranthene                       | Target       | 320               | J               | ug/kg | 320        | J        | 1.0             | YES        | S4VEM            |
| Pyrene                             | Target       | 280               |                 | ug/kg | 280        |          | 1.0             | YES        | S4VEM            |
| Butylbenzylphthalate               | Target       | 220               | U               | ug/kg | 220        | U        | 1.0             | YES        | S4VEM            |
| 3,3-Dichlorobenzidine              | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Benzo(a)anthracene                 | Target       | 190               | J               | ug/kg | 190        | J        | 1.0             | YES        | S4VEM            |
| Chrysene                           | Target       | 190               | J               | ug/kg | 190        | J        | 1.0             | YES        | S4VEM            |
| Bis(2-ethylhexyl)phthalate         | Target       | 220               |                 | ug/kg | 220        |          | 1.0             | YES        | S4VEM            |
| Di-n-octyl phthalate               | Target       | 430               | U               | ug/kg | 430        | U        | 1.0             | YES        | S4VEM            |
| Benzo(b)fluoranthene               | Target       | 480               |                 | ug/kg | 480        |          | 1.0             | YES        | S4VEM            |
| Benzo(k)fluoranthene               | Target       | 100               | J               | ug/kg | 100        | J        | 1.0             | YES        | S4VEM            |
| Benzo(a)pyrene                     | Target       | 280               |                 | ug/kg | 280        |          | 1.0             | YES        | S4VEM            |
| Indeno(1,2,3-cd)pyrene             | Target       | 390               |                 | ug/kg | 390        |          | 1.0             | YES        | S4VEM            |
| Dibenzo(a,h)anthracene             | Target       | 97                | J               | ug/kg | 97         | J        | 1.0             | YES        | S4VEM            |

| Endosulfan Sulfate  | Target       | 4.0               | U               | ug/kg | 4.0        | U        | 1.0             | YES        | S4VEM            |
| 4,4-DDT             | Target       | 12                |                 | ug/kg | 12         |          | 1.0             | YES        | S4VEM            |
| Methoxychlor        | Target       | 21                | U               | ug/kg | 21         | U        | 1.0             | YES        | S4VEM            |
| Endrin ketone       | Target       | 4.0               | U               | ug/kg | 4.0        | U        | 1.0             | YES        | S4VEM            |
| Endrin Aldehyde     | Target       | 4.0               | U               | ug/kg | 4.0        | U        | 1.0             | YES        | S4VEM            |
| cis-Chlordane       | Target       | 0.70              | J               | ug/kg | 0.70       | JP       | 1.0             | YES        | S4VEM            |
| trans-Chlordane     | Target       | 0.51              | R               | ug/kg | 0.51       | JP       | 1.0             | YES        | S4VEM            |
| Toxaphene           | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

|                                |                       |                         |                       |
|--------------------------------|-----------------------|-------------------------|-----------------------|
| Sample Number: C0AL7           | Method: Semivolatiles | Matrix: Soil            | MA Number:            |
| Sample Location: NL-2020-SS-42 | pH:                   | Sample Date: 09/28/2020 | Sample Time: 12:15:00 |
| % Moisture:                    |                       | % Solids: 81.9          |                       |

| Analyte Name                | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|-----------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| 1,4-Dioxane                 | Target       | 82                | U               | ug/kg | 82         | U        | 1.0             | YES        | S4VEM            |
| Benzaldehyde                | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Phenol                      | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethyl)ether     | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 2-Chlorophenol              | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylphenol              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 2,2-oxybis(1-Chloropropane) | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Acetophenone                | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 320               |                 | ug/kg | 320        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 4-Bromophenyl-phenylether   | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobenzene           | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Atrazine                    | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Pentachlorophenol           | Target       | 400               | U               | ug/kg | 400        | U        | 1.0             | YES        | S4VEM            |
| Phenanthrene                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Anthracene                  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |

