

# Corps / EPA Compensatory Mitigation Rule: Complex Issues

Regulatory Branch  
U.S. Army Corps of Engineers

Office of Wetlands, Oceans and Watersheds  
U.S. Environmental Protection Agency

January 2009

# Topics

- Service areas for third party mitigation
- Site protection
- Financial assurances
- Long-term management
- Adaptive management
- Catastrophic events

# Service Areas

“...watershed, ecoregion, physiographic province, and/or other geographic area within which the mitigation bank or in-lieu fee program is authorized to provide compensatory mitigation ...”

*(33 CFR 332.8/40 CFR 230.98)*

# Service Areas

- *Scale:*

“...appropriately sized to ensure that the aquatic resources provided will effectively compensate for adverse environmental impacts across the entire service area.”

- *Examples:*

- In urban areas, an 8-digit HUC watershed or smaller may be appropriate.
- In rural areas, several contiguous 8-digit HUCs or a 6-digit HUC watershed may be appropriate.

# Service Areas

## Considerations

- “... locally-developed standards and criteria...”
- “...economic viability of ... bank or in-lieu fee program may also be considered in determining the size of the service areas.”
- “...basis for determining service area must be documented in writing and referenced in the mitigation banking instrument.”
- “...where watershed boundaries do not exist, such as marine areas...appropriate spatial scale should be used to replace lost functions and services within the same ecological system (e.g., reef complex, littoral drift cell).”

# Service Areas

## Problems

- “Watershed” & “geographic area” have no set scale.
- HUCs, political & ecoregion boundaries can be very large or very small, unrelated to aquatic resources.
- In some areas, watersheds are difficult to define

# Watershed Boundary Dataset (WBD)

## Hydrologic Units

2-digit *Regions* (22)

avg - 177,560 sq. miles

4-digit *Subregions* (222)

avg - 16,800 sq. miles

6-digit *Basins* (379)

avg - 10,596 sq. miles

8-digit *Subbasins* (2,267)

avg - 703 sq. miles

10-digit *Watersheds* (est. 22,000)

avg - 40,000 - 250,000 acres

12-digit *Subwatersheds* (est. 160,000)

