Air Monitoring Summary

Camp Minden Area I

Start Time: 11-01-2016 1800 - End Time: 11-02-2016 1800

November 2, 2016 – EPA monitored for seven ambient air pollutants over a 24 hour period at the Camp Minden Area I air monitoring location. The seven pollutants included carbon monoxide, carbon dioxide, nitrogen oxide, nitrogen dioxide, nitrogen oxides, sulfur dioxide, and fine particulates. Over the 24 hour period, each of these pollutants were detected below EPA’s National Ambient Air Quality Standards or the action benchmark when an air quality standard had not been previously established.

Below is a summary of Camp Minden Air Monitoring Data collected at the location referenced above. The table contains a detailed listing of the following:

- 1 Average reading of each analyte from November 1, 2016 1800 through November 2, 2016, 2016 1800
- 2 Highest measurement of each analyte from November 1, 2016 1800 through November 2, 2016 1800

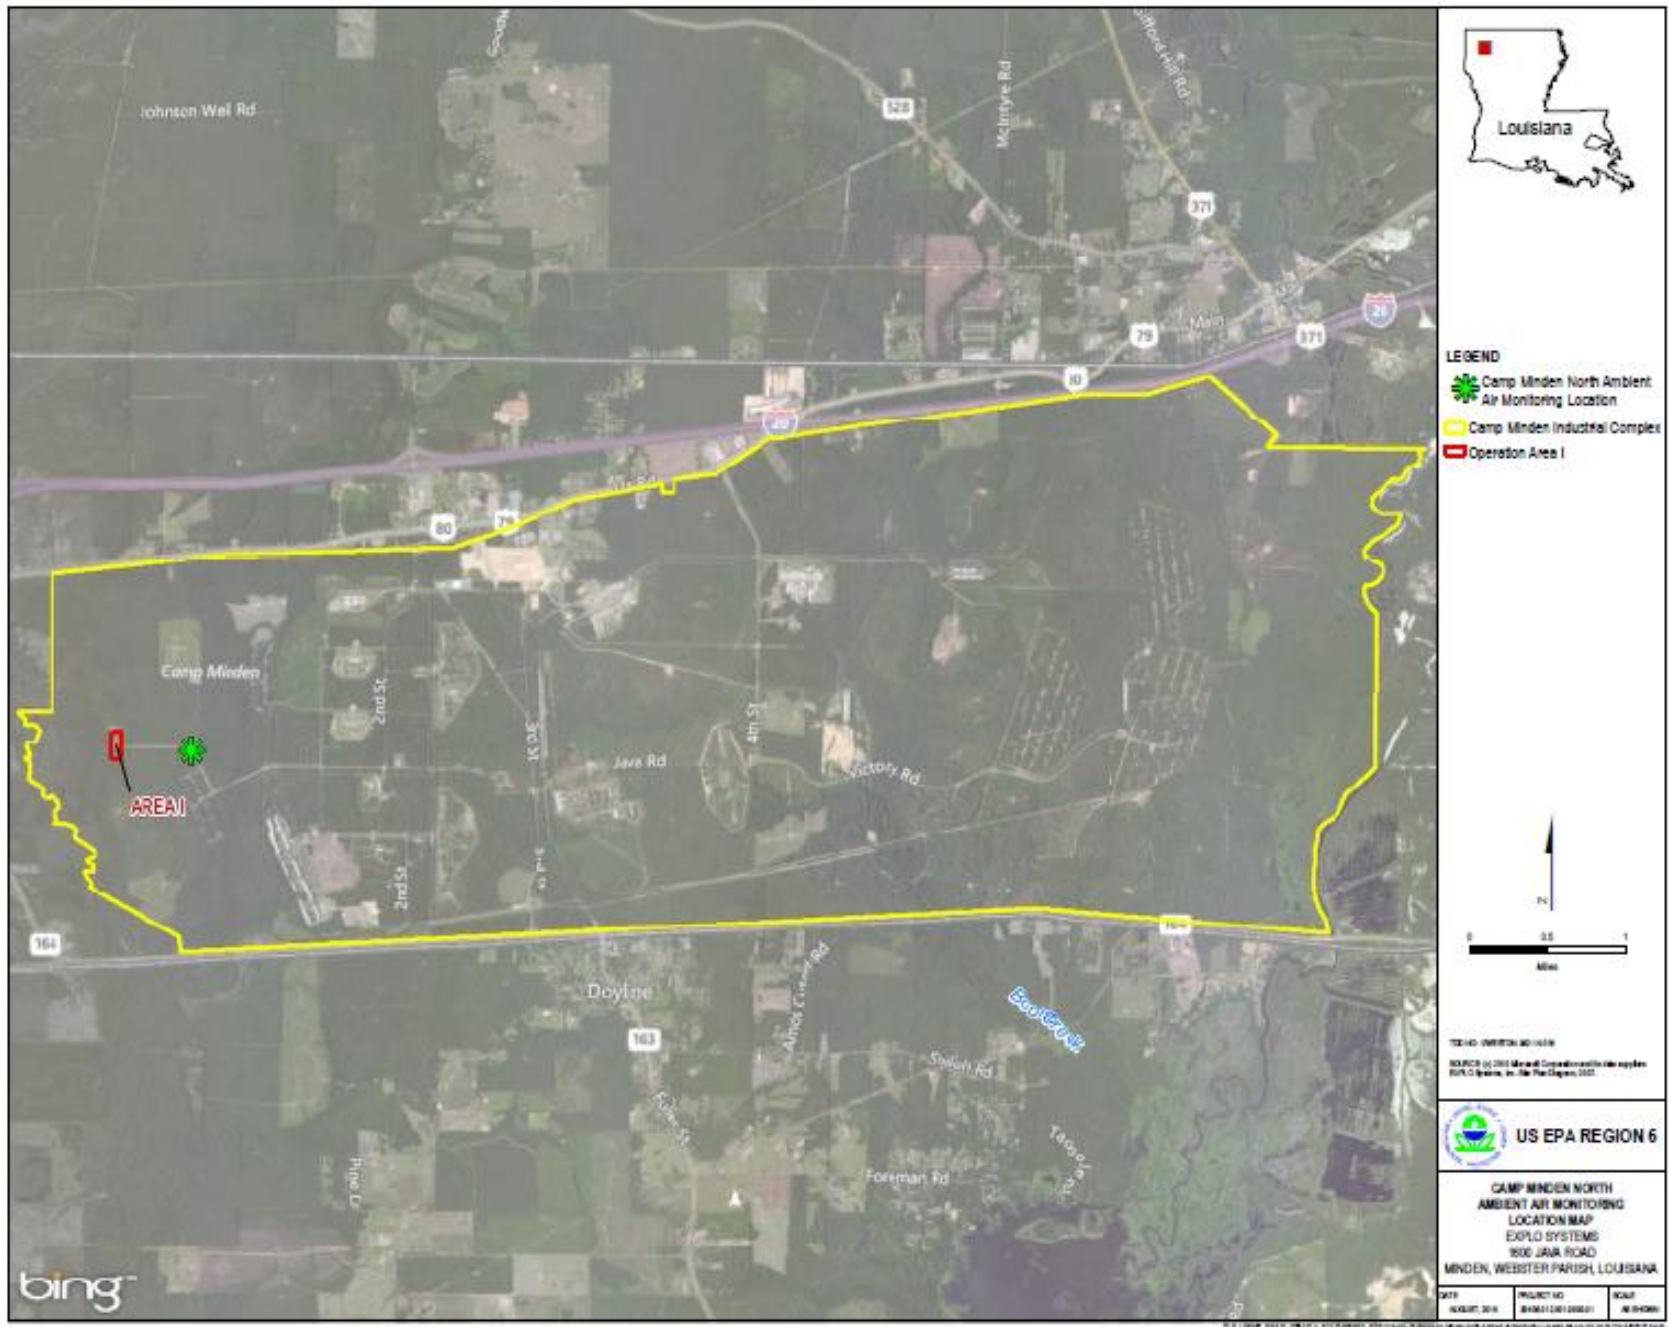

National Ambient Air Quality Standards (NAAQS) of criteria pollutants (CO, NO₂, SO₂, and PM_{2.5}) are listed with specific time frames and calculation formulas. Please visit NAAQS website for more in-depth information on how these are calculated - <https://www.epa.gov/criteria-air-pollutants/naqs-table>.

