The exclusion zones for Area E/E Line and Area I/I Line will be 1250 feet for each burn area. That will be the “primary fenceline monitoring”. The second monitoring location would be at the fenceline of Camp Minden. The prevailing wind/weather direction is toward Dixie Inn (4.25 mi NE of Area E) and the closest community to E line (against the wind/weather direction) is Doyline (1.7 mi SSW of Area E).
