# 1 Overall Approach

---

This appendix describes EPA/OPPT's initial methods, approaches and procedures for identifying, compiling, and screening publicly available information supporting TSCA risk evaluation for tetrachloroethylene (PERC). The literature searches were conducted by EPA<sup>1</sup> and contractor<sup>2</sup> staff for the following seven broad topic areas:

1. Physical/chemical properties (hereafter "pchem properties"),
2. Conditions of use of PERC, including known, intended, and reasonably foreseen industrial, commercial, and consumer uses,
3. Fate and transport in the environment (hereafter "fate"),
4. Chemical engineering, occupational exposure and environmental releases (hereafter "engineering"),
5. General population, consumer, and ecological exposure (hereafter "exposure"),
6. Human health hazard identification and dose-response (hereafter "human health hazard"), and
7. Environmental hazard identification and concentration-response (hereafter "environmental hazard")

The following steps were generally conducted, with the exception of topic areas #1, 2 and 7:

1. Define the specific objectives of the literature search as part of the overall systematic review
2. Develop specific search strategies and execute search
3. Develop inclusion/exclusion criteria to determine which search results are "on-topic" versus "off-topic"
4. Develop topic-specific categories (or tags) to further categorize the search results
5. Screen literature search results
6. Validate the search strategy and tagging procedure (ongoing)

EPA<sup>1</sup> and contractors<sup>2</sup> worked simultaneously to conduct the literature searches and leveraged existing information, wherever possible, to facilitate the data gathering effort supporting the risk evaluation. The current process included the following:

- EPA/OPPT chemists conducted the literature searches for pchem properties (topic area #1, Section **Error! Reference source not found.**) using an approach similar to the one used in the TSCA New Chemicals Program, but not the steps described above. When applicable, the chemists relied on literature already gathered in previous EPA/OPPT assessments to support the characterization of pchem properties.

---

<sup>1</sup> EPA staff supported the literature searches for topic areas 1 and 2.

<sup>2</sup> ICF supported the literature searches for topic areas 3 to 6. ERG supported supplemental searches under topic area #4 to develop the life cycle diagrams. CSRA supported the literature search for ecological data under topic area #7.

- EPA/OPPT staff consulted a variety of sources to identify conditions of use (topic area #2) and to develop the *Preliminary Information on Manufacturing, Processing, Distribution, Use and Disposal for Tetrachloroethylene (perchloroethylene)* (hereafter “public use documents”)<sup>3</sup>. Though the strategy did not include all the steps described above, EPA/OPPT included information reported to EPA, literature searches, trade publications, and reports developed for prior EPA and international assessments. These public use documents were used to elicit public feedback on conditions of use of the priority chemicals during and following a public meeting on February 14, 2017. Relevant public input was incorporated into this chemical’s scope document.
- Searches for the fate, exposure, engineering and human health literature (topic areas #3 to 6) were conducted to (1) support the development of the initial life cycle and conceptual model diagrams, and (2) broadly capture information that would be necessary for preparing the environmental and occupational exposure and risk assessments<sup>4</sup>. These searches followed the steps described above.
- EPA/OPPT searched and screened the ecological literature following well accepted methods, approaches and procedures established for the ECOTOX knowledge base and used in EPA’s ecological risk assessments<sup>5</sup> (topic area #7). In general, the process was similar to the one outlined above.

Subsequent sections describe the steps undertaken for each of these topic areas, with additional detail provided in the Appendices. Since the strategies for topic areas 3, 4, 5 and 6 (i.e., fate, engineering, exposure, and human health hazard) are similar, their strategies are in the same section.

The results of the initial search based on title and abstract screening can be found in the *“Tetrachloroethylene (Perchloroethylene) (CASRN: 127-18-4) Bibliography: Supplemental File for the TSCA Scope Document”*. EPA/OPPT is currently evaluating the performance of the search and screening strategy (step 6) prior to commencing full-text screening. The literature search strategy may be refined and updated as the assessment progresses. Also, EPA/OPPT anticipates refinements to the literature search and screening strategy across chemicals to optimize the process for future chemicals.

## **2 Step 1: Define Specific Objectives for the Searches**

---

The information needs for each topic area were developed to translate the broad regulatory mandate of TSCA into questions that could be clearly addressed with the literature search. Table 2-1 Table 2-1 provides a broad overview of the information needs for each topic area. A

<sup>3</sup> Initial compilation of data and/or information reported in the *Preliminary Information on Manufacturing, Processing, Distribution, Use and Disposal for Tetrachloroethylene (perchloroethylene)* released as part of the background materials for the public meeting on risk evaluation scoping efforts under TSCA for 10 chemical substances (February 14, 2017; <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/public-meeting-risk-evaluation-scoping-efforts-under-0>).

<sup>4</sup> Topic areas #2 and #4 complement each other.

<sup>5</sup> ECOTOX database: <https://cfpub.epa.gov/ecotox/>. EPA’s Office of Pesticides (OPP) and the Office of Research and Development (ORD) frequently use ECOTOX for ecological risk assessments.

full list of information needs is provided in Appendix A for most of the topic areas. Note that general information needs for pchem properties, information on conditions of use and environmental hazard are in Table 2-1, but not in Appendix A. The ECOTOX standard operating procedures (SOPs) provide details about the information needs driving the ecological literature searches<sup>6</sup>.

**Table 2-1. Overview of Literature Search for Tetrachloroethylene (PERC) across All Topic Areas**

Discipline	Information needs
Physical/Chemical Properties	<ul style="list-style-type: none"> <li>Collection of pchem properties to inform the fate, exposure and hazard assessments of the risk evaluation</li> </ul>
Conditions of Use <sup>1</sup>	<ul style="list-style-type: none"> <li>Known, intended, and reasonably foreseen conditions of use, including manufacturing, processing, distribution, industrial, commercial and consumer uses, and disposal</li> </ul>
Fate	<ul style="list-style-type: none"> <li>Environmental mobility</li> <li>Environmental degradation</li> <li>Bioaccumulation and environmental persistence</li> <li>Wastewater removal processes</li> </ul>
Engineering	<ul style="list-style-type: none"> <li>Lifecycle and process related information</li> <li>Environmental releases</li> <li>Occupational exposure</li> </ul>
Exposure	<ul style="list-style-type: none"> <li>Lifecycle information to inform general population and consumer exposures</li> <li>Media concentrations in the environment</li> <li>Biomonitoring data</li> <li>Information to identify potentially exposed and susceptible subpopulations</li> </ul>
Human Health Hazard	<ul style="list-style-type: none"> <li>Information about health hazards including critical health effects and corresponding points of departure, associated with exposure via all routes, durations, sources, and pathways</li> <li>Characterization of exposure for general and potentially exposed and susceptible subpopulations</li> <li>Toxicokinetics</li> <li>Mode of action (MOA)</li> <li>Information to identify potentially exposed and susceptible subpopulations<sup>2</sup></li> </ul>
Environmental Hazard	<ul style="list-style-type: none"> <li>Information about environmental hazards associated with acute and chronic toxic effects on aquatic and terrestrial species</li> </ul>

Notes:

1. The initial literature search and compilation of data and/or information are in the *Preliminary Information on Manufacturing, Processing, Distribution, Use and Disposal for Tetrachloroethylene (PERC)* released to the public in February 2017 as part of the background materials for the public meeting on risk evaluation scoping efforts under TSCA for 10 chemical substances (February 14, 2017; Docket ID EPA-HQ-OPPT-2016-0732 at regulations.gov and also at <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/public-meeting-risk-evaluation-scoping-efforts-under-0>). Also, EPA's "Use and Market Profile for Tetrachloroethylene (PERC)" contains data and/or information on conditions of use in the scope document (EPA, 2017b).
2. Literature search for identifying potentially exposed and susceptible subpopulations was designed to be broad to capture information about possible susceptible subpopulations such as infants, children, pregnant women, and elderly.

<sup>6</sup> ECOTOX and related SOPs (<https://cfpub.epa.gov/ecotox/help.cfm?helptabs=tab4>)

### 3 Step 2: Develop Search Strategies

EPA/OPPT considered different categories of data sources when developing the search strategies:

1. Existing problem formulations, draft or final assessments completed by U.S. government agencies (e.g., EPA IRIS assessments<sup>7</sup>),
2. Databases containing peer-reviewed literature (e.g., PubMed, Web of Science),
3. Gray literature, which is defined as the broad category of studies not found in standard, peer-reviewed literature databases (e.g., PubMed). Gray literature includes studies that are difficult to find in conventional bibliographic databases, such as white papers, conference proceedings, technical reports, reference books, dissertations, and information on various stakeholder websites.

Table 3-1 provides an overview of the search strategies for PERC. Additional details, including full lists of search terms and sources, are provided in Appendix B (peer reviewed literature) and Appendix C (gray literature).

**Table 3-1. Overview of Search Strategies for Tetrachloroethylene (PERC) by Topic Area and Source Type**

Discipline	Use of Existing Assessments <sup>1</sup>	Peer-Reviewed Literature Database Search Strategies	Gray Literature Search Strategies
Physical/Chemical Properties	See footnote 1	<b>Databases:</b> public databases that redirect to primary sources; see “Search Strategies for Physical/Chemical Properties” section <b>Date limit:</b> none <b>Key Words:</b> CAS Registry Number (CASRN), chemical name, and chemical structure	<b>Sources:</b> public databases; see “Search Strategies for Physical/Chemical Properties” section <b>Date limit:</b> none <b>Key words:</b> CAS Registry Number (CASRN), chemical name, and chemical structure

<sup>7</sup> Integrated Risk Information System (IRIS), <https://www.epa.gov/iris>

	through August 2011	<b>Key Words:</b> See Appendix A	
Environmental Hazard	None	<b>Databases:</b> Science Direct, Agricola, Toxline, Scifinder, Proquest. Refer to ECOTOX SOP <sup>2</sup> <b>Date limit:</b> none; search conducted January 13, 2017 <b>Key Words:</b> See Appendix D	<b>Sources:</b> Curated list of resources, see Appendix D. <b>Date limit:</b> none; search conducted January 13, 2017 <b>Key words:</b> Varies by source; see Appendix D

**Notes:**

<sup>1</sup> In general, EPA/OPPT existing chemical assessments, EPA's IRIS assessments and ATSDR Toxicological Profiles were used if available. EPA/OPPT assessments may include draft or final TSCA Work Plan risk assessments and final problem formulations. When available, the EPA/OPPT assessments were used to identify pertinent references supporting pchem properties, fate, use, exposure and hazard information. A draft ATSDR Toxicological Profile has been developed for tetrachloroethylene. An IRIS assessment has also been developed. EPA/OPPT obtained the search strategy and search results from the IRIS program and listed the identified literature as relevant for the TSCA risk evaluation.

<sup>2</sup> *ECOTOX Literature Searches, Citation Identification and Skimming*"

(<https://cfpub.epa.gov/ecotox/blackbox/help/ECOTOXLiteratureSearchesCitationIdentificationandSkimming.pdf>)

### 3.1 Search Strategies for Physical/Chemical Properties

The general approach for determining pchem properties is to first search for the specific substance in question (using CAS Registry Number (CASRN), chemical name, or the chemical structure) by following an organized path of literature and database sources, starting with public databases such as STN and REAXYS online, which links directly to the primary references. Additional searches may be conducted using resources such as ChemSpider, which provides both measured and predicted values, with limited primary references. If the exact substance cannot be found, then close structural analogs may be located and their property values extrapolated to the substance in question, or by computer estimation programs. All estimated values as well as measured ones are critically reviewed and deemed reasonable based on professional judgement. Values that are sought, as a minimum, for any physical/chemical pchem property search include: the physical state of the substance at ambient temperature (gaseous, liquid, or solid), melting point (MP) for solids, normal boiling point (BP) at 760 mmHg for liquids, vapor pressure (ideally at 25 °C), solubility in water (ideally at 25 °C) and octanol/water partition coefficient (log Kow).

