

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGION III

FINAL PERMIT FOR CORRECTIVE ACTION

WASHINGTON RESEARCH CENTER 7500 GRACE DRIVE COLUMBIA, MARYLAND 21044 EPA ID NO. MDD074933961

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY FINAL PERMIT

FOR CORRECTIVE ACTION;

PURSUANT TO THE RESOURCE CONSERVATION AND RECOVERY ACT AS AMENDED BY THE HAZARDOUS AND SOLID WASTE AMENDMENTS OF 1984

Permittee:

W. R. Grace & Co.-Conn.

Permit Number:

MDD074933961

Facility Location:

Washington Research Center

7500 Grace Drive

Columbia, Maryland 21044

The United States Environmental Protection Agency (EPA) under the authority of the Solid Waste Disposal Act as amended by the Resource Conservation and Recovery Act of 1976 (RCRA) and the Hazardous and Solid Waste Amendments of 1984 (HSWA), 42 U.S.C. § 6901 et seq., and regulations promulgated thereunder and set forth at 40 C.F.R. Parts 260-271, has prepared the Permit for Corrective Action (Final Permit) for the facility owned and operated by W. R. Grace & Co.-Conn. (W.R. Grace or Permittee) and located at 7500 Grace Drive in Columbia, Maryland (Facility). A map depicting the Facility location and key features, including the Facility boundary subject to this Final Permit, is provided as Attachment A.

On July 10, 1992, EPA issued a HSWA Corrective Action Permit (EPA I.D. # MDD074933961) to the Permittee under RCRA Section 3004(u), 42 U.S.C. § 6924(u) (Original Permit). Conditions of the Original Permit, which on its terms expired on August 14, 2002, were administratively continued under 40 C.F.R. Section 270.51. EPA issued two subsequent permit modifications in 2007 and 2016, respectively. The 2007 Permit Modification became effective on November 30, 2007 (First Permit Modification) and the 2016 Permit Modification (Second Permit Modification) became effective on January 1, 2016. The Original Permit, as modified by the First and Second Permit Modifications, expired on November 30, 2017. The Original Permit was administratively continued until the Final Permit for the Facility became effective.

The Draft Permit for Corrective Action (Draft Permit) was published for public comment on November 30, 2017. The forty-five (45) day public comment period ended on January 14, 2018. During the comment period, EPA received one set of comments, a letter dated January 12, 2018 from W.R. Grace & Co.-Conn. With this final permit decision, EPA has prepared the enclosed "Response to Comments", which in accordance with 40 C.F.R. § 124.17, describes and responds to all significant comments and specifies which provisions of the Draft Permit and Draft Statement of Basis have been changed in the Final Permit decision.

This Permit is effective on June 14, 2018 and shall remain in effect until June 14, 2028 unless revoked and reissued, modified or terminated in accordance with 40 C.F.R. § 270.41.

<u>INTRODUCTION</u>

The United States Environmental Protection Agency (EPA) under the authority of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976 (RCRA) and the Hazardous and Solid Waste Amendments of 1984 (HSWA), 42 U.S.C. §§ 6901-6992k, and regulations promulgated thereunder and set forth at 40 C.F.R. Parts 260-271, is hereby issuing a RCRA Corrective Action Permit (Corrective Action Permit or Permit) for the facility owned and operated by W. R. Grace & Co.-Conn. (hereinafter Grace or Permittee) located at 7500 Grace Drive in Columbia, Maryland 21044 at 76° 54' 13" West Longitude and 39° 11' 34" North Latitude (Facility).

As of the date of issuance of this Permit, the State has not received authorization to administer the corrective action provisions of HSWA. This Permit, which addresses corrective action provisions of HSWA for which EPA is the implementing authority in Maryland, will be enforced by EPA.

This Permit consists of the conditions contained herein (Parts I and II and Attachments A and B) and the applicable federal regulations, including 40 C.F.R. Parts 260 through 264, Part 266, Part 268, Part 270, Part 273 and Part 124. The Permittee shall comply with all terms and conditions set forth in this Corrective Action Permit. Nothing in this Corrective Action Permit shall limit EPA's authority to undertake, or require any person to undertake, response action or corrective action under any law, including, but not limited to, Sections 104 and 106 of CERCLA, 42 U.S.C. §§ 9604 and 9606, and Section 7003 of RCRA, 42 U.S.C. § 6973. Nor shall any permit condition relieve the Permittee of any obligations under any law, including, but not limited to, Section 103 of CERCLA, 42 U.S.C. § 9603, to report releases of hazardous wastes, constituents, or substances to, at, or from the Facility.