avg - 10,000 - 40,000 acres

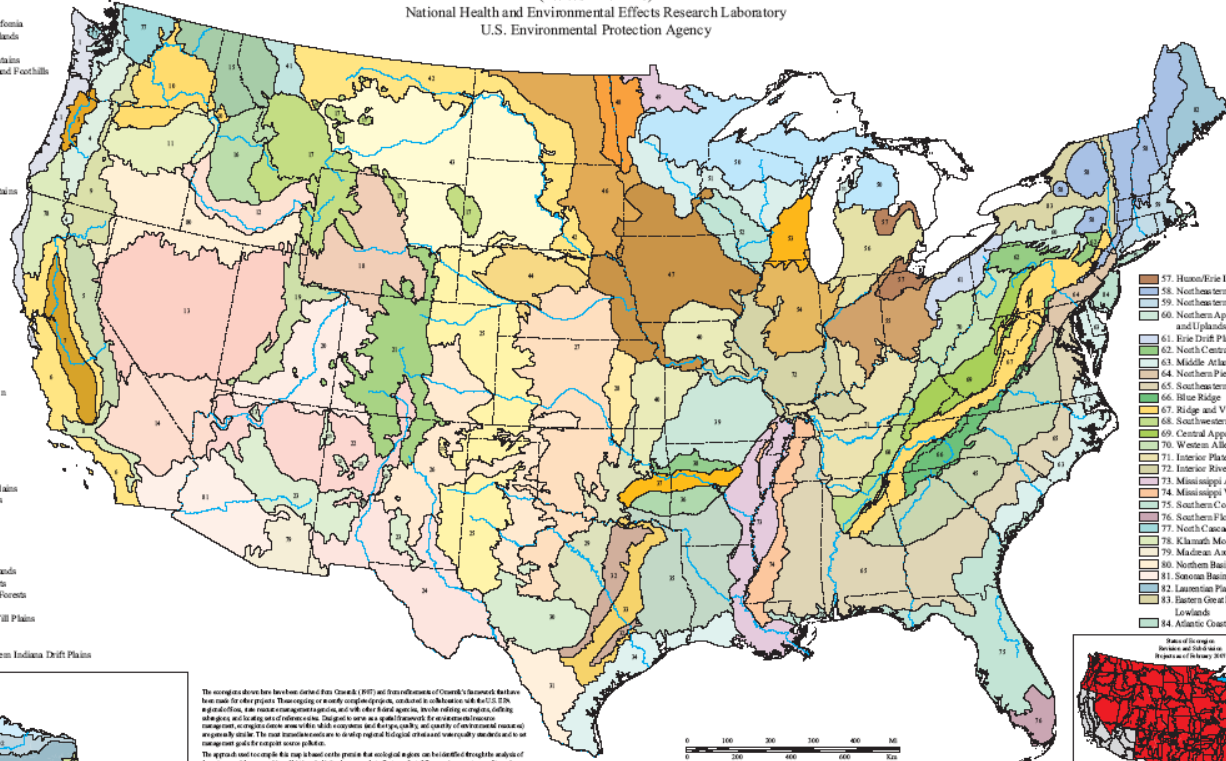

# Level III Ecoregions of the Continental United States

(Revised March 2007)

National Health and Environmental Effects Research Laboratory  
U.S. Environmental Protection Agency

- 1. Coast Range
- 2. Puget Lowland
- 3. Willamette Valley
- 4. Cascades
- 5. Sierra Nevada
- 6. Southern and Central California Chaparral and Oak Woodlands
- 7. Central California Valley
- 8. Southern California Mountains
- 9. Eastern Cascades Slopes and Foothills
- 10. Columbia Plateau
- 11. Blue Mountains
- 12. Snake River Plain
- 13. Central Basin and Range
- 14. Mojave Basin and Range
- 15. Northern Rockies
- 16. Idaho Batholith
- 17. Middle Rockies
- 18. Wyoming Basin
- 19. Washach and Uinta Mountains
- 20. Colorado Plateau
- 21. Southern Rockies
- 22. Arizona/New Mexico Plateaus
- 23. Arizona/New Mexico Mountains
- 24. Chihuahuan Deserts
- 25. High Plains
- 26. Southeastern Tablelands
- 27. Central Great Plains
- 28. Flint Hills
- 29. Cross Timbers
- 30. Edwards Plateau
- 31. Southern Texas Plains
- 32. Texas Blackland Prairies
- 33. East Central Texas Plains
- 34. Western Gulf Coastal Plain
- 35. South Central Plains
- 36. Osage Hills
- 37. Arkansas Valley
- 38. Boston Mountains
- 39. Ozark Highlands
- 40. Central Irregular Plains
- 41. Canadian Rockies
- 42. Northwestern Glaciated Plains
- 43. Northwestern Great Plains
- 44. Nebraska Sand Hills
- 45. Piedmont
- 46. Northern Glaciated Plains
- 47. Western Corn Belt Plains
- 48. Lake Agassiz Plain
- 49. Northern Minnesota Wetlands
- 50. Northern Lakes and Forests
- 51. North Central Hardwood Forests
- 52. Driftless Area
- 53. Southeastern Wisconsin Till Plains
- 54. Central Corn Belt Plains
- 55. Eastern Corn Belt Plains
- 56. Southern Michigan/Northern Indiana Drift Plains