### 3.2 Search Strategies for Conditions of Use

EPA/OPPT conducted internet searches between December 2016 and January 2017 to identify the conditions of use of PERC, using CAS numbers, chemical names, synonyms, trade names, and common misspellings. Various sources were searched including, but not limited to, information reported to EPA (e.g., Chemical Data Reporting<sup>8</sup> and the Toxics Release Inventory<sup>9</sup>), trade publications, reports in the open literature, or citations in EPA and international assessments<sup>10</sup>. To identify formulated products, EPA searched for safety data sheets (SDS) using internet searches, EPA's Chemical and Product Categories (CPCat) data, the National Institute for Health's (NIH) Household Product Database, and other resources in which a SDS could be found. Each SDS was then cross-checked with company websites to make sure that each product SDS was current. The list of products was crosschecked with public data, publicly

<sup>8</sup> Chemical Data Reporting (CDR) under TSCA: <https://www.epa.gov/chemical-data-reporting>

<sup>9</sup> Toxics Release Inventory (TRI) Program: <https://www.epa.gov/toxics-release-inventory-tri-program>

<sup>10</sup> e.g., EPA/OPPT TSCA Work Plan assessments, <https://www.epa.gov/assessing-and-managing-chemicals-under-tsc/a/assessments-tsc-a-work-plan-chemicals>

available literature, and trade publications to find known uses of PERC. SDS dated prior to 2000 were excluded if additional sources supporting their accuracy could not be located.

The full list of data sources for conditions of use information can be found in the public use document for PERC released as background material for the public meeting on February 14, 2017 (<https://www.regulations.gov/docket?D=EPA-HQ-OPPT-2016-0732>). EPA/OPPT also communicated with companies and industry groups to make sure the list of uses was correct, complete, and up-to-date. EPA/OPPT integrated into the scope document for this chemical relevant public input submitted to the docket for the public meeting (EPA-HQ-OPPT-2017-0002) and for this chemical, (EPA-HQ-OPPT-2016-0732), as well as information from other engagements with stakeholders. Summaries of the public engagement are in this chemical's docket (EPA-HQ-OPPT-2016-0732).

### **3.3 Search Strategies for Fate, Engineering, Exposure/Occupational Exposure, and Human Health Hazard**

---

A broad search and a targeted search were conducted. The fate, engineering, exposure, and human health hazard topic areas were searched broadly to capture data and/or information that would be necessary for preparing the environmental and occupational exposure assessments. For the scope documents, a second targeted search was conducted to locate information needed to create the lifecycle diagrams and conceptual models. The first three sections below discuss the broad search, while the fourth describes the targeted lifecycle/conceptual model search.

#### **3.3.1 Use of Existing Assessments**

---

Where possible, EPA/OPPT used existing U.S. government assessments or summaries as a starting point for the literature searches when these assessments asked similar literature search questions to the current TSCA assessment.

The 2012 final IRIS Toxicological Review for perchloroethylene was used as the starting point for the human health hazard searches. The literature search for perchloroethylene was conducted using 10 online scientific databases: PubMed, Toxline, Toxic Substances Control Act Test Submissions (TSCATS), Registry of Toxic Effects of Chemical Substances (RTECS), Chemical Carcinogenesis Research Information System (CCRIS), Developmental and Reproductive Toxicology/Environmental Teratology Information Center (DART/ETIC), Hazardous Substances Data Bank (HSDB), Genetic Toxicology Data Bank (GENE-TOX), Chemical abstracts, and Current Contents. Primary, peer-reviewed literature was identified through August 2011. The literature search strategy employed for perchloroethylene was based on the Chemical Abstracts Service Registry Number (CASRN) and at least one common name. Any pertinent scientific information submitted by the public to the IRIS Submission Desk was also considered in the development of this document. Other peer-reviewed information, including health assessments developed by other organizations, review articles, and independent analyses of the health effects data were retrieved and included in the assessment where appropriate. References were also added to the Toxicological Review after the external peer review in response to peer reviewer's comments and for the sake of completeness.

All studies in the HERO<sup>11</sup> page for the final IRIS assessment were evaluated as to whether they were on-topic for human health. A supplemental literature search was conducted to identify new literature published after the IRIS assessment using the search strategy presented in Appendix B. PubMed, Web of Science, and Toxline were searched from January 1, 2011 to March 2, 2017.

### **3.3.2 Peer-Reviewed Literature Database Search Strategies**

---

A professional librarian developed the database search strategies for each topic area by:

- 1) Considering search terms and data sources identified by EPA/OPPT's assessment team,
- 2) Considering strategies used for human health hazard in IRIS documents,
- 3) Incorporating known chemical synonyms for PERC (see Appendix B), and
- 4) Tailoring terms for each database to make use of any additional details or categories available in that database (e.g., MeSH terms for the PubMed search strategy and research areas for the Web of Science search).

Relevant subject headings and text words were crafted into a search strategy that was designed to maximize the sensitivity and specificity of the search results (Appendix B). Because each database has its own search architecture, the resulting search strategy was tailored to account for each database's unique search functionality. The search strategies were executed, and EPA/OPPT is in the process of assessing their performance (see Section 6).

Literature search results were imported into EndNote® reference management software to automatically remove duplicates. Since EndNote may not remove all duplicates, additional duplicates were identified and removed manually by comparing fields (e.g., title, author, year). All of the unique references were then sent to Health & Environmental Research Online (HERO)<sup>12</sup>, where they were assigned a unique HERO ID linked to their citation information.

### **3.3.3 Gray Literature Search Strategies**

---

Automated searches were used to gather information from the gray literature using Google API (application program interface), with custom code to "scrape" (i.e., locate and download) all the targeted PDFs (e.g., NIOSH Health Hazard Evaluations). Some sites required manual searching, including databases and those with internal search functions (see Table Apx\_C-2). The complete list of sites and search methods is in Appendix C.

The following data sources were considered when generating the list of websites/sources to search:

- Lists of sources identified by EPA/OPPT's assessment team,
- U.S. and International Government and Non-Government Organizations (NGOs) websites,
- Chemical/production dictionaries/encyclopedias,
- References used for the searches for conditions of use identified in EPA/OPPT's public use documents,
- State government websites covering environmental quality/management, environmental health/human health, and occupational health and safety,

---

<https://hero.epa.gov/hero/>

<sup>12</sup> EPA/OPPT plans to use the HERO database for the draft risk evaluation, <https://hero.epa.gov/hero/>

- Trade Associations websites of member organizations from the National Association of Manufacturers (<http://www.nam.org/Alliances/CMA/CMA-Member-Organizations/>) and additional trade groups identified by the assessment team (Appendix C). Each trade group website was reviewed to identify data and/or information related to the potential uses of PERC based on the information reported in the public use document. If the industrial sector was likely to engage in use activity identified in the public use document, the sector was included in the list of trade associations.

In general, different search terms were required for the different sources depending on the content structure of the website; all sources and search terms are documented in Appendix C. EPA/OPPT reviewed the list of sources; sites that were initially considered but removed during the search process are also listed in Appendix C. In general, these were sites requiring subscription/membership, sites that provided duplicative information, or sites that were not operational at the time of the search.

The search was performed by going to all URLs in the gray literature sources list and searching for PERC-specific information. The search results were either PDF's or a URL describing the search result. Because each result did not have a pre-made citation that could appear in a bibliography, each search result was assigned as a specific "result ID", and the PDF was named to match that result ID.

### **3.3.4 Initial Lifecycle/Conceptual Model Targeted Search**

Specific sources from the gray literature search were used to inform the initial lifecycle diagram and initial conceptual models; these sources were chosen based on existing SOPs and expert judgment by engineers. The sources searched are denoted in Appendix C with an asterisk. The results of the search are included in the *"Tetrachloroethylene (Perchloroethylene) (CASRN: 127-18-4) Bibliography: Supplemental File for the TSCA Scope Document"*. As with the broad gray literature search, the search was performed by going to the URLs and searching for PERC-specific information. The search results were either PDF's or a URL describing the search result.

## **3.4 Search Strategies for Environmental Hazard**

For the ECOTOX database, the ecological literature was identified through comprehensive and well-documented literature searches using the ECOTOX SOPs<sup>13</sup>. These searches are conducted manually or electronically. Manual searches consist of skimming of reference sections of review or summary articles that are not the primary source of data, and papers that document test method procedures. Electronic searches consist of searching electronic abstracting services such as Science Direct, Agricola, Toxline, Scifinder, and Proquest. Sources and search terms are documented in Appendix D.

## **4 Step 3 and 4: Develop Inclusion/Exclusion Criteria and Tags to Categorize Search Results**

### **4.1 Inclusion/Exclusion Criteria for Physical/Chemical Properties**

Pchem studies were eligible for inclusion if they provided values on the exact substance. If a value for the exact substance could not be found, then a close structural analog was located

---

<sup>13</sup> ECOTOX and related SOPs (<https://cfpub.epa.gov/ecotox/help.cfm?helptabs=tab4>)

and a value was extrapolated to the substance in question. If no primary data or close analog data was available, computer estimation programs were used. All estimated values as well as measured ones are critically reviewed and deemed reasonable based on professional judgement. Studies were excluded from further consideration if they had the following characteristics:

- Lack of reporting data for the pchem property of interest,
- Inadequate reporting of methodology used to measure pchem property,
- Inadequate characterization of the chemical substance of interest, including impurities.

These general criteria were used to identify relevant studies reporting the pchem properties of PERC.

## **4.2 Inclusion/Exclusion Criteria for Conditions of Use**

---

Information from sources available to EPA/OPPT, including information reported to EPA/OPPT, trade publications, internet searches, public comments, stakeholder meetings, and public databases, among others, was eligible for inclusion if it provided data or information on:

- Manufacturing, processing, distribution, use or disposal data or relevant information about this chemical,
- Trends in manufacturing (including import) volumes of this chemical,
- Number and location of sites that manufacture, process, distribute, use, recycle, or dispose of this chemical,
- Functional uses for this chemical,
- Which industry sectors use this chemical,
- What concentrations (weight fraction) of this chemical are used in industrial, commercial, and consumer applications,
- What types of products or articles contain this chemical,
- Methods of distribution, e.g. internet sales,
- What volume of this chemical is used for each type of use,
- Which uses have been discontinued or phased out,
- The likelihood that other chemicals will replace this chemical and the names of the other chemicals,<sup>14</sup>
- The likelihood that this chemical will replace other chemicals with similar functional uses,<sup>14</sup>
- Uses for recycled materials containing this chemical and volume of material recycled,
- Approximate number and description of individuals who can be exposed to this chemical, e.g. industrial workers, commercial workers, high-frequency consumer use, low-frequency consumer use, children,
- The typical setting for uses (e.g. outdoors, indoors, industrial commercial, residential, vehicular).

Data or information not within these characteristics were excluded for further consideration.

---

<sup>14</sup> Information on alternative chemicals sometimes provides useful information for the exposure assessment.

### **4.3 Inclusion/Exclusion Criteria and Tags for Fate, Engineering/Occupational Exposure, Exposure, and Human Health Hazard**

---

Because the searches were designed to be broad, they necessarily returned results that are not on topic for EPA/OPPT's risk evaluations. Based on the information needs identified in Step 1, EPA/OPPT developed specific criteria to determine which references should be tagged as "on-topic" (inclusion criteria) and "off-topic" (exclusion criteria). These were created for each topic area, with gray literature having additional inclusion/exclusion criteria for each source as presented in Section 4.4. The gray literature source-specific criteria are in Appendix C. Specific inclusion/exclusion criteria were not developed for the lifecycle/conceptual model search; the search was conducted by engineers with experience developing lifecycle diagrams and conceptual models, and professional judgment was used to determine which resources were on-topic.

Additional sub-categories (or sub-tags) were also included in the tagging structure to allow for additional categorization by source type (e.g., published peer reviewed article versus government report); data type (a primary data source versus a review article or assessment document); topic area (e.g., tagging general population exposure separately from consumer exposure), and chemical-specific and use-specific data or information. These sub-categories are described in Appendix E and will be used to organize the different streams of evidence during the stages of data evaluation and integration. These steps are not reported in the scope document but will be documented in the draft risk evaluation. Although these sub-categories are discussed in this document, they are not included in the *"Tetrachloroethylene (Perchloroethylene) (CASRN: 127-18-4) Bibliography: Supplemental File for the TSCA Scope Document"* because EPA/OPPT is currently reviewing and refining the results of the categorization, including possible changes to the tagging structure.

### **4.4 Inclusion/Exclusion Criteria for Fate, Engineering/Occupational Exposure, Exposure, and Human Health Hazard Gray Literature**

---

The gray literature includes a diverse set of sources that were searched using either a manual or automated search technique. The following overall inclusion/exclusion criteria were applied to the gray literature in conjunction with judgment based on subject matter expertise. The ecological search results were assessed using different criteria.

