Registration Division Work Plan for the Registration of Conventional Pesticide

FY2002 New Chemical Registration Candidates

The Registration Division's FY2002 Work Plan identifies 16 new chemical candidates and 3 imports for decision-making during the fiscal year. Seven (7) of these chemicals are for reduced-risk chemicals, and three potential alternative for organophosphate. From these 16 candidates, the Agency anticipates making 12 registration decisions.

The work plan includes more candidates than anticipated actual decisions. It serves as a candidate pool for achieving the registration program's regulatory goals for the fiscal year and has historically included more decision candidates than anticipated completions to ensure that the Agency's regulatory goals are met.

Food-Use Inert Registration Candidates

New Chemical Registration Candidates The listing below identifies approximately 378 potential new uses for 50 already-registered chemicals. Many of these new uses are for compounds currently classified as "reduced-risk pesticides". As opportunities arise during the course of the fiscal year, additional new use candidates may be added to this list for decision-making. Any additions to this list will be subjected to the prioritization criteria outlined in Pesticide Registration Notice <u>97-2</u> and <u>98-7</u>.

From these new use candidates, the Agency anticipates issuing 230 new use decisions. The work plan includes more candidates than anticipated actual decisions. It serves as a candidate pool for achieving the registration program's regulatory goals for the fiscal year and has historically included more decision candidates than anticipated completions to ensure that the Agency's regulatory goals are met.