- 57. Huron/Erie Lake Plains
- 58. Northern Highlands
- 59. Northern Coastal Zone
- 60. Northern Appalachian Plateau and Uplands
- 61. Erie Drift Plains
- 62. North Central Appalachians
- 63. Middle Atlantic Coastal Plain
- 64. Northern Piedmont
- 65. Southern Plains
- 66. Blue Ridge
- 67. Ridge and Valley
- 68. Southeastern Appalachians
- 69. Central Appalachians
- 70. Western Allegheny Plateau
- 71. Interior Plateau
- 72. Interior River Valleys and Hills
- 73. Mississippi Alluvial Plains
- 74. Mississippi Valley Loess Plains
- 75. Southern Coastal Plain
- 76. Southern Florida Coastal Plain
- 77. North Cascades
- 78. Klamath Mountains
- 79. Madras Archipelago
- 80. Northern Basin and Range
- 81. Southern Basin and Range
- 82. Laurentian Plains and Hills
- 83. Eastern Great Lakes and Hudson Lowlands
- 84. Atlantic Coastal Pine Barrens

- 101. Arctic Coastal Plain
- 102. Arctic Icefields
- 103. Brooks Range
- 104. Interior Tundra Lowlands and Uplands
- 105. Interior Highlands
- 106. Interior Boreal Forests
- 107. Yukon Flats
- 108. Ogish Mountains
- 109. Subarctic Coastal Plains
- 110. Seward Peninsula
- 111. Adirondack-Elk Mountains
- 112. Interior Bay-Northglac Lowlands
- 113. Alaska Peninsular Mountains
- 114. Alaskan Boreal (Westermontion) Interior Forests
- 115. Cook Inlet
- 116. Alaskan Range
- 117. Copper Plains
- 118. Wrangell Mountains
- 119. Pacific Coastal Mountains
- 120. Coastal Western Boreal-Boreal Spruce Forests

The ecoregions shown here have been defined by Cowell (1987) and have modifications of Cowell's boundaries that have been made for other purposes. The mapping of ecoregions is a subjective task and is not intended to be a final, definitive statement on the subject. The ecoregions are defined based on a variety of factors, including climate, geology, and vegetation. The ecoregions are defined based on a variety of factors, including climate, geology, and vegetation. The ecoregions are defined based on a variety of factors, including climate, geology, and vegetation.

# Service Areas

## Some Approaches

Watersheds (or Hydrologic Units)

Other—Landform regions, ecoregions, administrative, combinations

Primary & Secondary service areas

# Why Watersheds?

General understanding that water quantity and quality at a point on a stream reflects aggregate of characteristics of topography up gradient from that point

-- thus suitable for spatially organizing ecosystem management or water quality management

[ from: <http://www.epa.gov/bioiweb1/html/ecoregions.html> ]