#### 1. General Inclusion Criteria for Gray Literature:

- Quantitative data retrieved from database searches
- Documents that contain quantitative information or assessments of the chemical of interest
- White papers, position papers, regulatory lists, and other information that summarizes how a particular government/agency prioritizes or characterizes the chemical of interest
- Data provided to the Agency by chemical companies and other stakeholders that is publicly available,
- Additional links within the website that link to sites within the same domain/agency
- Information about best practices for remediating or limiting exposure to the chemical

## 2. General Exclusion Criteria for Gray Literature:

- Documents not available to the public, including information stored within EPA's firewall that is not accessible on the EPA webpage (e.g., TSCA submissions), Confidential Business Information, and information requiring a paid subscription or membership for access
- Links that were broken at the time of the search
- Public comments (usually those without quantitative data) on documents other than the EPA/OPPT existing chemicals dockets
- High level fact sheets and PowerPoint presentations that primarily translate scientific information for the public
- Case studies (primarily occupational exposure) that do not have quantitative information
- Documents that do not explicitly mention the chemical of interest
- FR notices with no quantitative values
- Documents that describe analytical method development but provide no actual measurements useful for characterizing exposure
- Documents captured in searches of other sources
- Researcher CVs and contact information
- Documents reached via a link on the website that are from other government websites
- Landing pages with links, when those links are also captured by the search
- General lists of resources
- Peer-reviewed articles – peer reviewed literature was assumed to be captured in searches of the databases of peer-reviewed literature.
- Draft or earlier versions of documents previously captured
- Duplicate documents (same exact document found in two different result id's for the same chemical)

These criteria were applied to each gray literature resource, and that application required some judgment. Thus, Table A3.2 in Appendix C provides information specific to that source that indicates how the inclusion and exclusion criteria were interpreted and applied.

## **4.5 Inclusion/Exclusion Criteria and Tags for Environmental Hazard**

---

On-topic (or applicable) ecological studies obtained through the ECOTOX literature search were required to meet specific acceptability criteria. Additionally, rejection criteria were developed and are documented through ECOTOX codes. Specific details concerning the inclusion/exclusion criteria for ecological studies are included in Appendix E.

## **5 Step 5: Screen Search Results**

---

### **5.1 Screening and Tagging for Physical/Chemical Properties**

---

The screening of pchem studies was conducted by an experienced chemist, who applied the inclusion/exclusion criteria when reviewing the title and abstract, and if necessary, the full text, of the studies. Following the identification of relevant studies, the chemist reviewed the quality and acceptability of the studies. The included studies are cited in Section 2.2 and Table 2-1 of

the scope document. No tagging was developed or incorporated for the information on pchem properties.

## **5.2 Screening and Tagging for Conditions of Use**

---

EPA/OPPT screened literature and publicly-available databases, among other sources, to identify information on this chemical's manufacturing, processing, distribution, use, and disposal. Preliminary information was included in the public use document. No tagging was done for this information on conditions of use.

## **5.3 Screening and Tagging for Fate, Engineering/Occupational Exposure, Exposure, and Human Health Hazard**

---

### **5.3.1 Peer-Reviewed Literature Database Search Results**

---

Following the database search, the references were imported into DRAGON<sup>15</sup>, a database system used to manage aspects of the systematic review process, including literature screening, risk of bias evaluation, and data integration for screening and tagging. DRAGON was used to facilitate the title/abstract screening across a large team. DRAGON allows references to be assigned to different individuals for screening, it allows tracking of the status of screening, and it stores all of the screening decisions. DRAGON does not perform any of the screening; all screening is done manually by trained individuals.

The title and abstract of each reference identified by the literature search was reviewed/screened, by a single reviewer, to determine if the study was *on-topic* or *off-topic*. On-topic references were then tagged, or categorized, using the topic area tags. All individuals who conducted the screening were trained and provided instructions and definitions of tags as shown in Appendix D. As part of the training process, a senior-level technical expert in the topic area of interest independently reviewed the appropriateness of the assigned tags for the first batch of studies reviewed by an individual screener and provided feedback to the screener. Necessary revisions or clarifications to the screening/tagging instructions and definitions were made and circulated to all screeners. Senior-level technical experts also provided feedback and guidance on specific references to the individual screeners as needed during the screening and tagging process. At the conclusion of the title and abstract review for all topic areas, all final tags applied to references were exported from DRAGON and then uploaded into the HERO database.

### **5.3.2 Gray Literature Search Results**

---

Screening and tagging for the gray literature was performed using Excel to organize and tag the unique search results. Because these types of references generally do not have titles and abstracts, screening and tagging was done on the full text. For references that were searched using the Google API, up to 100 unique results were retrieved for each URL searched. All 100 were then screened to determine if they were *on-topic* or *off-topic*. For references that had to be searched manually, the screener went to each URL and screened all available information for PERC on that site, preferentially searching by CAS number.

---

<sup>15</sup> EPA/OPPT is in the process of migrating from DRAGON to Distiller for the next steps of the screening process, <https://www.icf.com/solutions-and-apps/dragon-online-tool-systematic-review>

During a pilot phase of the broad search, each screener tagged 10 references, which were independently reviewed by the senior level technical expert. Discrepancies between the screener and the technical expert were discussed generating specific feedback to the screener before he/she continued with tagging. After the pilot phase, the remaining results were reviewed and tagged according to the tagging structure.

A targeted gray literature search was conducted and an experienced engineer screened the search results to support the development of the initial lifecycle diagram/conceptual models.

## **5.4 Screening and Tagging for Environmental Hazard**

---

The ECOTOX inclusion/exclusion criteria were used to identify *on-topic* and *off-topic* ecological studies. Reviewers used codes to record the reasons for including or excluding studies. Additional details about the screening and coding procedures can be found in the document “*ECOTOX Literature Searches, Citation, Identification and Skimming*”, <https://cfpub.epa.gov/ecotox/blackbox/help/ECOTOXLiteratureSearchesCitationIdentificationandSkimming.pdf>

## **6 Step 6. Quality Assessment Procedure for Screening and Tagging**

---

Before proceeding with systematic review and data evaluation, EPA/OPPT will assess the specificity and efficiency of the literature searches. Examples of how EPA/OPPT plans to evaluate the performance of the search strategies include:

- Comparison of the references cited in existing EPA/OPPT TSCA problem formulation and risk assessment documents against those identified by the initial search,
- Comparison of the references cited in the public use documents and supporting the life cycle diagrams against those found by the initial search, and
- Comparison of the references cited in review articles.

EPA/OPPT will also assess the performance of the categorization (or tagging) conducted during the title/abstract screening for both the peer-reviewed and gray literature. As a result, some references may move from the *on-topic* to the *off-topic* category, and vice versa. Additional on-topic references could be identified and targeted supplemental searches may be conducted during the analysis phase (e.g., to locate specific information for exposure modeling).

## APPENDICES

### A. LITERATURE SEARCH INFORMATION NEEDS FOR TETRACHLOROETHYLENE (PERC)

#### A-1 Fate Information Needs

Table\_Apx A-1. Fate Information Needs for Tetrachloroethylene (PERC)

Objectives	Information Needs
All Objectives	Fate and transport related pchem properties (e.g., octanol-water partition coefficient, organic carbon-water partition coefficient, Henry's Law constant), Bioaccumulation and bioconcentration, biodegradation and metabolism, abiotic degradation (e.g., hydrolysis, photolysis, abiotic reduction), Removal processes in wastewater treatment plants, and Environmental mobility

#### A-2 Engineering/Occupational Exposure Information Needs

Table\_Apx A-2. Engineering/Occupational Exposure Information Needs for Tetrachloroethylene (PERC)

Objectives	Information Needs
All Objectives (including both Occupational Exposure and Environmental Releases)	Description of the life cycle of the chemical(s) of interest, from manufacture to end-of-life (e.g., each manufacturing, processing, or use step), and material flow between the industrial and commercial life cycle stages. The total annual US volume (lb/yr or kg/yr) of the chemical(s) of interest manufactured, imported, processed, and used; and the share of total annual manufacturing and import volume that is processed or used in each life cycle step. Description of processes, equipment, unit operations, and material flows and frequencies (lb/site-day or kg/site-day and days/yr; lb/site-batch and batches/yr) of the chemical(s) of interest during each industrial/ commercial life cycle step. Note: if available, include weight fractions of the chemicals (s) of interest and material flows of all associated primary chemicals (especially water). Basic chemical properties relevant for assessing exposures and releases, e.g., molecular weight, normal boiling point, melting point, physical forms, and room temperature vapor pressure. Number of sites that manufacture, process, or use the chemical(s) of interest for each industrial/ commercial life cycle step and site locations.
Occupational Exposures	Description of worker activities with exposure potential during the manufacture, processing, or use of the chemical(s) of interest in each industrial/commercial life cycle stage. Potential routes of exposure (e.g., inhalation, dermal). Physical form of the chemical(s) of interest for each exposure route (e.g., liquid, vapor, mist) and activity. Breathing zone (personal sample) measurements of occupational exposures to the chemical(s) of interest, measured as time-weighted averages (TWAs), short-term exposures, or peak exposures in each occupational life cycle stage (or in a workplace scenario similar to an occupational life cycle stage).

	<p>Area or stationary measurements of airborne concentrations of the chemical(s) of interest in each occupational setting and life cycle stage (or in a workplace scenario similar to the life cycle stage of interest).</p> <p>For solids, bulk and dust particle size characterization data.</p> <p>Dermal exposure data.</p> <p>Information needs associated with mathematical modeling (will be determined on a case-by-case basis).</p> <p>Exposure duration.</p> <p>Exposure frequency.</p> <p>Number of workers who potentially handle or have exposure to the chemical(s) of interest in each occupational life cycle stage.</p> <p>Personal protective equipment (PPE) types employed by the industries within scope.</p> <p>Engineering controls employed to reduce occupational exposures in each occupational life cycle stage (or in a workplace scenario similar to the life cycle stage of interest), and associated data or estimates of exposure reductions</p>
Environmental Releases	<p>Description of sources of potential environmental releases, including cleaning of residues from process equipment and transport containers, involved during the manufacture, processing, or use of the chemical(s) of interest in each life cycle stage.</p> <p>Estimated mass (lb or kg) of the chemical(s) of interest released from industrial and commercial sites to each environmental medium (air, water, land) and treatment and disposal methods (publicly owned treatment works (POTW), incineration, landfill), including:</p> <ul style="list-style-type: none"> <li>○ Releases per site and aggregated over all sites;</li> <li>○ Annual release rates;</li> <li>○ Daily release rates;</li> <li>○ Release or emission factors; and</li> <li>○ Number of release days per year.</li> </ul> <p>Information needs associated with mathematical modeling (will be determined on a case-by-case basis).</p> <p>Waste treatment methods and pollution control devices employed by the industries within scope and associated data on release/emission reductions.</p>

### A-3 Exposure Information Needs

**Table\_Apx A-3. Exposure Information Needs for Tetrachloroethylene (PERC)**

Objectives	Information Needs
Lifecycle, general population, and consumer exposures	<p>What products contain this chemical?</p> <p>What articles contain this chemical?</p> <p>How are products/articles typically disposed of?</p> <p>What are the use patterns/frequencies for different age groups for the products/articles?</p> <p>Are there existing assessments (including modeled data) looking at exposure to the general population?</p> <p>Are there existing assessments (including modeled data) looking at exposure to consumers?</p> <p>What specific activities have the potential for consumer exposures to chemicals?</p> <p>What are the likely routes of exposure?</p> <p>What are the number of consumers potentially exposed?</p> <p>Are any modeled exposures available?</p>
Presence in the environment/ Biomonitoring data	<p>Is there monitoring data for the concentration of this chemical in:</p> <ul style="list-style-type: none"> <li>○ Foods, either individually or as a "market basket"</li> <li>○ Drinking water in the United States, either from well water or public drinking water sources</li> </ul>

	<ul style="list-style-type: none"> <li>○ Ambient Air</li> <li>○ Indoor Air</li> <li>○ Indoor Dust</li> <li>○ Soil</li> <li>○ Wastewater/sludge</li> <li>○ Sediment</li> <li>○ Plant life/crops/biota</li> <li>○ Terrestrial Wildlife/livestock/fish/ aquatic wildlife</li> <li>○ Blood (for US populations)</li> <li>○ Urine (for US populations)</li> <li>○ Cord blood (for US populations)</li> <li>○ Human tissues (for US populations)</li> </ul>
Environmental Releases	<p>Are there documented populations near manufacturing facilities or in other hot spots receiving higher-than-average exposure?</p> <p>Is there chemical-specific emission rate data for the products/articles containing the chemical?</p>