| Endosulfan Sulfate  | Target       | 4.1               | U               | ug/kg | 4.1        | U        | 1.0             | YES        | S4VEM            |
| 4,4-DDT             | Target       | 4.1               | U               | ug/kg | 4.1        | U        | 1.0             | YES        | S4VEM            |
| Methoxychlor        | Target       | 21                | U               | ug/kg | 21         | U        | 1.0             | YES        | S4VEM            |
| Endrin ketone       | Target       | 4.1               | U               | ug/kg | 4.1        | U        | 1.0             | YES        | S4VEM            |
| Endrin Aldehyde     | Target       | 4.1               | U               | ug/kg | 4.1        | U        | 1.0             | YES        | S4VEM            |
| cis-Chlordane       | Target       | 2.1               | U               | ug/kg | 2.1        | U        | 1.0             | YES        | S4VEM            |
| trans-Chlordane     | Target       | 2.1               | U               | ug/kg | 2.1        | U        | 1.0             | YES        | S4VEM            |
| Toxaphene           | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

|                                |                       |                         |                       |
|--------------------------------|-----------------------|-------------------------|-----------------------|
| Sample Number: C0AM1           | Method: Semivolatiles | Matrix: Soil            | MA Number:            |
| Sample Location: NL-2020-SB-21 | pH:                   | Sample Date: 09/28/2020 | Sample Time: 09:00:00 |
| % Moisture:                    |                       | % Solids: 81.4          |                       |

| Analyte Name                | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|-----------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| 1,4-Dioxane                 | Target       | 82                | U               | ug/kg | 82         | U        | 1.0             | YES        | S4VEM            |
| Benzaldehyde                | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| Phenol                      | Target       | 43                | J               | ug/kg | 43         | J        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethyl)ether     | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| 2-Chlorophenol              | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylphenol              | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| 2,2-oxybis(1-Chloropropane) | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| Acetophenone                | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 490               |                 | ug/kg | 490        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 410               | U               | ug/kg | 410        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 210               | U               | ug/kg | 210        | U        | 1.0             | YES        | S4VEM            |

| Hexachloroethane            | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 270               |                 | ug/kg | 270        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 4-Bromophenyl-phenylether   | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobenzene           | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Atrazine                    | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Pentachlorophenol           | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Phenanthrene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Anthracene                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Carbazole                   | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Di-n-butylphthalate         | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

| Analyte Name                          | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|---------------------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| Fluoranthene                          | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Pyrene                                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Butylbenzylphthalate                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 3,3-Dichlorobenzidine                 | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Benzo(a)anthracene                    | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Chrysene                              | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-ethylhexyl)phthalate            | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Di-n-octyl phthalate                  | Target       | 370               | U               | ug/kg | 370        | U        | 1.0             | YES        | S4VEM            |
| Benzo(b)fluoranthene                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Benzo(k)fluoranthene                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Benzo(a)pyrene                        | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Indeno(1,2,3-cd)pyrene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Dibenzo(a,h)anthracene                | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| Benzo(g,h,i)perylene                  | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |
| 2,3,4,6-Tetrachlorophenol             | Target       | 190               | U               | ug/kg | 190        | U        | 1.0             | YES        | S4VEM            |

| trans-Chlordane     | Target       | 0.41              | J               | ug/kg | 0.41       | JP       | 1.0             | YES        | S4VEM            |
| Toxaphene           | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

|                                |                       |                         |                       |
|--------------------------------|-----------------------|-------------------------|-----------------------|
| Sample Number: C0AN1           | Method: Semivolatiles | Matrix: Soil            | MA Number:            |
| Sample Location: NL-2020-SB-31 | pH:                   | Sample Date: 09/28/2020 | Sample Time: 12:45:00 |
| % Moisture:                    |                       | % Solids: 84.3          |                       |

| Analyte Name                | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|-----------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| 1,4-Dioxane                 | Target       | 79                | U               | ug/kg | 79         | U        | 1.0             | YES        | S4VEM            |
| Benzaldehyde                | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Phenol                      | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethyl)ether     | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 2-Chlorophenol              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylphenol              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 2,2-oxybis(1-Chloropropane) | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Acetophenone                | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 210               |                 | ug/kg | 210        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Bromophenyl-phenylether   | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobenzene           | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Atrazine                    | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Pentachlorophenol           | Target       | 390               | U               | ug/kg | 390        | U        | 1.0             | YES        | S4VEM            |
| Phenanthrene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Anthracene                  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