This Permit is based on information provided to EPA by the Permittee. Section 3005(c)(3) of RCRA provides EPA the authority to review and amend the Permit at any time. Any inaccuracies found in the information submitted by the Permittee may be grounds for the termination, modification or revocation and reissuance of this permit (see 40 C.F.R. §§ 270.41, 270.42 and 270.43). The Permittee must inform EPA of any deviation from or changes in the information submitted by the Permittee that would affect the Permittee's ability to comply with the applicable statutes, regulations or Permit conditions.

LIST OF ATTACHMENTS

The following Attachments are incorporated, in their entirety, by reference into this Permit. These incorporated attachments contain enforceable conditions of this Permit.

Attachment A: RCRA Permitted Facility and Key Features

Attachment B: Sampling and Reporting Plan

PART I – STANDARD FACILITY CONDITIONS

A. PERMIT ACTIONS

This Corrective Action Permit may be modified, revoked and reissued, or terminated for cause as specified in 40 C.F.R. §§ 270.41, 270.42 and 270.43. The filing of a request for a permit modification, revocation and reissuance, or termination or the notification of planned changes or anticipated noncompliance on the part of the Permittee, does not stay the applicability or enforceability of any permit condition (40 C.F.R. § 270.30(f)). Review of any application for a permit renewal shall consider improvements in the state of control and measurement technology, as well as changes in applicable regulations and laws.

B. STANDARD DUTIES AND REQUIREMENTS

1. Duty to Comply

The Permittee shall comply with all conditions of this Corrective Action Permit, except to the extent and for the duration such noncompliance is authorized by an emergency permit issued under 40 C.F.R. § 270.61 or the analogous provisions of the State's authorized hazardous waste management regulations. Any other permit noncompliance constitutes a violation of RCRA and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application. (40 C.F.R. § 270.30(a))

2. Duty to Reapply

If the Permittee wishes to continue an activity regulated by this Permit after the expiration date of this Permit, the Permittee must apply for and obtain a new permit. (40 C.F.R. § 270.30(b))

3. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for the Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Permit. (40 C.F.R. § 270.30(c))

4. Duty to Mitigate

In the event of noncompliance with this Permit, the Permittee shall take all reasonable steps to minimize releases to the environment and shall carry out such measures as are reasonable to prevent significant adverse impacts on human health or the environment. (40 C.F.R. § 270.30(d))

5. Duty to Properly Operate and Maintain

The Permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the Permittee to achieve compliance with the conditions of this Permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of this Permit. (40 C.F.R. § 270.30(e))

6. Duty to Provide Information

The Permittee shall furnish, within the specified time, any relevant information which the EPA may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this Corrective Action Permit. The Permittee shall also furnish to EPA, upon request, copies of records required to be kept by this Corrective Action Permit. (40 C.F.R. §§ 270.30(h) and 264.74(a))

7. Duty to Allow Inspection and Entry

Pursuant to 40 C.F.R. § 270.30(i), the Permittee shall allow the Regional Administrator, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:

- a. Enter at reasonable times upon the Permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this Permit;
- b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this Permit;
- Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Permit; and
- d. Sample or monitor, at reasonable times, for the purpose of assuring permit compliance or as otherwise authorized by RCRA, any substances or parameters at any location.

