

Why is it important to protect our families from pesticides?

Children are more vulnerable.

- Children are more easily exposed to pesticides because of their small bodies and behaviors.
- Sometimes, without realizing it, a parent can expose his or her child to pesticides.

Pesticides are dangerous.

- Pesticides are chemicals that are used to kill insects and weeds.
- Pesticides are used in the fields and also in our homes.
- These chemicals can make us sick, even kill us.

Exposure is constant.

- Contact with pesticides can occur throughout the day.
- Exposure to pesticides sometimes happens without us realizing.
- You can be exposed at work or at home with the family.

Do your part!

- Everyone at home can be affected by pesticide residue.
- Parents, teachers, and children can all help to reduce the risk of pesticide exposure around families.

Another tip to protect your family from pesticides...Write your own!

How can we protect our families from pesticides?

LEAF

Limiting Exposures Around Families

Clean thoroughly the places where pesticide residues can be found.

Bathe with shampoo and soap directly after working.

Remove work boots before entering the house.

Wash your work clothes separately from the family's clothes.

Mark the box when the step has become part of your family's routine.

Protect your family from pesticides... It's easy!

Wash fruits and vegetables before eating them.

Have the whole family wash their hands before eating, drinking, or going to the bathroom.

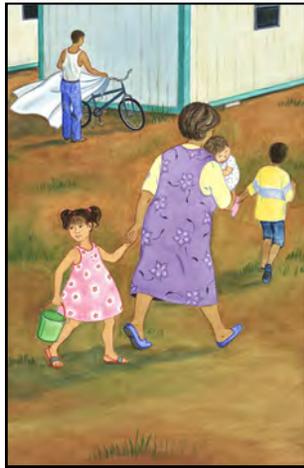

Prevent insects from entering your home by sealing cracks and keeping the house clean and dry.

Do not bring agricultural pesticides home.

Avoid areas where pesticides are being sprayed.

Keep all cleaning and pesticide products outside of children's reach.

Close windows, turn off ventilators, and cover outside equipment when pesticides are being sprayed near your house.
