

TCEQ Interoffice Memorandum

To: Interested Parties

From: Toxicology Division, Office of Executive Director

Date: March 17, 2014

Subject: **March** 2014 Effects Screening Levels

Attached is the latest update of the list of Effects Screening Levels (ESLs) currently used by the TCEQ Toxicology Division for air permitting. This update replaces the list released on February 1, 2013. ESLs, expressed in terms of microgram per cubic meter ($\mu\text{g}/\text{m}^3$) or parts per billion by volume (ppbv) in air, are used to evaluate potential for effects to occur as a result of exposure to concentrations of constituents in the air. ESLs are based on data concerning health effects, odor/nuisance potential, and effects on vegetation. They are not ambient air standards. If predicted or measured airborne levels of a constituent do not exceed the screening level, adverse health or welfare would not be expected to result. If ambient levels of constituents in air exceed the screening level, it does not necessarily indicate a problem, but a more in-depth review is conducted.

We would like to call attention to several notations used on the list. Short-term ESLs are listed for each constituent.

- “Short-term” generally indicates a 1-hour averaging period. However, exceptions are noted parenthetically after the name of the constituent.
- “Long-term” indicates an annual averaging period.
- “Final” indicates that the ESL was updated using the revised ESL development guidelines (RG-442).
- “Under review” indicates that the ESL is currently being reviewed by the Toxicology Division.
- “Interim” indicates that the ESL is current and will be reviewed by the Toxicology Division at a later date. Also, interim ESLs can be updated pending the release of updated toxicity information or odor data.

For any compound that is designated as particulate matter (PM), the compound will be evaluated on individual basis as PM10, *except for long-term crystalline silica and coal dust, which will be evaluated as PM4*. The total particulate matter represented in each permit evaluation must meet the National Ambient Air Quality Standard. For any constituent composed of at least 5% of benzene, benzene emissions will have to be modeled and evaluated separately. Bold means that a new or change has been made to that chemical since the last released version.

If you cannot find a listing for a particular constituent, this does not mean a health effects review is not required. A default short-term ESL of 2 µg/m³ can be used, or you may contact the Toxicology Division to determine if a screening level has been established for a constituent that is not in this list. **In the interest of time and resources, the Toxicology Division requests that you please conduct a thorough search of the Published ESL List with CAS numbers and synonyms of the constituent of interest prior to contacting the Toxicology Division. If a request has been received with constituents that are listed on the Published ESL List, it will be returned.** For any technical questions, please feel free to contact Ross Jones at 512-239-1804 or email at ross.jones@tceq.texas.gov or Jong-Song Lee at 512-239-1790 or email at iong-song.lee@tceq.texas.gov.

Finally, all further updates regarding ESLs will be posted on the Toxicology Web page when available:

QUICK SEARCH TOOL

To aid in the search to determine if a constituent has already been included in the Published ESL List, the Toxicology Division is providing this quick search tool. This tool is only meant to be a **First Pass Screening; only exact matches to data in the Published ESL List will result in a "Yes"**. Please search by CAS number **AND** by Chemical Name and Synonym(s) to see if the constituent is currently listed on the Published ESL List. **If a value of "No" is returned, please manually check the list using the Find function for those constituents before requesting an ESL from the Toxicology Division.** If a request is received with constituents that are currently listed on the Published ESL List, it will be returned.

Search for CAS No	Is the CAS No in the Published List?	Search for Chemical Name	Is the Chemical Name in the Published List?
