LINCOLN-LANCASTER COUNTY AIR POLLUTION CONTROL PROGRAM

ARTICLE 2. REGULATIONS AND STANDARDS

- SECTION 20. PARTICULATE EMISSIONS LIMITATIONS AND STANDARDS (Exceptions due to breakdowns or scheduled maintenance: See Section 35 of these Regulations and Standards)
- (A) No person shall cause, suffer, allow or permit the emission of particulates from any processing machine, equipment, device or other articles, or combination thereof, except indirect heating equipment and incinerators, in excess of the amounts allowed in Table 20-1 during any one hour.
- (B) No person shall cause or allow particulate matter caused by the combustion of fuel to be emitted from any stack or chimney into the outdoor atmosphere in excess of the hourly rate set forth in the following table:

	Maximum Allowable
	Emissions
Total Heat Input in Million	of Particulate Matter in
British Thermal Units	Pounds per Million British
Per Hour	Thermal Units
10 or less	0.60
10,000 or more	0.12

(C) The allowable emission rate for equipment having immediate heat input between 10 (10^6) BTU and 10,000 (10^6) BTU may be determined by the formula:

$$A = \frac{1.026}{T^{233}}$$

A = The allowable emission rate in $Lb/10^6$ BTU

I = The total heat input in 10^6 BTU/Hr

(D) For the purpose of these regulations, the heat input shall be the aggregate heat content of all fuels whose products of combustion pass through a stack, or the equipment manufacturer's or designer's guaranteed maximum input, whichever is greater. The total heat input of all fuel burning units at a plant or on a premises shall be used for determining the maximum allowable amount of particulate matter which may be emitted.

(E) No person shall cause or allow emissions, from any existing source, which are of an opacity equal to or greater than twenty percent (20%), as evaluated by Method 9 in Appendix A of 40 CFR Part 60, which is incorporated herein, by reference, or recorded by a continuous opacity monitoring system operated and maintained pursuant to 40 CFR Part 60 Appendix B except as provided for in paragraph (F) of this Section.

Interpolation of the data in this table for process weight rates up to $60,000~\mathrm{Lb/Hr}$ shall be accomplished by use of the equation E = $4.10~\mathrm{p\cdot67}$ and interpolation and extrapolation of the data for process weight rates in excess of $60,000~\mathrm{Lb/Hr}$ shall be accomplished by use of the equation E = $55.0~\mathrm{p\cdot11-40}$, where E = rate of emission in Lb/Hr and P = process weight rate in Tons/Hr. If two or more units discharge into a single stack, the allowable emission rate will be determined by the sum of all process weights discharging into the single stack.

(F) Exceptions:

- (1) No person shall cause or allow emissions from any existing teepee waste wood burner which are of an opacity equal to or greater than forty percent (40%).
- (2) No person shall cause or allow emissions from any existing alfalfa dehydration plant dryer which are of an opacity equal to or greater than thirty percent (30%).

- (3) Emission sources subject to monitoring requirements of Section 34, paragraph (E) of these Regulations and Standards are allowed to have one six minute period per hour of not more than 27 percent opacity.
- (G) All new sources shall comply with paragraph (E) of this Section unless a New Source Performance Standard applies as specified in Section 18 of these Regulations and Standards.