8. Duty to Monitor and Record Results

Pursuant to 40 C.F.R. § 270.30(j), the Permittee shall comply with the following requirements:

- a. Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity. All sampling and analyses shall be of adequate quality, scientifically valid, of known precision and accuracy, and of acceptable completeness, representativeness and comparability. Laboratory analysis of each sample must be performed using an appropriate method for testing the parameter(s) of interest taking into account the sample matrix. The test methods found in the EPA publication Test Methods for Evaluating Solid Waste. Physical/Chemical Methods (SW-846), 3rd Edition, as updated, shall be used for: the Toxicity Characteristic analytes (40 C.F.R. § 261.24); the Free Liquids Test (Method 9095) used to determine if free liquid is a component of a waste as a specific requirement for bulk and containerized wastes (40 C.F.R. § 264.314(c)); and the chemical analysis of wastes for hazardous waste incineration permits. (40 C.F.R. § 270.62(b)(2)(i)(C))
- b. The Permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports and records required by this Permit, the certification required by 40 C.F.R. § 264.73(b)(9) and records of all data used to complete the application for this Permit for a period of at least three (3) years from the date of the sample, measurement, report, certification or application. This period may be extended by request of the Regional Administrator at any time and are automatically extended during the course of any unresolved enforcement action regarding this Facility. (40 C.F.R. § 264.74) The Permittee shall maintain records from all groundwater monitoring wells and associated groundwater surface elevations for the active life of the Facility, and for disposal facilities, for the post-closure care period as well. (40 C.F.R. § 270.30(j))
- c. Records of monitoring information shall specify:
 - (1) The date, exact place, and time of sampling or measurements;
 - (2) The individual(s) who performed the sampling or measurements;
 - (3) The date(s) analyses were performed;
 - (4) The individual(s) who performed the analyses;
 - (5) The analytical techniques or methods used; and
 - (6) The results of such analyses.

9. Duty to Submit Certified Documents

a. Except for submissions for which the Permittee is asserting a business confidentiality claim pursuant to Paragraph 9.d. and e., below, one (1) hardcopy of all draft and final plans, reports, notifications or other documents which are required by this Permit to be submitted to the Regional Administrator, shall be sent Certified Mail, Return Receipt Requested, overnight mail, or hand-carried to:

Ms. Catherine McGoldrick, Project Manager c/o Associate Director U.S. EPA Region III Office of Remediation (3LC20) 1650 Arch Street Philadelphia, PA 19103-2029

One electronic copy shall be transmitted via e-mail or sent Certified Mail, Return Receipt Requested, overnight mail, or hand-carried to:

Ms. Catherine McGoldrick, Project Manager U.S. EPA Region III
Office of Remediation (3LC20)
1650 Arch Street
Philadelphia, PA 19103-2029
mcgoldrick.catherine@epa.gov

In addition, one copy of such submission shall be sent, by regular mail, to:

Waste Management Administration Hazardous Waste Program Maryland Department of the Environment 1800 Washington Blvd. Baltimore, MD 21230-1719 (410) 537 - 3344

- b. Each report, notification or other submission shall reference the Permittee's name, permit number and Facility address.
- c. All applications, reports or other information submitted to EPA shall be signed and certified as described in 40 C.F.R. §§ 270.11 and 270.30(k).
- d. The Permittee may assert a business confidentiality claim covering all or part of any information submitted to EPA pursuant to this Permit in the manner described in 40 C.F.R. § 2.203(b). Any assertion of confidentiality shall be adequately substantiated by the Permittee when the assertion is made in accordance with 40

C.F.R. § 2.204(e)(4). Information subject to a confidentiality claim shall be disclosed only to the extent allowed by, and in accordance with, the procedures set forth in 40 C.F.R. Part 2, Subpart B. If no such confidentiality claim accompanies the information when it is submitted to EPA, it may be made available to the public by EPA without further notice to the Permittee. The Permittee shall not assert any confidentiality claim with regard to any physical, sampling, monitoring, or analytical data.

e. One hardcopy of all submissions for which the Permittee is asserting a business confidentiality claim pursuant to Paragraph 9.d, above, shall be sent Certified Mail, Return Receipt Requested, overnight mail, or hand-carried to:

Office of Remediation (3LC20) EPA Region III 1650 Arch Street Philadelphia, Pennsylvania 19103

10. Duty to Maintain Documents at the Facility

Pursuant to 40 C.F.R. § 264.73, the Permittee shall maintain at the Facility (or other location approved by the Regional Administrator) during the term of this Permit, including any reissued permit, all documents and raw data, such as laboratory reports, drilling logs, and other supporting information generated from investigations required by this permit including amendments, revisions and modifications to these documents.