## A-4 Human Health Information Needs

**Table\_Apx A-4. Human Health Information Needs for Tetrachloroethylene (PERC)**

Objectives	Information Needs
Overall Objectives	<ul style="list-style-type: none"> <li>● Identify and document all health hazards associated with exposure to the chemical via all relevant routes, durations and sources/pathways of exposure, using hazard data from: <ul style="list-style-type: none"> <li>○ Animal and human (epidemiological and experimental) studies</li> <li>○ Acute/immediate effects, delayed acute effects, chronic/long-term effects</li> </ul> </li> <li>● Identify critical health effect(s) such as acute effects, low-dose effects and/or severe effects (e.g., cancer, non-cancer target organ effects, reproductive/developmental effects) <ul style="list-style-type: none"> <li>○ Identify key studies for critical effect(s)</li> <li>○ Identify dose (or concentration)-response data</li> </ul> </li> <li>● Identify points of departures (PODs) for critical effect(s) for each relevant exposure route (e.g., inhalation, oral, dermal) and exposure duration (e.g., acute, sub chronic and chronic)</li> </ul>
Toxicokinetics	<ul style="list-style-type: none"> <li>● Identify toxicokinetic data, i.e. on absorption, distribution, metabolism, excretion (ADME): <ul style="list-style-type: none"> <li>○ Animal and human studies</li> <li>○ <i>In vitro</i> studies</li> <li>○ Modelled ADME data</li> <li>○ Physiologically-based pharmacokinetic (PBPK) models</li> </ul> </li> </ul>
Mode of Action (MOA)	<ul style="list-style-type: none"> <li>● Identify studies that support a MOA for critical effects e.g., for threshold or non-threshold cancer and non-cancer effects from:</li> </ul>

	<ul style="list-style-type: none"> <li>○ <i>In vitro</i> mechanistic studies</li> <li>○ Genotoxicity studies</li> <li>○ <i>In vivo</i> mechanistic studies</li> <li>○ Experimental studies in humans</li> <li>○ Studies that link exposure to a carcinogenic effect</li> </ul>
Occupational Exposures	<ul style="list-style-type: none"> <li>● Characterization of health effects associated with occupational exposures: <ul style="list-style-type: none"> <li>○ Health effects associated with various exposure routes and/or physical forms of the chemical</li> <li>○ For solid dusts – differences in health effects associated with particle size fraction</li> </ul> </li> </ul>
Potentially Exposed and Susceptible Subpopulations	<ul style="list-style-type: none"> <li>● Characterization of factors that may make humans more vulnerable to develop adverse effects</li> </ul>

## B. DATABASE (PEER-REVIEWED) LITERATURE SEARCHES FOR FATE, ENGINEERING/OCCUPATIONAL EXPOSURE, EXPOSURE, AND HUMAN HEALTH HAZARD

---

### B-1 Tetrachloroethylene (PERC) Synonyms

---

These are the synonyms of PERC that were considered during the development of the database searches for fate, engineering, exposure and human health hazard information.

- Tetrachloroethylene
- 127-18-4
- PCE
- C<sub>2</sub>Cl<sub>4</sub>
- Ethene, 1,1,2,2-tetrachloro- (CAS name)
- 1,1,2,2-Tetrachloroethene
- Ethen, tetrachloro-
- Ethylene, tetrachloro-
- AI3-01860
- Ankilostin
- Antisal 1
- Asahi Perchlor
- Carbon bichloride
- Carbon dichloride
- Caswell no. 827
- Czterochloroetylen (Polish)
- Didakene
- Dilatin PT
- Dow-Per
- ENT 1,860
- EPA pesticide chemical code 078501
- Ethylene tetrachloride
- F 1110
- Fedal-Un
- Freon 1110
- LXGL 15
- NCI-C04580
- Nema
- NSC 9777
- PCE
- PER
- Perawin
- PERC
- Perchloorethyleen, Per (Dutch)
- Perchlor
- Perchloraethylen, Per (German)
- Perchlorethylene
- Perchloroethene
- Perchloroethylene
- Perclene
- Percloroetilene (Italian)

- Percosolve
- Perk
- Perklone
- Persa P3
- PerSec
- R 1110
- Tetlen
- Tetracap
- Tetra-chlooretheen  
(Dutch)
- Tetrachloraethen  
(German)
- Tetrachlorethylene
- Tetrachloroethene
- Tetrachloroethylene
- Tetracloroetene  
(Italian)
- Tetracloroetileno  
(Spanish)
- Tetraguer
- Tetraleno
- Tetralex
- Tetravec
- Tetroguer
- Tetropil

## C. GRAY LITERATURE SEARCHES FOR FATE, ENGINEERING/OCCUPATIONAL EXPOSURE, EXPOSURE, AND HUMAN HEALTH HAZARD

---

The gray literature search for fate, engineering, exposure, and human health hazard was done with a goal of efficiency. For this reason, websites were automatically searched wherever possible. After creating the list of sites to search, three categories of websites were identified that required a different search strategy as explained below.

- *Websites that can be effectively searched using Google:* these websites and corresponding subsites have relevant documents that can be searched using Google. EPA/OPPT used Google's API that allows the user to create custom searches restricted by both keyword list and URL list. This approach greatly increased the speed of the searches, since code was written to implement the searches automatically. The following key restrictions, however, were encountered during the search:
  - The API returns the first 100 sites found, after sorting for predicted relevancy. As with all Google searches, Google attempts to rank the returned URLs in terms of overall relevancy to the search terms. However, if 3,600 sites are returned by the search, only the first 100 according to Google's ranked order are returned. The search strings in Google and the Google API are restricted to 128 characters. For PERC, the following search string was created to have the maximum number of chemical synonyms/CAS numbers without exceeding 128 characters: "127-18-4" OR "Tetrachloroethylene" OR "PERC" OR "Perchloroethylene" OR "Tetrachloroethene"
- *Websites that can be searched using custom code but not using Google:* these websites have relevant data and/or information in the form of PDFs and the searches can be automated by developing custom code that locates and downloads (i.e., "scrapes") all of the targeted PDFs.
  - ATSDR and NIOSH documents: ATSDR has a series of Public Health Assessments and Health Consultations, and NIOSH has a series of Human Hazard Evaluations that may have documents relevant for the TSCA risk evaluation. Each document is housed at specific URLs within the ATSDR and NIOSH websites. Python code was used to automatically download 100 documents from each site.
  - EPA National Electronic Publications Information System (NEPIS) website: The EPA NEPIS website was another one that used custom code to search. NEPIS houses EPA reports and documents that can be searched by keyword. The NEPIS site uses its own search engine that is not retrievable using Google. Thus, python code was developed to directly access the website search engine and automatically pull the top 100 returned PDFs.
- *Websites that are searched manually:* a manual search is required because the websites house a database or they use their own search engine to retrieve information (e.g., ChemView, NHANES).

The overall strategy for searching these sites is shown in Table\_Apx C-1. The lists of sites that were searched (with site-specific inclusion/exclusion criteria) are provided in Table\_Apx C-2 and Table\_Apx C-3. The sites that were originally on the list but removed during curation are provided in Table\_Apx C-4.

**Table\_Apx C-1. Overview of Search Strategy for Gray Literature for Fate, Engineering/Occupational Exposure, Exposure, and Human Health Hazard Topic Areas**

Search Type	How was List Created?	Sub Search Type	How Was Source Searched?	Search Terms	Date Limit	Literature Search Notes
US Government and International Websites	Compiling list of sources, sources cited in existing problem formulation and assessment documents, and sources cited in the public use document	Manual (sites that cannot be searched using Google)	Searched manually	"127-18-4" OR "Tetrachloroethylene" OR "PERC" OR "Perchloroethylene"	None	<ul style="list-style-type: none"> <li>Searched all sites and subsites using the perchloroethylene CAS number (127-18-4) or the substance name (tetrachloroethylene or PERC or perchloroethylene)</li> <li>Pulled the most recent draft (either draft or final) for assessments.</li> </ul>
		Automated, Google API	Searched using Google API	"127-18-4" OR "Tetrachloroethylene" OR "PERC" OR "Perchloroethylene" OR "Tetrachloroethene"	None	<ul style="list-style-type: none"> <li>Search string is 91 characters (below the 128 character limit)</li> <li>Google's API returns the top 100 hits from each site</li> </ul>
		Automated, EPA NEPIS	Searched using code that pulls 100 subsites/pdfs	Search 1: "perchloroethylene" Search 2: "tetrachloroethylene"	1991	<ul style="list-style-type: none"> <li>The NEPIS database is a warehouse for EPA documents and reports, and it is not accessible by Google. ICF wrote a custom search for that website.</li> <li>The site is searchable by keyword only, so two searches were done using both common synonyms (perchloroethylene or tetrachloroethylene)</li> <li>The database was searched using a date limit of 1991 to prioritize the 100 most recent EPA documents.</li> </ul>
		Automated, ATSDR and NIOSH	Searched using code that pulls 100 subsites/pdfs	"Perchloroethylene"	None	<ul style="list-style-type: none"> <li>Both sources contain a large number of assessments on specific subsites</li> <li>Up to 100 documents were downloaded for each chemical</li> </ul>
Trade Association Websites	Using National Association of Manufacturers members list and public use document	Google API	Searched using Google API	"127-18-4" OR "Tetrachloroethylene" OR "PERC" OR "Perchloroethylene" OR "Tetrachloroethene"	None	<ul style="list-style-type: none"> <li>Search string is 91 characters (below the 128 character limit)</li> <li>Google's API returns the top 100 hits from each site</li> </ul>
State Websites	Searching for environ. quality/ management, environ. health/human health, and occupational health and safety subsites	Google API	Searched using Google API	("127-18-4" OR "Tetrachloroethylene" OR "PERC" OR "Perchloroethylene" OR "Tetrachloroethene") AND (assessment OR data)	None	<ul style="list-style-type: none"> <li>State sites tended to have a lot of regulatory or outreach documents which are expected to be less on-topic</li> <li>To focus on reports, assessments, and data, the search string was modified to include the words "data" and "assessment"</li> </ul>

**Table\_Apx C-2. Sources Used For Gray Literature Search for Fate, Engineering/Occupational Exposure, Exposure, and Human Health Hazard Topic Areas with Source-Specific Inclusion/Exclusion Criteria**

ID	Trusted Source Category	Source	Source Address	Manual or Automated	Search by?	Search Terms <sup>1</sup>	Source-Specific Inclusion Criteria	Source-Specific Exclusion Criteria
1001	US EPA Resources	Office of Water: EPA Water Regulations*	<a href="https://www.epa.gov/regulatory-information-topic/regulatory-information-topic-water">https://www.epa.gov/regulatory-information-topic/regulatory-information-topic-water</a>	Manual	Chemical	CAS or chemical name	Drinking water regulations under development or currently in place	None
1006	US EPA Resources	Drinking Water Standards and Health Advisories	<a href="https://www.epa.gov/sites/production/files/2015-09/documents/dwstandards2012.pdf">https://www.epa.gov/sites/production/files/2015-09/documents/dwstandards2012.pdf</a>	Manual	Chemical	CAS or chemical name	All chemicals covered by the 2012 standards	None
1008	US EPA Resources	Office of Water: STORET and WQX	<a href="https://www.epa.gov/waterdata/storage-and-retrieval-and-water-quality-exchange">https://www.epa.gov/waterdata/storage-and-retrieval-and-water-quality-exchange</a>	Manual	Chemical	CAS or chemical name	The database was downloaded and text files with data specific to included chemicals (metadata and results) were saved in zip files. The website states that the data warehouse includes all data supplied to EPA since 1999.	None
1010	US EPA Resources	Office of Air Quality Planning and Standards (OAQPS)	<a href="http://epa.gov/airquality/">epa.gov/airquality/</a>	Automated	Chemical	Google API terms	Documents containing information about control technologies used to control emissions	FR notices not directly pertaining to chemical of interest; broken links
1011	US EPA Resources	Office of Air: Air Emission Factors*	<a href="https://www.epa.gov/air-emissions-factors-and-quantification/app-42-Compilation-air-emission-factors">https://www.epa.gov/air-emissions-factors-and-quantification/app-42-Compilation-air-emission-factors</a>	Manual	Industrial Sector	Sectors and uses identified from public use document and Chemical Data Reporting data	Reviewed chapters to identify information relevant to industrial sectors using professional experience/judgment	None
1012	US EPA Resources	Office of Air: Emission Inventory Improvement Program	<a href="https://www.epa.gov/air-emissions-inventories/emission-inventory-">https://www.epa.gov/air-emissions-inventories/emission-inventory-</a>	Manual	NAICS Code	NAICS Code	This source will be searched once the assessment team determines the list of NAICS codes to search the database likely during problem formulation.	