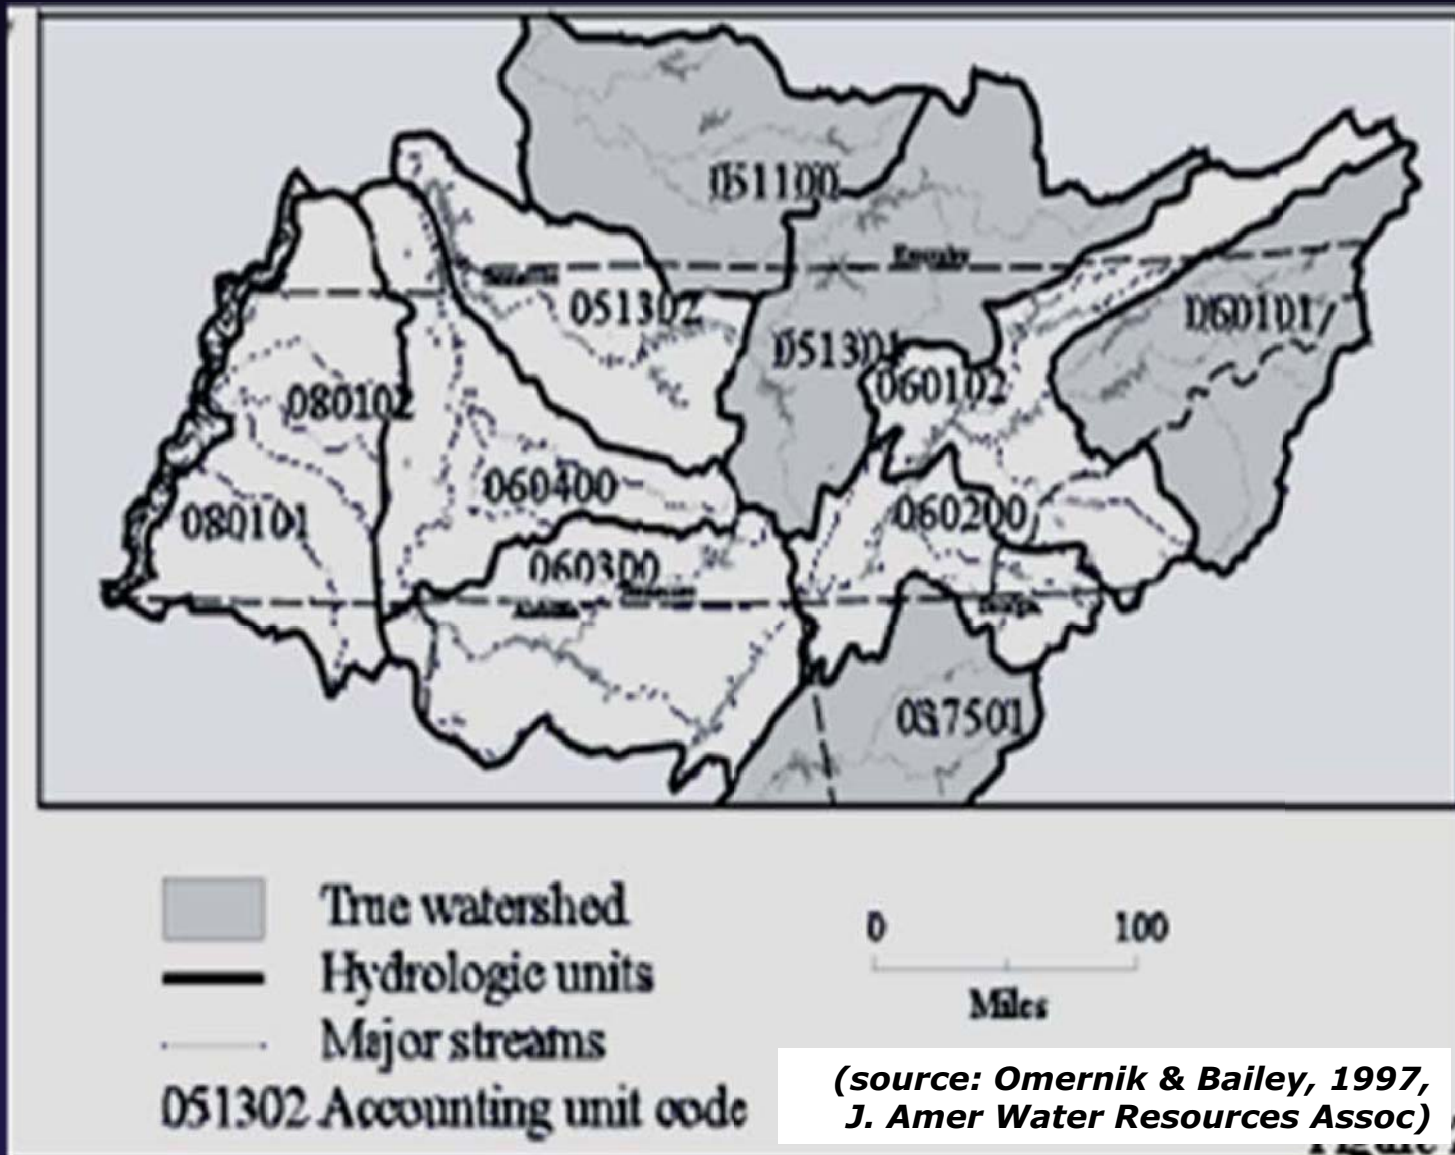

# Watershed

- “...means a land area that drains to a common waterway, such as a stream, lake, estuary, wetland, or ultimately the ocean.”