11. Duty to Minimize Waste

The Permittee shall certify no less often than annually that the Permittee has a program in place to reduce the volume and toxicity of hazardous waste that the Permittee generates to the degree determined by the Permittee to be economically practicable; and the proposed method of treatment, storage or disposal is the practicable method currently available to the Permittee which minimizes the present and future threat to human health and the environment. The Permittee shall maintain each such certification of waste minimization at the Facility until closure of such Facility. (40 C.F.R. § 264.73(b)(9))

12. Duty to Comply with the Land Disposal Restrictions

All activities of the Permittee which involve the land disposal of hazardous waste are subject to the provisions of RCRA § 3004(b)-(m), 42 U.S.C. § 6924(b)-(m), and applicable regulations thereunder at 40 C.F.R. Part 268.

13. Reporting Requirements

a. Planned Changes

The Permittee shall give notice to the Regional Administrator, as soon as possible, of any planned physical alterations or additions to the Facility. (40 C.F.R. § 270.30(l)(1))

b. Anticipated Noncompliance

The Permittee shall give advance notice to the Regional Administrator of any planned changes in the Facility or activity which may result in noncompliance with permit requirements. (40 C.F.R. § 270.30(1)(2))

c. Monitoring Reports

Monitoring reports shall be reported at the intervals specified elsewhere in this Permit. (40 C.F.R. § 270.30(1)(4))

d. Noncompliance with Schedules for Interim and Final Requirements

Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this Permit shall be submitted no later than fourteen (14) days following each schedule date. (40 C.F.R. § 270.30(1)(5))

e. Twenty-four Hour Reporting

The Permittee shall report to the Regional Administrator any noncompliance which may endanger health or the environment within 24 hours from the time the Permittee becomes aware of the circumstances. The report shall contain the information listed in 40 C.F.R. § 270.30(l)(6).

f. Manifest Discrepancy Report

If a significant discrepancy in a manifest is discovered, the Permittee must attempt to reconcile the discrepancy. If not resolved within fifteen (15) days, the Permittee shall submit a letter report including a copy of the manifest, to the Regional Administrator. (40 C.F.R. § 270.30(1)(7))

g. Unmanifested Waste Report

The Permittee shall submit a report to the Regional Administrator within 15 days of receipt of unmanifested waste. (40 C.F.R. § 270.30(1)(8))

h. Biennial Report

The Permittee shall submit a biennial report covering Facility activities during odd numbered calendar years. (40 C.F.R. § 270.30(1)(9))

i. Other Noncompliance

The Permittee shall report all other instances of noncompliance not otherwise required to be reported above, at the time monitoring reports are submitted. The reports shall contain the information listed in 40 C.F.R. § 270.30(1)(6). (40 C.F.R. § 270.30(1)(10))

j. Failure to Submit Relevant and/or Accurate Information

Whenever the Permittee becomes aware that it failed to submit any relevant facts in the permit application, or submitted incorrect information in a permit application or in any report to the Regional Administrator, the Permittee shall notify the Regional Administrator of such failure within seven (7) days of becoming aware of such deficiency or inaccuracy. The Permittee shall submit the correct or additional information to the Regional Administrator within thirty (30) days of becoming aware of the deficiency or inaccuracy (40 C.F.R. § 270.30(1)(11)). Failure to submit the information required in this Permit or misrepresentation of any submitted information is grounds for termination of this Permit. (40 C.F.R. § 270.43)

C. APPROVAL OF SUBMISSIONS; INCORPORATION INTO PERMIT

All plans, reports, schedules, and other submissions required by the terms of this Corrective Action Permit are, upon approval by EPA, incorporated into this Corrective Action Permit. Any noncompliance with such approved schedules, plans, reports, or other submissions shall be deemed noncompliance with this Corrective Action Permit. In the event of unforeseen circumstances beyond the control of the Permittee which could not be overcome by due diligence, the Permittee may request a change, subject to EPA approval, in the previously approved plans, reports, schedules or other submissions. This request may result in a modification of the Corrective Action Permit.

D. DISPUTE RESOLUTION

Except as otherwise provided in this Permit in the event the Permittee disagrees, in whole or in part, with EPA disapproval of any submission required by this Permit, the Permittee shall notify EPA in writing of its objections, and the basis therefore, within twenty-one (21) days of receipt of EPA's disapproval.