** The monitoring database has been validated for calendar day 11/02/16 (through 00:00 11/03/16 CST). All analyzers were operating normally. There was a momentary spike in 1-minute CO to 2.5 ppm from 0605-0607 CDT; there were minor increases in other pollutants. Winds were < 1.5 mph from SE. There were elevated 1-minute NO_x readings from 1651-1704 CDT, peaking briefly at 220 ppb. There were slight increases in other gas analyzers during the period. Winds were 4 – 8 mph from the ESE. The trailer logger was reset at 0601 and 1402 CDT to clear Modbus communications (program reloaded at 1402). Weather station was reset at 1159 CDT to restore communications.

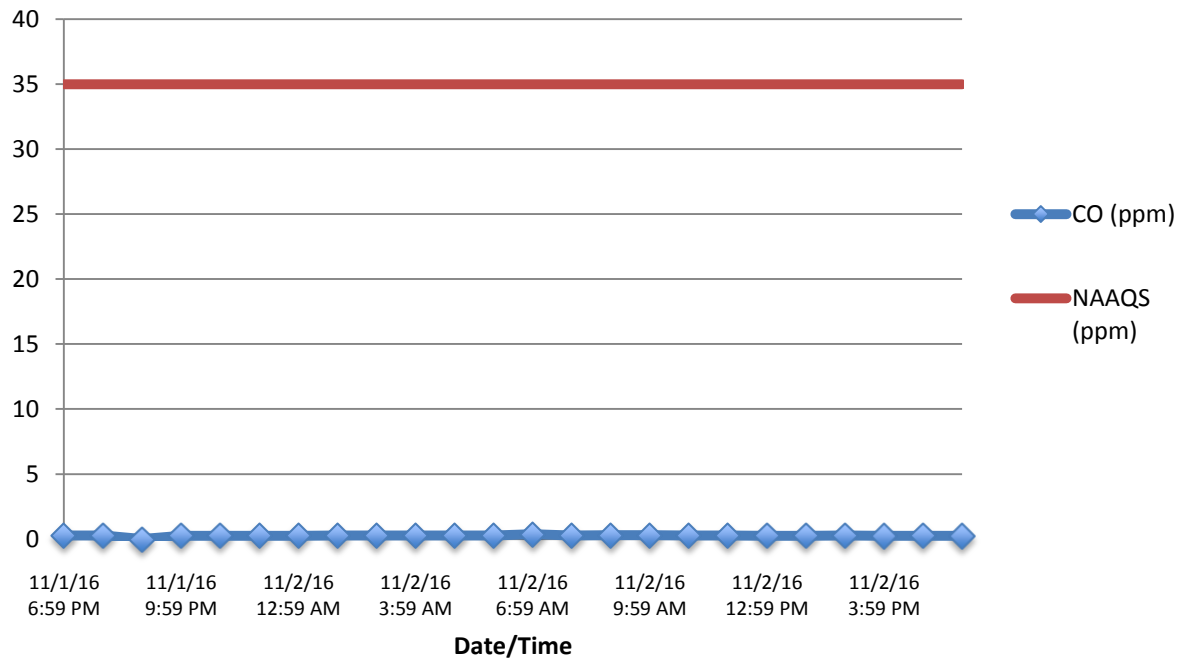

Summary for 2 November 2016 at Camp Minden Area I