			<a href="#">improvement-program-eiip</a>					
1013	US EPA Resources	Office of Air: National Emissions Inventory (NEI)	<a href="https://www.epa.gov/air-emissions-inventories/national-emissions-inventory">https://www.epa.gov/air-emissions-inventories/national-emissions-inventory</a>	Manual	NAICS Code	NAICS Code	This source will be searched once the assessment team determines the list of NAICS codes to search the database likely during problem formulation.	
1014	US EPA Resources	Office of Air: Ambient Water Quality Criteria documents	<a href="http://epa.gov/wqc">epa.gov/wqc</a>	Automated	Chemical	Google API terms	Most-recent water quality criteria human health tables and supporting documents	Previous (prior to 2015) water quality criteria documents; documents not directly pertaining to the chemical of interest

1016	US EPA Resources	Office of Air: NESHAP*	<a href="http://epa.gov/technical-air-pollution-resources">epa.gov/technical-air-pollution-resources</a>	Automated	Chemical	Google API terms	No results returned by search	No results returned by search
1031	US EPA Resources	Office of Air: Urban Air Toxics	<a href="https://www.epa.gov/urban-air-toxics/urban-air-toxic-pollutants">https://www.epa.gov/urban-air-toxics/urban-air-toxic-pollutants</a>	Manual	Chemical	CAS or chemical name	List of chemicals classified as urban air toxics	None
1032	US EPA Resources	OPPT: TRI, including TRI Guidance Documents*	<a href="http://epa.gov/tri">epa.gov/tri</a>	Automated	Chemical	Google API terms	Statistics on emission reductions. Additional data supporting the lifecycle diagram/conceptual model was reviewed using professional judgment/experience.	Fact sheets, reporting forms, grant program information, data (data is provided in a different source)
1038	US EPA Resources	OPPT: TSCA Analog Identification Methodology (AIM)	<a href="http://www.epa.gov/tscascreening-tools/analog-identification-methodology-aim-tool">http://www.epa.gov/tscascreening-tools/analog-identification-methodology-aim-tool</a>	Manual	Chemical	CAS or chemical name	The AIM tool was downloaded and searched to find records for PERC	None
1059	US EPA Resources	Significant New Alternatives Policy (SNAP)	<a href="http://epa.gov/snap">epa.gov/snap</a>	Automated	Chemical	Google API terms	None	Lists of substitutes in different use sectors that link to specific FR notices from the 1990's
1061	US EPA Resources	Safer Choice	<a href="http://epa.gov/saferchoice/">epa.gov/saferchoice/</a>	Automated	Chemical	Google API terms	None	Very high-level fact sheets or assessment overviews; assessments found in other sources; staff directories
1064	US EPA Resources	Pollution Prevention	<a href="http://epa.gov/p2/">epa.gov/p2/</a>	Automated	Chemical	Google API terms	None	Very high-level fact sheets and case studies; contact information

1070	US EPA Resources	Pesticide Chemical Search	<a href="https://iaspub.epa.gov/apex/pesticides/f?p=chemicalsearch:1">https://iaspub.epa.gov/apex/pesticides/f?p=chemicalsearch:1</a>	Manual	Chemical	CAS or chemical name	The database was searched by CAS number and all information returned was included in PDFs	Additional links on the search return page (included in other sources)
1073	US EPA Resources	InertFinder	<a href="https://iaspub.epa.gov/apex/pesticides/f?p=101:1:">https://iaspub.epa.gov/apex/pesticides/f?p=101:1:</a>	Manual	Chemical	CAS or chemical name	The database was searched by CAS number and all information returned was included in PDFs	None
1075	US EPA Resources	Pesticide Ingredients	<a href="http://epa.gov/ingredients-used-pesticide-products">epa.gov/ingredients-used-pesticide-products</a>	Automated	Chemical	Google API terms	None	High level summaries supporting decisions about classifying inert ingredients
1078	US EPA Resources	Hazardous Waste	<a href="http://epa.gov/hw/">epa.gov/hw/</a>	Automated	Chemical	Google API terms	Reports to Congress or other material supporting regulatory decisions	Regulatory documents
1080	US EPA Resources	Superfund chemical data matrix	<a href="https://www.epa.gov/superfund/superfund-chemical-data-matrix-scdm-query">https://www.epa.gov/superfund/superfund-chemical-data-matrix-scdm-query</a>	Manual	Chemical	CAS or chemical name	The database was searched by CAS number and all information returned was included in PDFs	None
1081	US EPA Resources	Superfund Enterprise Management System (SEMS)	<a href="http://cumulis.epa.gov/supercpad/cursites">cumulis.epa.gov/supercpad/cursites</a>	Automated	Chemical	Google API terms	Quantitative risk assessments performed for Superfund sites	General Superfund site information that did not include quantitative measures of contaminant or exposure
1083	US EPA Resources	CPCat	<a href="https://actor.epa.gov/cpcat/faces/search.xhtml">https://actor.epa.gov/cpcat/faces/search.xhtml</a>	Manual	Chemical	CAS or chemical name	The database was searched by CAS number and all information returned was included in PDFs	None
1090	US EPA Resources	NCEA IRIS	<a href="http://epa.gov/iris">epa.gov/iris</a>	Automated	Chemical	Google API terms	Supporting information for IRIS assessments	Main IRIS landing pages and information from the IRIS Tracker
1097	US EPA Resources	NCEA IRIS	<a href="https://cfpub.epa.gov/ncea/iris/search/">https://cfpub.epa.gov/ncea/iris/search/</a>	Manual	Chemical	CAS or chemical name	IRIS overview pages, summary pages, and full toxicological profiles	None
1101	US EPA Resources	ChemView (CDR/IUR)*, with links to hazard characterizations, substantial risk reports, chemical reporting data, chemical test rule data, High Production Volume Information System (HPVIS) data, and alternatives assessments.	<a href="http://java.epa.gov/chemview">http://java.epa.gov/chemview</a>	Manual	Chemical	CAS or chemical name	The database was searched by CAS number and all information returned was included in PDFs, other than IRIS assessments that were returned from other sources	None

1103	US EPA Resources	Stationary Sources Air Pollution	<a href="http://epa.gov/stationary-sources-air-pollution/">epa.gov/stationary-sources-air-pollution/</a>	Automated	Chemical	Google API terms	Documents supporting NESHAP that may contain quantitative data	NESHAP rules and FR notices (regulatory only)
1110	US EPA Resources	Economic and cost assessment	<a href="http://epa.gov/economic-and-cost-analysis-air-pollution-regulations">epa.gov/economic-and-cost-analysis-air-pollution-regulations</a>	Automated	Chemical	Google API terms	Documents containing quantitative data	Documents not containing quantitative data
1113	US EPA Resources	NSCEP documents (NEPIS)	<a href="https://nepis.epa.gov/Exe/ZyNET.exe?ZyActionL=Register&amp;User=anonymous&amp;Password=anonymous&amp;Client=EPA&amp;Init=1">https://nepis.epa.gov/Exe/ZyNET.exe?ZyActionL=Register&amp;User=anonymous&amp;Password=anonymous&amp;Client=EPA&amp;Init=1</a>	Automated	Chemical	NEPIS	Documents providing quantitative assessments or data	Fact sheets; documents supporting rules that do not have quantitative data
1118	US EPA Resources	Regulatory Development and Retrospective Review Tracker	<a href="http://yosemite.epa.gov/oepi/rulegate.nsf/">yosemite.epa.gov/oepi/rulegate.nsf/</a>	Automated	Chemical	Google API terms	None	Lists of regulations expected to affect particular interests
1120	US EPA Resources	"List of Lists"	<a href="https://www.epa.gov/sites/production/files/2015-03/documents/list_of_lists.pdf">https://www.epa.gov/sites/production/files/2015-03/documents/list_of_lists.pdf</a>	Manual	Chemical	CAS or chemical name	List of chemicals covered by specific EPA programs	None
1123	US EPA Resources	TSCATS 2.0	<a href="https://yosemite.epa.gov/oppts/epatscat8.nsf/reportsearch?openform">https://yosemite.epa.gov/oppts/epatscat8.nsf/reportsearch?openform</a>	Manual	Chemical	CAS or chemical name	The database was searched and all low detail report results were PDFed	None
1125	US EPA Resources	EPA Manufacturing/Use	Search epa.gov for each manufacturing sector and use and key words for each manufacturing sector	Manual	NAICS Code	NAICS Code	This source will be searched once the assessment team determines the list of NAICS codes to search the database likely during problem formulation.	
1141	US EPA Resources	OECA Sector Notebooks	The Sector Notebooks have been archived. Conduct an internet search	Manual	NAICS Code	NAICS Code	This source will be searched once the assessment team determines the list of NAICS codes to search the database likely during problem formulation.	

			with the keyword "OECA sector notebook" to see whether there has been a Sector Notebook prepared for the relevant industry					
1143	US EPA Resources	EPA Generic Scenarios*	Review the list of currently approved Generic Scenarios for relevant information. The scenarios provide information on process descriptions and guidelines for release and exposure estimates for specific industry sectors.	Manual	Industrial Sector	Sectors and uses identified from public use document and Chemical Data Reporting data	Reviewed the list of currently approved Generic Scenarios for relevant information using professional judgment/experience. The scenarios provide information on process descriptions and guidelines for release and exposure estimates for specific industry sectors.	Information that does not inform the lifecycle diagram or conceptual model.
1144	US EPA Resources	HPV challenge submissions*	<a href="https://cfpub.epa.gov/hpv-s/">cfpub.epa.gov/hpv-s/</a>	Automated	Chemical	Google API terms	Documents providing information relevant to the lifecycle diagrams and conceptual model using professional judgment/experience. Additional quantitative assessments or data were also pulled as part of the broad search.	Broken links
1145	US EPA Resources	OPPT Hazard Characterizations	<a href="https://ofmpub.epa.gov/oppt/hpv/hc/characterization.get_report_by_cas?doctype=2">https://ofmpub.epa.gov/oppt/hpv/hc/characterization.get_report_by_cas?doctype=2</a> [the list of chemicals that have hazard characterizations] with	Manual	Chemical	CAS or chemical name	No results returned by search	No results returned by search

			supplemental search for the hazard characterization documents, which are published at <a href="https://java.epa.gov/chemview">https://java.epa.gov/chemview</a> (source id 1101) <a href="https://ofmpub.epa.gov/oppt/v/hpv_hc_characterization.get_report_by_cas?doctype=2">https://ofmpub.epa.gov/oppt/v/hpv_hc_characterization.get_report_by_cas?doctype=2</a>

5000	Other Resources	Lowell Center for Sustainable Production	<a href="http://sustainableproduction.org">sustainableproduction.org</a>	Automated	Chemical	Google API terms	Documents containing quantitative data or use information; recommendations or overall chemical summaries	Fact sheets; press releases; older versions of current reports (e.g., causes of cancer)
5011	International Resources	eChemPortal	<a href="http://www.echemportal.org/echemportal/index?pageID=0&amp;request_locale=en">http://www.echemportal.org/echemportal/index?pageID=0&amp;request_locale=en</a>	Manual	Chemical	CAS or chemical name	The database was searched by CAS number and the result page PDFed	None
5014	Other Resources	Toxicology Excellence for Risk Assessment	<a href="http://www.tera.org/">http://www.tera.org/</a>	Manual	Chemical	CAS or chemical name	Documents containing quantitative data or recommendations for analysis	Documents not containing quantitative data or recommendations for analysis
5019	Other Resources	Consumer Products Information Database (CPID)	<a href="https://www.wahatsinproducts.com/chemicals/index/1">https://www.wahatsinproducts.com/chemicals/index/1</a>	Manual	Chemical	CAS or chemical name	The database was searched by CAS number and the result page PDFed	None
5020	Other Resources	Pollution Prevention Infohouse	<a href="http://infohouse.p2ric.org/">infohouse.p2ric.org/</a>	Automated	Chemical	Google API terms	Documents containing quantitative data or regulatory lists of chemicals by state	Documents not containing quantitative data or regulatory lists of chemicals by state

5027	Other Resources	Kirk Othmer Encyclopedia*	Book	Manual	Chemical	CAS or chemical name	Searched by chemical name in volume index. Captured all entries pertaining to chemical of interest.	Brief mentions of chemical in entries for other chemicals not included in this search
5028	Other Resources	Ashford's Dictionary of Industrial Chemicals, 2001	Book	Manual	Chemical	CAS or chemical name	Searched by chemical name in index. Captured dictionary entries for chemical of interest.	None
5029	Other Resources	Hawley's Chemical Dictionary, 2016	Book	Manual	Chemical	CAS or chemical name	Searched by chemical name in index. Captured dictionary entries for chemical of interest.	None
6000	States	Custom search engine using States sites (see separate table)	multiple	Automated	Chemical	States	Documents containing quantitative data or regulatory lists of chemicals by state	Documents not containing quantitative data or regulatory lists of chemicals by state, including fact sheets
7141	Trade/ Professional	American Composites Manufacturers Association	<a href="http://www.acmanet.org">www.acmanet.org</a>	Automated	Chemical	Google API terms	Trade association websites were searched by search strings containing CAS number and common chemical synonyms. If a search result was a pdf file it was captured automatically, otherwise a webpage with active links was captured. On-topic documents included industrial processes and uses, production and trade data, court proceedings, regulatory response from industry, and regulatory guidance documents.	Documents such as news releases that do not contain quantitative data beyond general use information. Documents describing analytical processes where chemical was used in apparatus, reagent, or reference material. Documents describing non-current use such as pre 1980 uses of asbestos. Documents describing alternative use compounds to the chemical being searched.