Such notice shall set forth the specific matters in dispute, the basis for the Permittee's

belief that its position is consistent with the permit requirements, and any supporting documentation.

EPA and the Permittee shall have an additional twenty-one (21) days from EPA receipt of the notification to meet or confer to resolve any dispute. In the event agreement is reached, the Permittee shall submit the revised submission and implement the same in accordance with such agreement.

In the event EPA and the Permittee are not able to reach agreement within this twenty-one (21)-day period, the Permittee shall have the opportunity to submit written comments regarding EPA's disapproval, and receive a written decision from the EPA Regional Administrator or his delegate (e.g., the Division Director or the Office Director) regarding the Permittee's objection. EPA will notify the Permittee in writing of its decision and the Permittee shall comply with the terms and conditions of EPA's decision. The Permittee does not waive its right to assert any and all available defenses in a proceeding to enforce this permit, nor does it waive any statutory or regulatory rights it may have, if any, to affirmatively challenge EPA's decision in the dispute.

E. EFFECT OF PERMIT

- 1. This Permit authorizes only the management of hazardous waste expressly described in this Permit and does not authorize any other management of hazardous waste.
- 2. Issuance of this Permit does not convey property rights of any sort or any exclusive privilege, nor does it authorize any injury to persons or property, or invasion of other private rights, or any infringement of State or local laws or regulations. (40 C.F.R. §§ 270.30(g) and 270.4(b) and (c)). Compliance with this Permit during its term constitutes compliance with Subtitle C of RCRA, except for those requirements not included in the Permit which are described in 40 C.F.R. § 270.4(a)(1)(i)-(iv). However, compliance with the terms of this Permit does not constitute a defense to any action brought under Section 7003 of RCRA, 42 U.S.C. § 6973, Section 106(a) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended 42 U.S.C. §9606(a) (commonly known as Superfund), or any other law governing protection of public health or welfare or the environment.
- 3. Nothing contained herein shall in any way be deemed to waive the Permittee's obligation to comply with 40 C.F.R. Part 270, Subpart C, and applicable regulations set forth at 40 C.F.R. Part 124.

F. MODIFICATION, REVOCATION AND REISSUANCE

- 1. This Permit may be modified, revoked and reissued, or terminated for cause. This Permit is based on information provided to EPA by the Permittee and MDE. Section 3005(c)(3) of RCRA provides EPA the authority to review and amend the Permit at any time. Any inaccuracies found in the information submitted by the Permittee may be grounds for the termination, modification or revocation and reissuance of this Permit (see 40 C.F.R. §§ 270.41, 270.42 and 270.43). The Permittee must inform EPA of any deviation from or changes in the Permittee-submitted information that would affect the Permittee's ability to comply with the applicable statutes, regulations or permit conditions.
- 2. In the event that information becomes available to EPA identifying solid waste management units that require corrective measures, EPA will modify this Corrective Action Permit. This paragraph does not limit EPA's authority to otherwise modify this Corrective Action Permit in accordance with 40 C.F.R. Part 270, Subpart D.

G. TRANSFER OF PERMIT

- 1. This Corrective Action Permit is not transferable to any person, except after notice to EPA (40 C.F.R. § 270.30(1)(3)). This Corrective Action Permit may be transferred by the Permittee to a new owner or operator only if the Corrective Action Permit has been modified or revoked and reissued under 40 C.F.R. § 270.40(b) or 270.42(b)(2) to identify the new permittee and incorporate such other requirements as may be necessary under the appropriate Act. (40 C.F.R. § 270.40) The Regional Administrator may require modification or revocation and reissuance of the Permit to change the name of the Permittee and incorporate such other requirements as may be necessary under RCRA. (40 C.F.R. § 270.30(1)(3))
- 2. Before transferring ownership or operation of the Facility during its operating life, the Permittee transferring its interest in the Facility shall notify the new owner or operator in writing of the requirements of 40 C.F.R. Parts 264 and 270. (40 C.F.R. § 264.12(c))

H. PERMIT EXPIRATION AND CONTINUANCE

1. Pursuant to 40 C.F.R. § 270.50, this Permit shall be effective for a fixed term not to exceed ten years. Pursuant to 40 C.F.R. § 270.51, this Permit and all conditions herein will remain in effect beyond the Permit's expiration date if the Permittee has submitted a timely and complete application for a new permit (see 40 C.F.R. §§ 270.10 and 270.13 - 270.29) and, through no fault of the Permittee, the Director has not issued a new permit under 40 C.F.R. § 124.15 on or before the expiration date of this permit. In addition, each permit for a land disposal facility shall be reviewed by the Regional Administrator five years after the date of permit issuance or reissuance and shall be modified as necessary, as provided in 40 C.F.R.§ 270.41 (40 C.F.R. § 270.50(d)).