| 4,4-DDE             | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| Endrin              | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| Endosulfan II       | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| 4,4-DDD             | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| Endosulfan Sulfate  | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| 4,4-DDT             | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| Methoxychlor        | Target       | 20                | U               | ug/kg | 20         | U        | 1.0             | YES        | S4VEM            |
| Endrin ketone       | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| Endrin Aldehyde     | Target       | 3.8               | U               | ug/kg | 3.8        | U        | 1.0             | YES        | S4VEM            |
| cis-Chlordane       | Target       | 2.0               | U               | ug/kg | 2.0        | U        | 1.0             | YES        | S4VEM            |
| trans-Chlordane     | Target       | 2.0               | U               | ug/kg | 2.0        | U        | 1.0             | YES        | S4VEM            |
| Toxaphene           | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

|                                |                       |                         |                       |
|--------------------------------|-----------------------|-------------------------|-----------------------|
| Sample Number: C0AN7           | Method: Semivolatiles | Matrix: Soil            | MA Number:            |
| Sample Location: NL-2020-SB-37 | pH:                   | Sample Date: 09/28/2020 | Sample Time: 15:15:00 |
| % Moisture:                    |                       | % Solids: 85.5          |                       |

| Analyte Name                | Analyte Type | Validation Result | Validation Flag | Units | Lab Result | Lab Flag | Dilution Factor | Reportable | Validation Level |
|-----------------------------|--------------|-------------------|-----------------|-------|------------|----------|-----------------|------------|------------------|
| 1,4-Dioxane                 | Target       | 78                | U               | ug/kg | 78         | U        | 1.0             | YES        | S4VEM            |
| Benzaldehyde                | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| Phenol                      | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethyl)ether     | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| 2-Chlorophenol              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylphenol              | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| 2,2-oxybis(1-Chloropropane) | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| Acetophenone                | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| 4-Methylphenol              | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| N-Nitroso-di-n-propylamine  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachloroethane            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Nitrobenzene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Isophorone                  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitrophenol               | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dimethylphenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Bis(2-Chloroethoxy)methane  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dichlorophenol          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Naphthalene                 | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloroaniline             | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobutadiene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Caprolactam                 | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| 4-Chloro-3-methylphenol     | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Methylnaphthalene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorocyclopentadiene   | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| 2,4,6-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4,5-Trichlorophenol       | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,1-Biphenyl                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Chloronaphthalene         | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2-Nitroaniline              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Dimethylphthalate           | Target       | 220               |                 | ug/kg | 220        |          | 1.0             | YES        | S4VEM            |
| 2,6-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthylene              | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 3-Nitroaniline              | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| Acenaphthene                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrophenol           | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitrophenol               | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| Dibenzofuran                | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 2,4-Dinitrotoluene          | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Diethylphthalate            | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Fluorene                    | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Chlorophenyl-phenylether  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Nitroaniline              | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| 4,6-Dinitro-2-methylphenol  | Target       | 380               | U               | ug/kg | 380        | U        | 1.0             | YES        | S4VEM            |
| N-Nitrosodiphenylamine      | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 1,2,4,5-Tetrachlorobenzene  | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| 4-Bromophenyl-phenylether   | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |
| Hexachlorobenzene           | Target       | 200               | U               | ug/kg | 200        | U        | 1.0             | YES        | S4VEM            |

# Sample Summary Report

Project Name: NORWOOD LANDFILL Project

GroupID: 49088/EPW14030/C0AJ6

Lab Name: Chemtech Consulting Group

Sample Number: C0AP1

Method: Aroclors

Matrix: Soil

MA Number:

Sample Location: NL-2020-SB-41

pH:

Sample Date: 09/28/2020

Sample Time: 11:00:00

% Moisture:

% Solids: 76.9