**Table\_Apx C-4. List of Gray Literature Sources Removed from Search during Curation for Fate, Engineering/Occupational Exposure, Exposure, and Human Health Hazard Topic Areas**

Searched ID	Description	URL	Reason
1007	Office of Water Effluent Guidelines	<a href="https://www.epa.gov/eg">https://www.epa.gov/eg</a>	Provides a list of chemicals only
1009	Water Quality Criteria 1986		Outdated
1018	Government Publishing Office (GPO)	<a href="https://www.gpo.gov/">https://www.gpo.gov/</a>	Search this last because most hits will be duplicates
1077	Greener products and services	<a href="https://www.epa.gov/greenerproducts/identify-greener-products-and-services">https://www.epa.gov/greenerproducts/identify-greener-products-and-services</a>	Public fact sheets without sufficient level of detail
1089	ECOTOX Database	<a href="https://cfpub.epa.gov/ecotox/quick_query.htm">https://cfpub.epa.gov/ecotox/quick_query.htm</a>	Removed because ecotox team is covering this reference
1121	US EPA Resources	Fact Sheets	Public fact sheets without sufficient level of detail
1123	EPA Reports	Search epa.gov for each chemical with the key word "report"; only keep those that wouldn't be caught by other sources	Other searches caught this information
1125	EPA Manufacturing/Use	Search epa.gov for each manufacturing sector and use and key words "fact sheet" or "report"	Other searches caught this information
1130	Substance Registry Services (SRS)	<a href="https://iaspub.epa.gov/sor_internet/registry/substreg/searchandretrieve/substancesearch/search.do">https://iaspub.epa.gov/sor_internet/registry/substreg/searchandretrieve/substancesearch/search.do</a>	Site provides links to other trusted sources; was used to ensure no part of SRS was excluded from overall trusted source list
1142	EPA Existing Chemicals Engineering Files	EPA has an archive of hardcopy engineering assessments from previous Existing Chemicals assessments. If directed by the EPA Task Manager, ERG will contact the EPA WA COR to inquire as to the location of these hardcopy files and will review them for relevant information.	This information is internal to OPPT and not public; it may be searched in the future
2023	NTP National Toxicology Program	<a href="http://ntp.niehs.nih.gov/">ntp.niehs.nih.gov/</a>	Too general; refined search strategy to target specific subsites
2024	NTP National Toxicology Program - Search	<a href="http://ntpsearch.niehs.nih.gov/">http://ntpsearch.niehs.nih.gov/</a>	Too general; refined search strategy to target specific subsites
2025	NTP National Toxicology Program - Substances studied by NTP	<a href="https://ntp.niehs.nih.gov/testing/status/agents/ts-11297-e.html">https://ntp.niehs.nih.gov/testing/status/agents/ts-11297-e.html</a>	All NTP studies are captured in Toxline
2033	NTP Genetically Modified Model Report Series	<a href="https://ntp.niehs.nih.gov/testing/types/altmodels/reports/index.html">https://ntp.niehs.nih.gov/testing/types/altmodels/reports/index.html</a>	All NTP studies are captured in Toxline
2034	NTP Technical Report Series	<a href="https://ntp.niehs.nih.gov/results/pubs/longterm/reports/longterm/index.html">https://ntp.niehs.nih.gov/results/pubs/longterm/reports/longterm/index.html</a>	All NTP studies are captured in Toxline
2035	NTP Toxicity Report Series	<a href="https://ntp.niehs.nih.gov/results/pubs/shortterm/reports/index.html">https://ntp.niehs.nih.gov/results/pubs/shortterm/reports/index.html</a>	All NTP studies are captured in Toxline
2036	NTP Developmental Toxicity Study Abstracts	<a href="https://ntp.niehs.nih.gov/testing/types/dev/abstracts/index.html">https://ntp.niehs.nih.gov/testing/types/dev/abstracts/index.html</a>	All NTP studies are captured in Toxline

2037	NTP Immunotoxicity Study Abstracts	<a href="https://ntp.niehs.nih.gov/testing/types/imm/abstracts/index.html">https://ntp.niehs.nih.gov/testing/types/imm/abstracts/index.html</a>	All NTP studies are captured in Toxline
2038	NTP Reproductive Assessment by Continuous Breeding Study Abstracts	<a href="https://ntp.niehs.nih.gov/testing/types/repro/abstracts/index.html">https://ntp.niehs.nih.gov/testing/types/repro/abstracts/index.html</a>	All NTP studies are captured in Toxline
2040	NTP- Chemical Effects in Biological Systems (CEBS) database	<a href="https://tools.niehs.nih.gov/cebs3/ui/">https://tools.niehs.nih.gov/cebs3/ui/</a>	All NTP studies are captured in Toxline
2102	CDC ATSDR Public Health Statements	<a href="https://www.atsdr.cdc.gov/phs/phs.asp?id=953&amp;tid=199">https://www.atsdr.cdc.gov/phs/phs.asp?id=953&amp;tid=199</a>	Already covered by the ATSDR tox profiles in ID 2100
2112	CDC NHANES	<a href="https://www.cdc.gov/nchs/nhanes/">https://www.cdc.gov/nchs/nhanes/</a>	Other searches caught this information
2124	CDC NIOSH	<a href="https://www.cdc.gov/niosh/">https://www.cdc.gov/niosh/</a>	A targeted NIOSH search was done instead
2126	CDC NIOSH Pocket Guide to Chemical Hazards	<a href="https://www.cdc.gov/niosh/npg/search.html">https://www.cdc.gov/niosh/npg/search.html</a>	Already covered under ID 2116 (Pocket guide to chemical hazards)
2201	Bureau of Labor Statistics: American Time Use Survey	<a href="https://www.bls.gov/tus/tables.htm">https://www.bls.gov/tus/tables.htm</a>	Does not provide chemical-specific information and is already incorporated into OPPT generic exposure scenarios
2209	Census Bureau: American Fact Finder Database	<a href="https://factfinder.census.gov/faces/nav/jsf/pages/searchresults.xhtml?refresh=t">https://factfinder.census.gov/faces/nav/jsf/pages/searchresults.xhtml?refresh=t</a>	Does not provide chemical-specific information and is already incorporated into OPPT generic exposure scenarios
2225	Electronic Code of Federal Regulations	<a href="http://www.ecfr.gov/">http://www.ecfr.gov/</a>	This provides regulatory information only
2401	OSHA Permissible Exposure Limits Table Z-1	<a href="https://www.osha.gov/dsg/annotated-pels/tablez-1.html">https://www.osha.gov/dsg/annotated-pels/tablez-1.html</a>	Other searches caught this information
2402	OSHA Permissible Exposure Limits Table Z-2	<a href="https://www.osha.gov/dsg/annotated-pels/tablez-2.html">https://www.osha.gov/dsg/annotated-pels/tablez-2.html</a>	Other searches caught this information
2403	OSHA Permissible Exposure Limits Table Z-3	<a href="https://www.osha.gov/dsg/annotated-pels/tablez-3.html">https://www.osha.gov/dsg/annotated-pels/tablez-3.html</a>	Other searches caught this information
2503	NOAA National Oceanic and Atmospheric Administration	<a href="http://www.noaa.gov">www.noaa.gov</a>	Data provided in cameo database already
2508	US International Trade Commission	<a href="https://www.usitc.gov/">https://www.usitc.gov/</a>	Provides export information, which is not on topic for this search
2510	USGS US Geological Survey, National Water Information System	<a href="http://waterdata.usgs.gov/nwis">http://waterdata.usgs.gov/nwis</a>	Included in EPA OPPT monitoring database
2511	CDC National Report on Human Exposure to Environmental Chemicals	<a href="http://cdc.gov/exposurereport/index.html">cdc.gov/exposurereport/index.html</a>	Moved from automated to manual search
3050	ECHA	<a href="http://echa.europa.eu/">echa.europa.eu/</a>	Too general; refined search strategy to target specific subsites

3056	Japan NITE CHEmicals Collaborative Knowledge database	<a href="http://www.safe.nite.go.jp/jcheck/search.action?request_locale=en">http://www.safe.nite.go.jp/jcheck/search.action?request_locale=en</a>	Other searches caught this information
3075	International Resources	<a href="https://echa.europa.eu/registration-dossier/">https://echa.europa.eu/registration-dossier/</a>	Other searches caught this information
3149	OECD	<a href="http://webnet.oecd.org/CCRWEB/Search.aspx">http://webnet.oecd.org/CCRWEB/Search.aspx</a>	This is captured by the echemportal.org site which also provides record for Japan, Finland, Australia, The Netherlands
3154	OECD eChemPortal	<a href="http://www.echemportal.org/echemportal/index?pageID=0&amp;request_locale=en">http://www.echemportal.org/echemportal/index?pageID=0&amp;request_locale=en</a>	This is a duplicate
3255	WHO International Program on Chemical Safety (UN)	<a href="http://www.who.int/ipcs/en/">http://www.who.int/ipcs/en/</a>	These data appear in inchem, which is in echemportal
3400	Environment Canada	<a href="http://www.ec.gc.ca/default.asp?lang=En&amp;n=FD9B0E51-1">http://www.ec.gc.ca/default.asp?lang=En&amp;n=FD9B0E51-1</a>	Chemical Substances page links to relevant pages at this site

## **D. LITERATURE SEARCHES FOR ENVIRONMENTAL HAZARD**

---

The sources searched in the environmental hazard literature search are provided in Table\_Apx D-1. The specific search strategies are provided in the remainder of Appendix D.

**Table\_Apx D-1. Sources Used For Gray Literature Search for the Ecotoxicity Topic Area**

Trusted Source Category	Source	Manual or Automated?	Searched By:	Keywords	Source Address
Other US Agencies	eChemPortal	Manual	Chemical	CAS Number or chemical name	<a href="http://www.echemportal.org/echemportal/participant/page.action?pageID=9">http://www.echemportal.org/echemportal/participant/page.action?pageID=9</a>

International Resources	Environment Canada: Draft and Final CEPA Assessments	Manual	Chemical	CAS Number or chemical name	<a href="http://www.ec.gc.ca/lcpe-cepa/default.asp?lang=En&amp;xml=09F567A7-B1EE-1FEE-73DB-8AE6C1EB765">http://www.ec.gc.ca/lcpe-cepa/default.asp?lang=En&amp;xml=09F567A7-B1EE-1FEE-73DB-8AE6C1EB765</a> <a href="http://www.ec.gc.ca/lcpe-cepa/default.asp?lang=En&amp;xml=6892C255-5597-C162-95FC-4B905320F8C">http://www.ec.gc.ca/lcpe-cepa/default.asp?lang=En&amp;xml=6892C255-5597-C162-95FC-4B905320F8C</a>

## A. Chemical verification process

1. Verify the chemical substance using chemical verification sources as noted in the *ECOTOX Chemical Verification and Entry Procedure* (<https://cfpub.epa.gov/ecotox/help.cfm?helptabs=tab4>).

