

## **Camp Minden Dialogue Committee**

Technical Workgroup Meeting February 25, 2015

11 AM to 1 PM central time

### **On-line link**

<https://epa.connectsolutions.com/mindendialogue>

### **Call-in Information**

(800) 450-5189

Conference ID number: 92058188 □

## **DRAFT AGENDA AND TOPICS**

- 1) General Updates and Questions
- 2) EPA review of M6 treatment in other regions
  - EPA has begun assembling this information, a draft document is attached
- 3) EPA was asked the status of other materials at Camp Minden
  - EPA has prepared a table of this information which is attached
- 4) Immersion of materials in water for transport
  - Short answer is that materials can be immersed and transported safely, the key is to understand what is being planned on the other end and how that immersion affects possible treatment, adds weight and volume to transportation and also creates waste water that has to be managed
  - A specific request has gone to DoD to provide a detailed description the constraints and ramifications of taking this approach, and they are working on this
- 5) Status of stability
  - We have received the TAV report from December which offers some further insights
  - We have asked the DoD to provide a detailed, plain language summary of this situation and they have agreed to prepare one
- 6) Status of our list of technologies
  - We don't expect any additional ESB approved technologies that are tested and approved for M6
  - We are working to integrate updates to the table and will provide the latest version by the time of the call