*33 CFR 332.2 Definitions*

# Watersheds: HUC-6s and HUC-8s

USGS 8-DIGIT CATALOGING UNITS- NORTH CAROLINA

# Why Ecoregions?

Intended to provide a spatial framework for ecosystem assessment, research, inventory, monitoring, and management

-- delimit large areas within which local ecosystems reoccur more or less throughout region in predictable patterns

[ from: <http://www.epa.gov/bioiweb1/html/ecoregions.html> ]

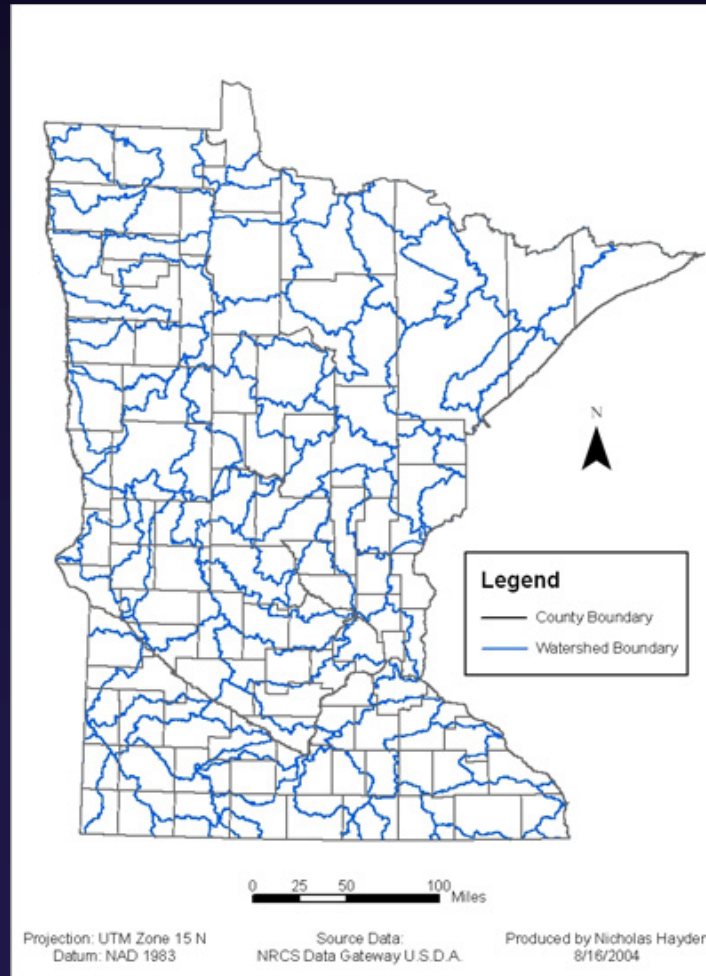

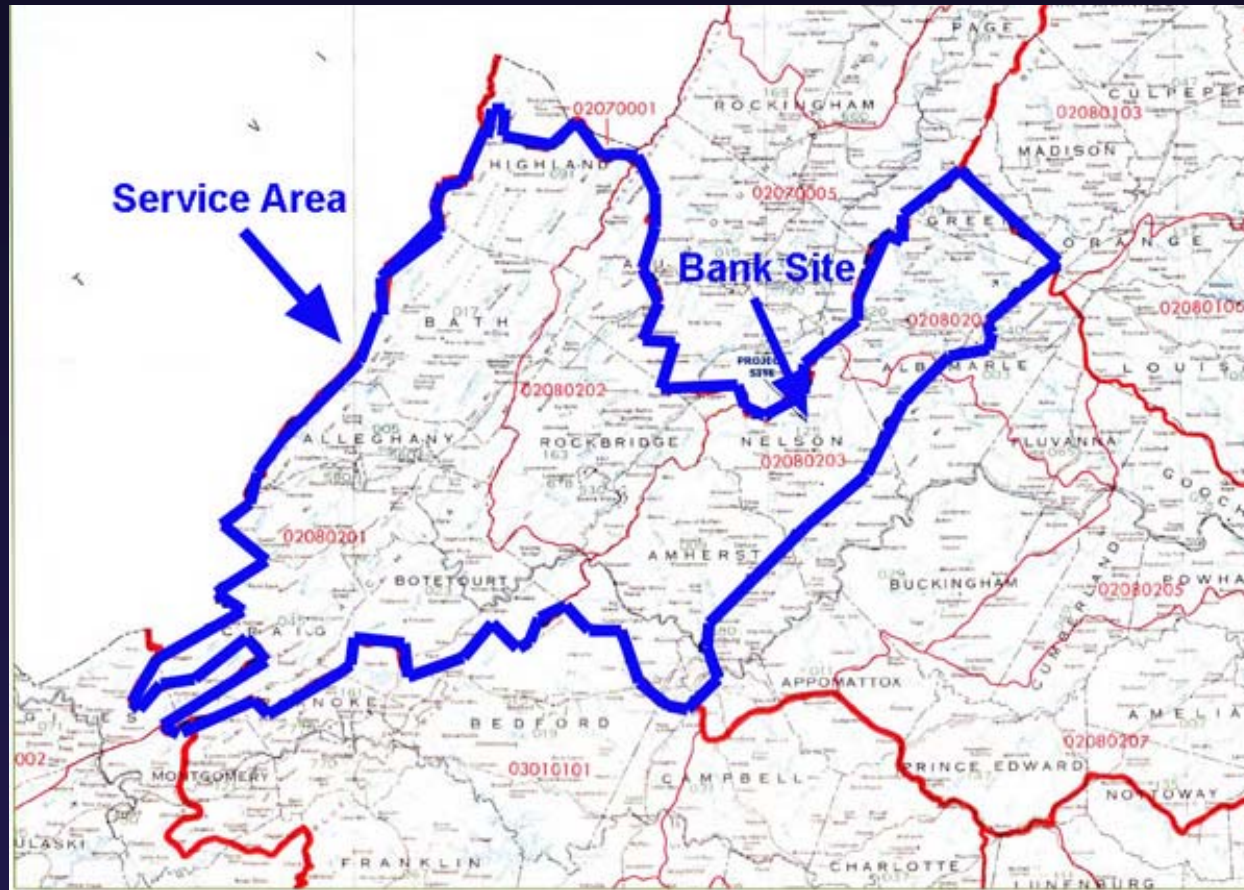

# Other – Combination Service Area

- In Minnesota, state law requires that impacts be compensated in the same county or watershed.