Chemical verification ensures that the chemical name and CAS Number for the chemical substance linked and correct. Chemical verification sources are searched by the name and/or CAS Number and are cross-checked to ensure the chemical name - CAS Number relationship is valid. Additional information including synonyms and molecular formulas are also located in the verification sources. Once the name and CAS Number have been verified, they are entered into the U.S.EPA's ECOTOX chemical file for use. The primary source for chemical verification is STN International, <http://www.stn-international.com> (operated by Chemical Abstract Services) and contains information on all classes of chemicals, organic, pesticides, inerts, solvents, etc. The chemical verification sources include:

- Online Databases, e.g. STN International (<http://www.stn-international.com>)
  - Chemical Compendiums, e.g. Dictionary of Organic Chemicals, Registry of Toxic Effects of Chemical Substances
  - Chemical Catalogs, e.g. Sigma-Aldrich (<https://www.sigmaaldrich.com>)
  - Internet websites, e.g. company websites displaying chemical MSDS and label information
2. Find related chemicals that may be of interest to OPPT RAD (the relationship of the chemicals are noted in Table\_Apx D-2, column headed Relationship, e.g. Parent, is the chemical substance requested, Degradates (chemicals formed as the chemical substance is degraded), and Related compounds (similar in structure to the chemical substance requested, e.g. isomers)), if located. Synonym names and trade names to include in the literature search strategy are also located. Sources for related chemicals and synonym chemical names are at:
    - PAN: The Pesticide Action Network (<http://www.pesticideinfo.org>) is a site that provides information about pesticides and also includes inerts and solvents used in chemical formulations. After entering a name or CAS number into the search field, choose the chemical of interest from the search results and scroll down to the bottom of the page. Related chemicals will be listed here along with a reason. Parent chemicals, derivatives, and degradates/metabolites can be found here.
    - PFATE: EPA's Pesticide Fate Database (located at the contractor's site) is a database that provides degradates for chemicals, mostly pesticides. Searching on a chemical name returns associated degradates.
    - DOC: Dictionary of Chemical Names and Synonyms for synonym names. STN should also be used for the synonym search if a search was conducted to verify the chemical.
    - ECOTOX: Search the U.S. EPA's ECOTOX chemical database for chemical synonyms and related chemicals. ([www.epa.gov/ecotox](http://www.epa.gov/ecotox))

- Additional chemical verification sources, if needed from Appendix A from the *ECOTOX Chemical Verification and Entry Procedure* (<https://cfpub.epa.gov/ecotox/help.cfm?helptabs=tab4>) contains a list of approved sources of verification for chemical names and structures. Common sources searched may include:
  - Registry of Toxic Effects of Chemical Substances
  - TSCA Chemical Substances Inventory
  - Compendium of Pesticide Common Names
  - California Department of Pesticide Regulation
- If the chemical cannot be found on these websites or any other approved sources, an Internet search is performed to locate additional information.

## **B. UNIFY Chemical Report Setup Worksheet**

**Step 1. Identifying the chemical name(s), CAS number(s) and related chemicals.** If related chemicals are located, add a line Table\_Apx D-2.

**Chemical requested: Tetrachloroethylene**

**STN International (STN) - <http://www.stn-international.com>**

CAS # 127-18-4

Ethene, 1,1,2,2-tetrachloro-

1,1,2,2-Tetrachloroethene

Tetraleno  
Tetropil

**Pesticide Action Network (PAN)** - <http://www.pesticideinfo.org/>

Tetrachloroethylene – CAS# 127-18-4 (Parent)

Chemical Uses: PAN – Solvent

(US EPA PC Code ) , 078501 (US EPA PC Code Text ) , 1174 (CA DPR Chem Code ) , 127-18-4 (CAS number) , 127184 , 127184 (CAS number without hyphens) , Ethene, tetrachloro- , Perchloroethylene , Perchloroethylene (NO INERT USE) , Perchloroethylene (Tetrachloroethylene) , Tetrachloroethene , Tetrachloroethylene , TETRACHLOROETHYLENE (CA DPR Chem Code Text ) , Tetrachloroethylene (Perchloroethylene) , Tetrachloroetileno

Related Chemical: 1,1,2,2-Tetrachloroethane, CAS# 127-18-4

Related Chemical: 1,1,1-Trichloroethane, CAS# 71-55-6

Related Chemical: 1,1,2-Trichloroethane, CAS# 79-00-5

Related Chemical: 1,1-Dichloroethylene, CAS# 75-35-4

Related Chemical: Hexachloroethane, CAS# 67-72-1

Related Chemical: Pentachloroethane, CAS# 76-01-7

Related Chemical: Trichloroethylene, CAS# 79-01-6

#### **PFATE**

No additional or related chemical information located.

#### **ECOTOX Chemical database**

Contains “Tetrachloroethylene”

No additional or related chemical information located.

**Online** - [http://eawag-bbd.ethz.ch/tce2/tce2\\_map.html](http://eawag-bbd.ethz.ch/tce2/tce2_map.html)

Related Chemical: cis-1,1-Dichloroethene, CAS# 156-59-2

Related Chemical: trans-1,2-Dichloroethene, CAS# 156-60-5

Related Chemical: Ethylene, CAS# 74-85-1

#### **Table\_Apx D-2. Chemical(s) located for Tetrachloroethylene (PERC)**

\*Related compounds were not included in the search per EPA.

Chemical Name	CAS #	Relationship (e.g.,Parent, Degradate) and Source
Tetrachloroethylene	127184	Parent (PAN)

*1,1,2,2,-Tetrachloroethane	79345	Related (PAN)
*1,1,1-Trichloroethane	71556	Related (PAN)
*1,1,2-Trichloroethane	79005	Related (PAN)
*1.1-Diochloroethylene	75354	Related (PAN)
*Hexachloroethane	67721	Related (PAN)
*Pentachloroethane	76017	Related (PAN)
*Trichloroethylene	79016	Related (PAN)
*cis-1,2-Dichloroethene	156592	Degradate (Online)
*trans-1,2-Dichloroethene	156605	Degradate (Online)
*Ethylene	74851	Degradate (Online)
*Vinyl Chloride	75014	Degradate (Online)

## **Step 2. Create a unique list of Chemical Search Terms**

From the searches conducted in Step 1, chemical terms from searches are listed below, create a unique list of chemical terms to be used for the Chemical of Concern literature search. Non-English, long scientific chemical names and terms documented to cause false hits are not used and are not in bold. Note that if one term is part of another term, e.g. Tetrachloromethane and 1,1,1,1-Tetrachloromethane, only the first term is used, e.g. Tetrachloromethane. Terms used to generate the final list of chemical terms are in **BOLD**.

### **1. STN**

Ethene, 1,1,2,2-tetrachloro-

### E-3 Inclusion/Exclusion Criteria and Tags for the Exposure Literature

**Table\_Apx E-3. Exposure Inclusion/Exclusion Criteria Tetrachloroethylene (PERC) and Tags**

Tag	Inclusion/Exclusion Criteria	Example Keywords
<b>ON TOPIC, GENERAL EXPOSURE TAGS</b>		
Ecological	<b>INCLUDE:</b> <ul style="list-style-type: none"> <li>• Covers ecological exposure, including exposure to flora and fauna</li> </ul> <b>EXCLUDE:</b>	concentration, mammal, avian, fish, aquatic

	<ul style="list-style-type: none"> <li>• Studies limited to describing concentrations in mineral deposits only</li> <li>• Pchem properties of environmental sample or chemical structure without concentration data</li> </ul>	
General Population	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>• Covers exposure to the general population due to ambient concentrations in environmental media/food</li> </ul> <p><b>EXCLUDE:</b></p> <ul style="list-style-type: none"> <li>• Studies involving exposures to laboratory-produced chemical or chemical mixture in a lab setting, rather than environmentally-derived samples</li> <li>• Studies without measured or modeled concentrations</li> <li>• Studies involving measured dust concentrations from consumer products, these should be tagged to Consumer Exposure</li> </ul>	general population exposure/dose, releases, background levels, ambient/outdoor air, deposition, surface water, drinking water, ground water, soil, sediment, sludge, disposal, life cycle
Consumers	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>• Covers exposure to consumers who use a product or article containing the chemical</li> </ul> <p><b>EXCLUDE:</b></p> <ul style="list-style-type: none"> <li>• Studies involving exposures to laboratory-produced chemical, rather than environmentally-derived samples</li> </ul>	consumer product exposure/dose, indoor/residential, product, article, aerosol, dust, indoor air, hand-to-mouth, surface, shower, dermal loading
Susceptible Population	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>• Covers exposure for a particular potentially exposed and susceptible subpopulation</li> </ul>	susceptible/sensitive subpopulation, infants, children, pregnancy, senior, aged, elderly, older women, men, gender, immunocompromised, diseased population, preexisting disease, genetics, socioeconomic status, race
Highly Exposed Population	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>• Covers a population exposed at a level higher than the general population</li> </ul>	highly-exposed sub population, near-facility population, higher-than-average exposure, above background, populations near manufacturing facilities
Other Exposure	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>• Mentions uses or regulatory limits but does not contain exposure</li> </ul>	

	<p>values/estimates; tag also to regulatory or use-specific if applicable</p> <ul style="list-style-type: none"> <li>Studies supporting or possibly supporting exposure sections, but <u>not</u> a study included in one or more of the preceding relevant categories</li> </ul>	
<b>ON TOPIC, GENERAL STUDY TAGS</b>		
Data Type	<b>INCLUDE:</b> Empirical Modeled	Empirical: measured Modeled: simulated, estimated, modeled
Source Type	<b>INCLUDE:</b> Database Search Gray Literature <ul style="list-style-type: none"> <li>EPA Source</li> <li>Other Government Source</li> <li>Industry-Specific Source</li> <li>Peer-reviewed Literature</li> <li>Direct Communications</li> </ul> Primary Source Secondary Source	Determination of source type of database search or gray literature is by search type, rather than keyword.  Primary Source: Novel, experimental, modeling Secondary Source: Review
Use Specific	<b>INCLUDE:</b> Source contains use-specific data or information	adhesive, flame-retardant, paint-stripper, coolant
Chemical Specific	<b>INCLUDE:</b> Source contains information specific to the chemical of interest	PERC and synonyms
Regulatory	<b>INCLUDE:</b> Source contains a regulatory value/limit	Water quality criteria, NAAQS <sup>2</sup> , IRIS <sup>3</sup>
<b>OFF TOPIC</b>		
Off topic	<b>INCLUDE:</b> Off topic in context of identified information needs	
Human Health	<b>INCLUDE:</b> Contains information that is potentially on-topic for the human health hazard topic area	
<b>OTHER</b>		
Not peer-reviewed	<b>INCLUDE:</b> Published without formal peer review. Use in addition to relevant or not relevant (not an exclusive tag).	
Foreign language	<b>INCLUDE:</b> Full-text published in non-English language. Use in addition to relevant or not relevant (not an exclusive tag).	

<sup>3</sup>Ecological search results may overlap with environmental hazard search results. EPA intends to harmonize results during the refinement phase.

