August 6, 2016 – EPA monitored for seven ambient air pollutants over a 24 hour period at the Camp Minden North air monitoring location. The seven pollutants included carbon monoxide, carbon dioxide, nitrogen oxide, nitrogen dioxide, nitrogen oxides, sulfur dioxide, and fine particulates. Over the 24 hour period, each of these pollutants were detected below EPA’s National Ambient Air Quality Standards or the action benchmark when an air quality standard had not been previously established.

Below is a summary of Camp Minden Air Monitoring Data collected at the location referenced above. The table contains a detailed listing of the following:

- 1 Average reading of each analyte from August 5, 2016 1800 through August 6, 2016, 2016 1800
- 2 Highest measurement of each analyte from August 5, 2016 1800 through August 6, 2016 1800

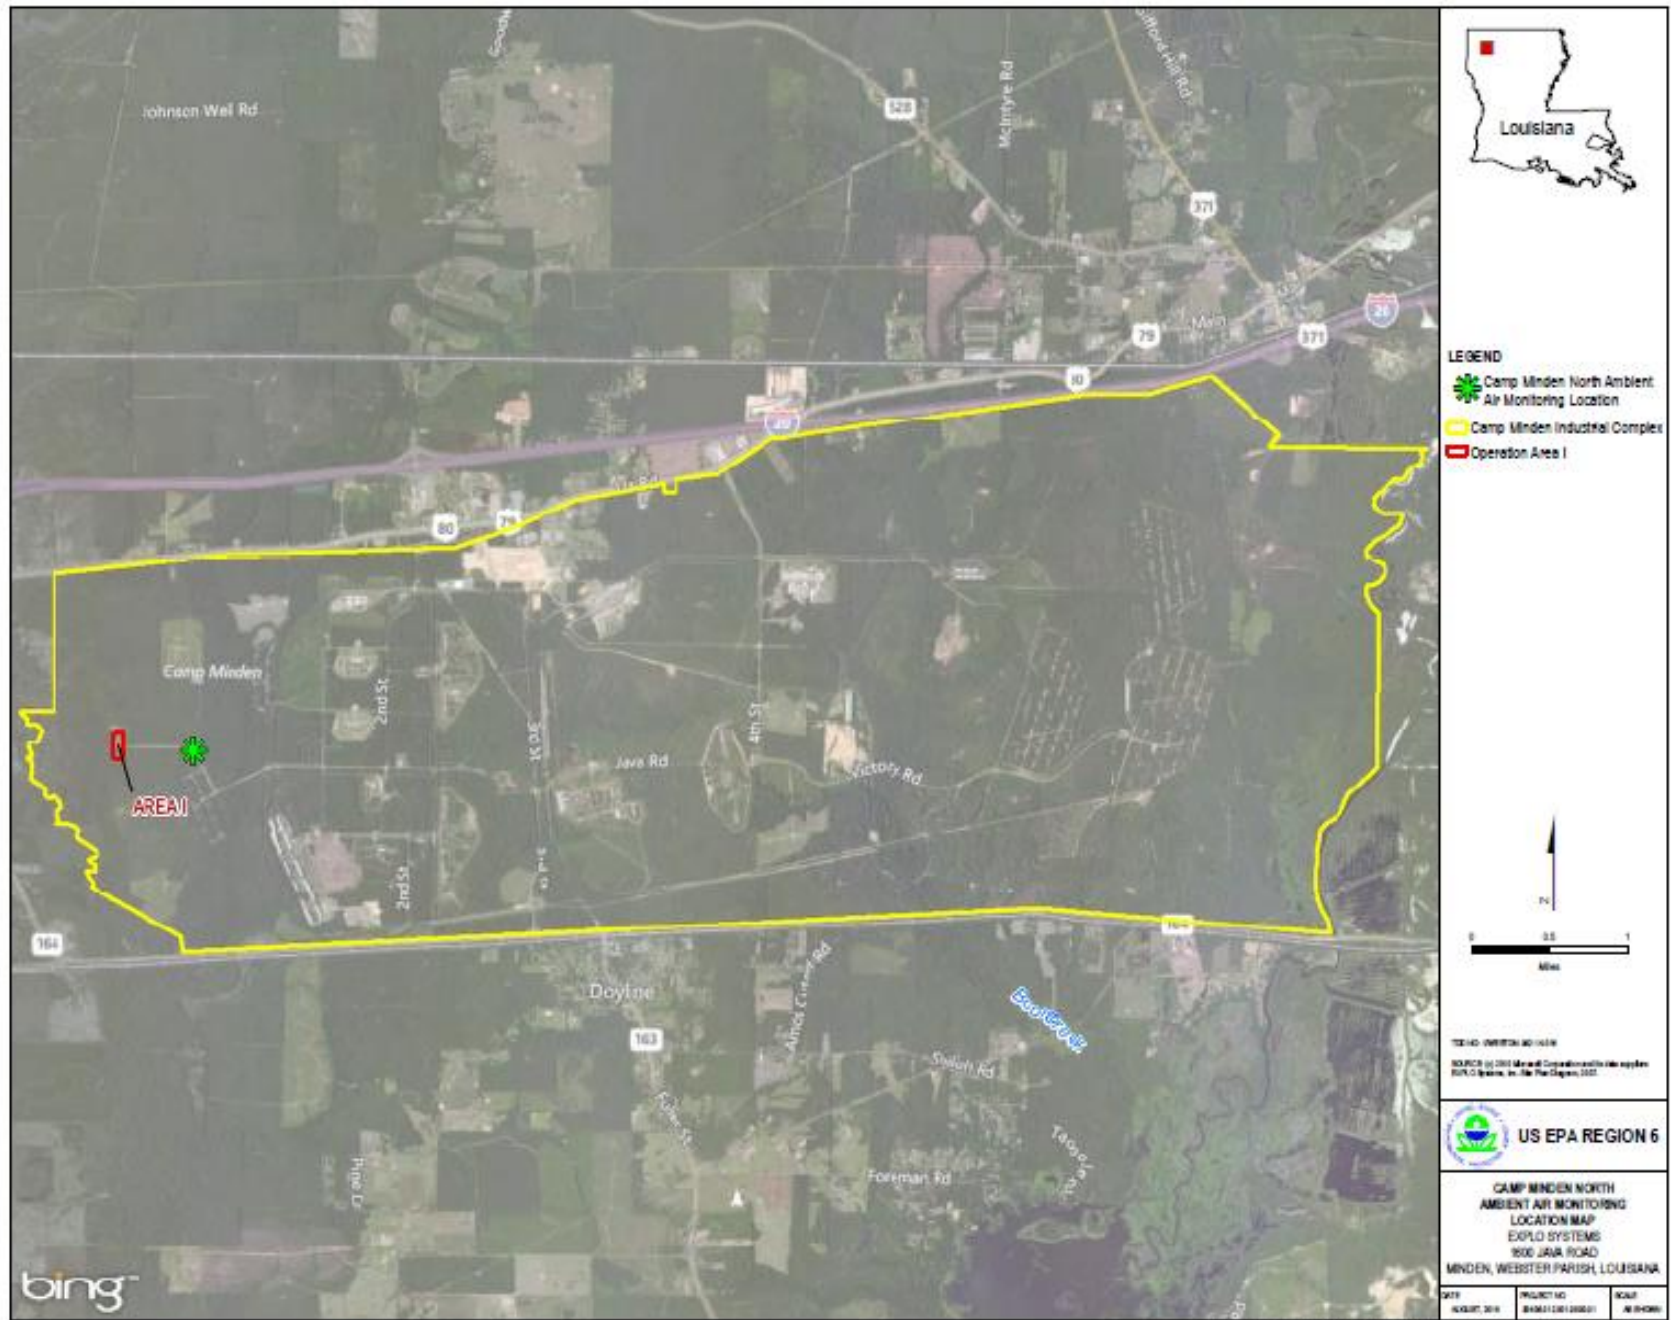

National Ambient Air Quality Standards (NAAQS) of criteria pollutants (CO, NO<sub>2</sub>, SO<sub>2</sub>, and PM<sub>2.5</sub>) are listed with specific time frames and calculation formulas. Please visit NAAQS website for more in-depth information on how these are calculated - <https://www.epa.gov/criteria-air-pollutants/naqs-table>.

**\*\* Note:** All analyzers were operating normally except PM<sub>2.5</sub>. PM<sub>2.5</sub> continues invalid until replacement. There was a brief disruption to the data at 1756 CDT, appeared to be a momentary power outage due to thunderstorm. Systems recovered to normal within a few minutes of the interruption.