# Other – VA State Law & physiography

# Other Physical Regions

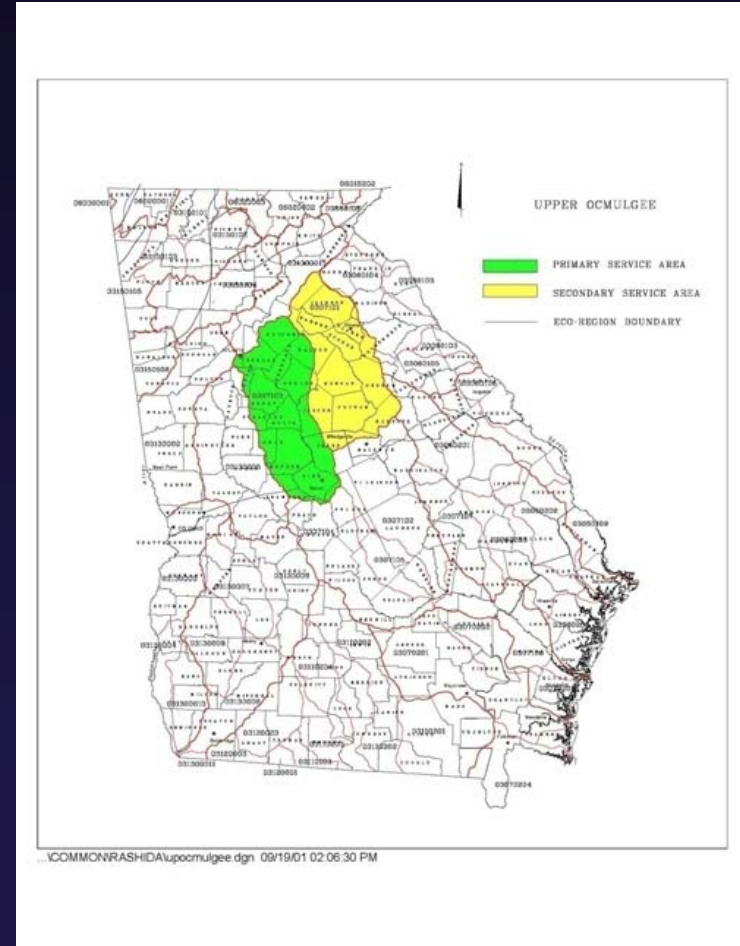

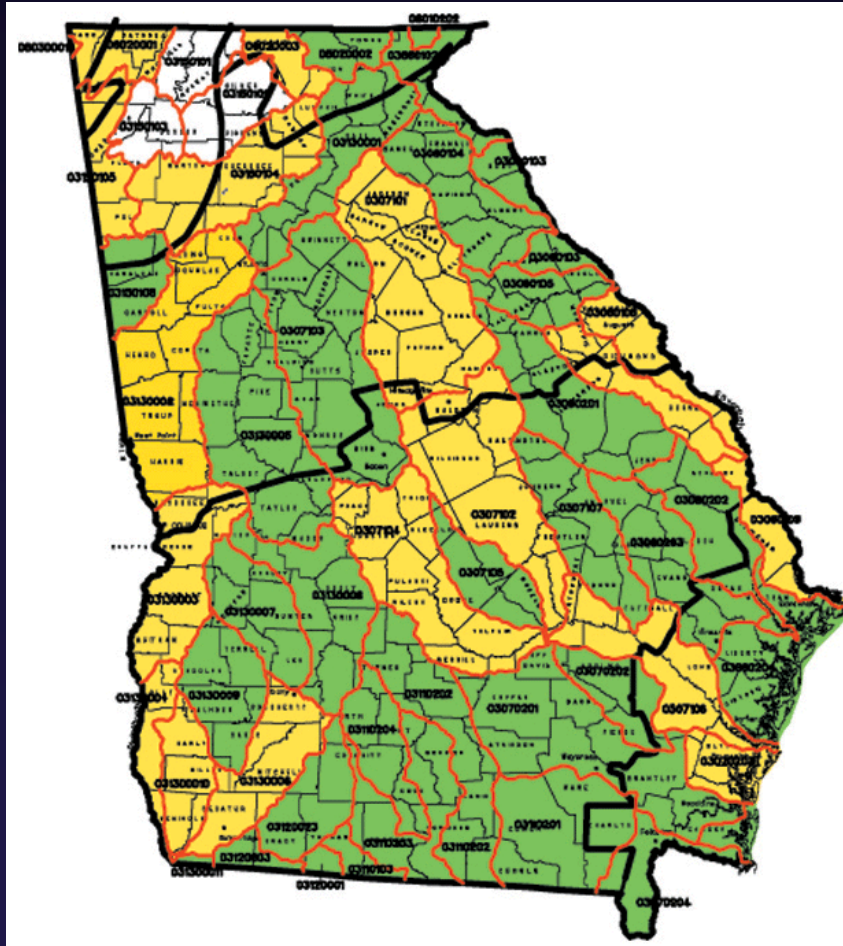

- Littoral Cells

**“Compensation for impacts to aquatic resources in coastal watersheds (watersheds that include a tidal water body) should also be located in a coastal watershed where practicable.”**

***[in: Type and Location of Compensatory Mitigation, 33CFR 332.3]***

# Primary & Secondary Service Areas

# Other approaches?

## Proximity Factors