<sup>2</sup>National Ambient Air Quality Standard

<sup>3</sup>Integrated Risk Information System

## E-4 Inclusion/Exclusion Criteria and Tags for the Human Health Hazard Literature

**Table\_Apx E-4. Human Health Hazard Inclusion/Exclusion Criteria and Tags**

Tag Category	Inclusion/Exclusion Criteria	Example Keywords
<b>ON TOPIC, GENERAL HUMAN HEALTH TAGS</b>		
Human Hazard ID	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies evaluating human health effects resulting from exposure to the chemical. Includes epidemiology studies (measure an adverse outcome in an exposed population), experimental studies (e.g. individuals exposed to chemical in a controlled study) and case studies (e.g. individual case report on accidental exposure to chemical)</li> <li>Acute, subchronic, and chronic exposures</li> </ul> <p>**Also choose applicable health effect tags in next section "Tetrachloroethylene (PERC) Health Effect Tags"</p> <p><b>EXCLUDE:</b> Occupational studies that do not specify specific solvent exposure</p>	case-control study; cohort study; odds ratio; risk ratio; incidence; prevalence
Animal Hazard ID	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies evaluating animal health effects resulting from controlled exposure to the chemical in mammals such as primates, rodents, dog, rabbit, and mink.</li> </ul> <p>**Also choose applicable health effect tags in next section "Tetrachloroethylene (PERC) Health Effect Tags"</p> <p><b>EXCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies in birds and fish; these can be tagged to MOA and/or ADME if applicable</li> </ul>	chronic; developmental; incidence; NOEL/LOEL; NOAEL/LOAEL; dose; response
ADME	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies describing the absorption, distribution, metabolism and elimination (ADME) of the chemical. This may include <i>in vitro</i> studies</li> </ul>	absorption, distribution, metabolism, elimination, bioavailability, tissue burden, metabolites, analytes, excretion, elimination rates, clearance, half-life, dose-duration, km, ki, vmax, lactational transfer, inhalation pharmacokinetics, toxicokinetics, PBPK, PBTK accumulation or

		retention in breast milk, serum, plasma, blood, urine, feces, adipose tissue
MOA	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies evaluating the mode of action (MOA) of a chemical (i.e., molecular events occurring after exposure that may contribute to the development of adverse health effects) in animals and humans</li> <li>Evaluation of specific pathways (e.g., through the use of antioxidants to determine importance of ROS in hepatic effects)</li> <li>Studies in knockout mice</li> <li>Assessment of hormone levels or gland function, immune system parameters</li> </ul>	<i>in vitro</i> models, genomics, proteomics, genotoxicity, indirect genotoxicity, changes in gene expression or mRNA levels
Susceptibility	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies that specifically evaluate genetic traits or variations, subpopulations or lifestages, in relation to PERC exposure/effects</li> </ul> <p><b>EXCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies using knock-out mice</li> </ul>	influence of genetic traits, variations, genetic polymorphisms (e.g. single nucleotide polymorphisms; SNPs) on health effects relating to the chemical
<b>ON TOPIC, TETRACHLOROETHYLENE (PERC) HEALTH EFFECT TAGS</b>		
Hepatic non-cancer	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies evaluating hepatic effects in the liver, biliary tract, gall bladder</li> </ul>	fatty degeneration, cirrhosis, fibrosis, necrosis, hypertrophy, hyperplasia, proliferation, increased/decreased liver enzymes, bile acids, cholesterol and triglycerides in serum/blood, increased/decreased liver weight, jaundice, vacuolization
Renal non-cancer	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies evaluating renal effects in the kidney, bladder, ureter and related</li> </ul>	nephropathy, oliguria, increased/decreased blood urea nitrogen, nephritis, nephrosis, hyaline droplet formation, necrosis and regeneration of proximal tubules, markers of kidney damage e.g. excretion of proteins/blood in urine, alpha 2U globulin
Neurological non-cancer	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies evaluating effects in the central nervous system (CNS) or peripheral nervous system (PNS), brain, nerves, behavior, neurochemical alterations, sensory effects, neurodevelopmental effects in exposed infants and children</li> </ul>	changes in brain pathology, CNS depression (dizziness, drowsiness, sleepiness, loss of consciousness/ anesthesia, hypo activity, ataxia, lethargy, impaired coordination or balance, narcosis), nerve/neuronal injury and/or degeneration, neuropsychological outcomes (e.g. mood/personality changes), changes in neurobehavioral tests (cognitive,

		motor function) and neurophysiological effects (visual and auditory function), memory
Reproductive/Developmental non-cancer	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies examining reproductive outcomes, offspring and/or studies examining developmental effects</li> </ul> <p><b>Notes:</b></p> <ul style="list-style-type: none"> <li>Developmental neurotoxicity effects are categorized in the Reproductive/Developmental non-cancer tag and Neurological non-cancer tag</li> </ul>	reduced fertility, effects on reproductive organs, sperm, estrous cycle, increased resorption and post implantation loss, viability, fetal death, birth weight, growth, maturation, teratogenicity, birth defects, visceral and/or skeletal malformations, follicle counts
Hematological/Immunological non-cancer	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies examining susceptibility or resistance to infection or disease, function of innate or adaptive immunity; Studies examining changes in blood parameters</li> </ul>	hemoglobin, red blood cell count, platelet count, hematocrit, hypersensitization, increased/decreased white blood cells, prothrombin time, effects on the spleen
Carcinogenicity	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies that evaluate any cancer effect</li> </ul>	tumor, particular cancers include: leukemia, liver, kidney, male breast cancer, bladder
Other non-cancer health effect	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Studies in which other non-cancer health effects, not defined by the categories above, were examined</li> </ul>	NA
<b>ON TOPIC, GENERAL STUDY TAGS</b>		
Source Type	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Database Search</li> <li>Gray Literature <ul style="list-style-type: none"> <li>EPA Source</li> <li>Other Government Source</li> <li>Industry-Specific Source</li> <li>Peer-reviewed Literature</li> <li>Direct Communications</li> </ul> </li> <li>Primary Source</li> <li>Secondary Source</li> </ul>	Determination of source type of database search or gray literature is by search type, rather than keyword Primary Source: Novel, experimental, modeling Secondary Source: Review
<b>NOT ON TOPIC</b>		
Not on topic	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Reference is not on topic in the context of any of the outlined categories (or tags)</li> </ul>	NA
Exposure <sup>1</sup>	<p><b>INCLUDE:</b></p> <ul style="list-style-type: none"> <li>Reference contains exposure information only, i.e., without associated information on health effects (e.g. clinical signs or symptoms in exposed population) and will be evaluated by that team.</li> </ul> <p><b>Notes:</b></p>	industrial hygiene surveys, general populations exposures (e.g. measured in air, water and food)

	<ul style="list-style-type: none"> <li>Levels of the chemical in biological tissues or fluids were considered related to the human health discipline and categorized under the ADME tag</li> </ul>	
<b>OTHER</b>		
Foreign language study	<b>INCLUDE:</b> <ul style="list-style-type: none"> <li>Full-text reference published in non-English language. Use in addition to On topic or Off topic tags.</li> </ul>	Title will likely be in brackets or journal title will be in foreign language only

<sup>1</sup>An exposure tag was included to capture references potentially relevant to the exposure topic area to be reviewed by exposure experts

## E-5 Inclusion/Exclusion Criteria for the Environmental Hazard Literature

The following are the inclusion criteria used for the results of the ECOTOX literature search. Studies that meet the acceptability criteria are considered on-topic (or applicable).

1. The paper reports toxicology information for the chemical of interest.
2. The article is published in the English language.
3. The study is presented as a full article.
4. The paper is a publicly available document.
5. The paper is the primary source of the data.
6. The paper reports a calculated endpoint.
7. The paper reports that treatment(s) were compared to an acceptable control.
8. The paper reports an explicit duration of exposure.
9. The paper reports a concurrent environmental chemical concentration/dose or application rate.
10. The paper reports the location of the study (e.g., laboratory vs. field).
11. The paper reports a biological effect.
12. The paper reports the species that was tested; and this species can be verified in a reliable source.
13. The paper reports effects associated with a single chemical exposure.

For more information, refer to the document “*ECOTOX Literature Searches, Citation Identification and Skimming*”

(<https://cfpub.epa.gov/ecotox/blackbox/help/ECOTOXLiteratureSearchesCitationIdentificationandSkimming.pdf>).

The following is a list of ECOTOX rejection codes, exclusion terms and definitions utilized under the ECOTOX database efforts. Each citation that is identified as off topic (or not applicable) to the ECOTOX database will have one or more of these codes.

For more information, refer to the document *ECOTOX Literature Searches, Citation, Identification and Skimming*

(<https://cfpub.epa.gov/ecotox/blackbox/help/ECOTOXLiteratureSearchesCitationIdentificationandSkimming.pdf>) under Appendix C: Unify References Data Fields and Codes.

**Table\_Apx E-5. ECOTOX Codes Denoting Exclusion Criteria**

<b>Keyword</b>	<b>Description</b>
ABSTRACT	Study results published as an abstract only.
ADDENDUM	Publication is a supplement to another publication and attach to that full publication (erratum or addendum).
BACTERIA	Bacteria and microbes - for microbes, enter bacteria as keyword, Includes microbes and Microtox tests.
BENEFICIAL EFFECT	Studies that result in a positive effects (improving the health of the organism
BIOLOGICAL TOXICANT	General biological toxicants including venoms, fungal toxins, Bacillus thuringiensis, and other plant, animal or microbial extracts or toxins not purified.
CAS # UNAVAILABLE	Chemical is not verifiable or no CAS # available.
CHEM METHODS	The description of chemical analysis procedures and measurements in a laboratory setting. No organism or biochemical measurements are reported in the paper.
ECOCHEM VERIFICATION SOURCE	Publication used to verify chemical CAS or physical/chemical properties.
EFFLUENT	Includes sewage and polluted runoff. Used in aquatic publications. Terrestrial categorized under MIXTURE keyword.
FATE	Chemical distribution in natural media (water, soil, air) and residue not measured in the organism or valid ECOTOX organism not present.
FOOD	Test organism is dead or harvested in the form of consumer-ready food products. Frequently studies include analyses of fresh meat or produce purchased in a market, or processed and packaged foods (e.g., wine, cheese, canned fish, sausages, packaged milk, or cereal products). This includes market studies used to enhance the marketability of an organism and maximize a producer's profit. Optimum marbling of meat, color of apple skins, and firmness of bananas for durability in shipping.
HUMAN HEALTH	Studies with human subjects or with surrogate animal subjects for human health risk assessment. If a surrogate laboratory rodent (RODE) or domestic animal (DOM,DOMA) is tested, citations will be rejected unless the effect is GRO, MOR, POP, BEH (feeding/reproductive behavior only) or REP.
INCIDENT	Reports of animal deaths by poison, which lacks a usable concentration and/or duration.
INCOMPLETE CITATION	Citation is not complete; order status ARCHIVE.
INCORRECT CITATION	Citation is wrong; order status ARCHIVE.
INHALE	Inhalation dose route only. Keyword also used for intratracheal instillation of a chemical directly into the lungs.
METHODS	Publication provides documentation for toxicology test methods, experimental design, statistical methods, standard terminology, recently developed test methods.
MIXTURE	No single chemical tests reported. The exception for In Situ studies (field studies of chemicals mixtures) are coded for bioaccumulation, if the exposure duration and concentrations of any specific chemical component of the ambient water or effluent is given for caged or transplanted organisms.
MODELING	Modeling only, no new organism exposure data; modeling studies may report original toxicity tests performed as comparisons or as a basis for extrapolation, if so, papers are ordered.
NO CONC	No usable dose or concentration reported after examination of the entire paper; includes lead shot studies lacking dose information and which report only the number of pellets. Concentrations reported in log units only are not coded.
NO DURATION	No duration reported (entire publication examined).
NO EFFECT	No organism effect reported. Chemical metabolism is included (defined as biological effect on the chemical).
NO SOURCE	Source of publication undetermined; order status ARCHIVE (includes internal chemical company document and personal communication citations).
NO TOXICANT	No chemical toxicant added or not ecotoxicologically relevant chemical.

	- includes ambient air component chemicals (ozone, CO2, SO2) and pollution -other ambient conditions including changes in conditions (other than chemical addition), including radioactivity, ultraviolet light (UV), temperature, pH, salinity, dissolved oxygen (DO), or other water, air or soil parameters
NON-ENGLISH	Paper's full text language other than English - (these papers do not receive ECOREF numbers).
NUTRIENT	<i>In situ</i> chemicals tested as nutrients.
OIL	Oil and petroleum products
PUBL AS	Paper (by same author/study) was published in another journal or book, ECOREF number of other paper listed in References citation. Ex. Publ As #####
QSAR	Quantitative Structure Activity Relationships.
REFS CHECKED	References in a REVIEW have been checked.
RETRACTED	Retracted article from publication by journal.
REVIEW	All toxicity tests reported elsewhere; REVIEW bibliography may be skimmed to identify relevant citations.
SEDIMENT CONC	Chemical concentration reported in sediment only (if pore or overlying water concentrations reported, then applicable).
SKIMMED	Used to show that publication has been skimmed for applicable sections.
SPECIES VERIFICATION SOURCE	Publication used to verify species common or scientific name.
SURVEY	Measured chemical present in organism, but lacking quantification of exposure; lacks usable concentration and/or duration.
VIRUS	Virus used as a test organism.
YEAST	Yeast used as test organism.