- 2. If the Permittee wishes to continue an activity regulated by this Permit after the expiration date of this Permit, the Permittee must submit a complete application for a new permit at least 180 days before this Permit expires, unless permission for a later date has been granted by the Regional Administrator (40 C.F.R. §§ 270.10(h) and 270.30(b)).
- 3. The corrective action obligations contained in this Permit shall continue regardless of whether the Permittee continues to operate or ceases operation and closes the Facility. The Permittee is obligated to complete Facility-wide corrective action under the conditions of a RCRA permit regardless of the operational status of the Facility. The Permittee must submit an application for a new permit at least one hundred eighty (180) days before this Permit expires pursuant to 40 C.F.R. § 270.10(h), unless the Permit has been modified to terminate the corrective action schedule of compliance and the Permittee has been released from the requirements for financial assurance for corrective action.

I. SEVERABILITY

The provisions of this Permit are severable, and if any provision of this Permit or the application of any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this Permit shall not be affected thereby. (40 C.F.R. § 124.16(a)(2))

PART II – SPECIFIC FACILITY CONDITIONS

- A. CORRECTIVE ACTION FOR CONTINUING RELEASES; PROTECTION OF HUMAN HEALTH AND THE ENVIRONMENT
- 1. Section 3004(u) of RCRA, 42 U.S.C. § 6924(u), and regulations codified at 40 C.F.R. § 264.101, provide that all permits issued after November 8, 1984 must require corrective action as necessary to protect human health and the environment for all releases of hazardous waste or hazardous constituents from any solid waste management unit (SWMU), regardless of when waste was placed in the unit.
- 2. Under Section 3004(v) of RCRA, 42 U.S.C. § 6924(v), and 40 C.F.R. § 264.101(c), EPA may require that corrective action at a permitted facility be taken beyond the facility boundary where necessary to protect human health and the environment, unless the owner or operator of the facility concerned demonstrates to the satisfaction of EPA that, despite the owner or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such action.
- 3. Section 3005(c)(3) of RCRA, 42 U.S.C. § 6925(c)(3), and 40 C.F.R. § 270.32(b) provide that each permit shall contain such terms and conditions as EPA determines necessary to protect human health and the environment.

B. REMEDY IMPLEMENTATION

- 1. On September 14, 2006, EPA selected a Final Remedy for the Facility in a Final Decision and Response to Comments under RCRA Section 3004(u) (FDRTC). The First Permit Modification incorporates the Final Remedy and provides for its implementation pursuant to 40 C.F.R. § 270.41. Subsequently in 2014, EPA approved the temporary (eighteen (18) month) shutdown of the groundwater recovery and treatment system as part of the Interim Monitoring Plan to assess changes in site groundwater conditions during the discontinuation of the groundwater extraction/treatment at the Facility. The temporary shutdown also allowed evaluation of the appropriateness of transitioning to a monitoring only program. Data collected during the eighteen (18) month Interim Monitoring Plan demonstrated that monitoring only may be an appropriate remedy for Facility and the operation of the pump and treat system in this area may no longer be warranted.
- 2. Commencing on the effective date of this Permit and thereafter, the Permittee shall implement the corrective actions at the Facility as follows:
 - a. The Permittee shall continue to implement a Facility-wide groundwater monitoring program in accordance with the Sampling and Reporting Plan, approved by EPA on February 13, 2017 and included herein as Attachment B. The Permittee may propose in writing to terminate or modify the Facility-wide groundwater monitoring program if sampling rounds show that Groundwater Cleanup Standards have been achieved.
 - b. The Permittee shall continue to implement the Facility-wide groundwater monitoring program until EPA provides prior-written approval that such program may be terminated or issues a written determination outlining necessary or appropriate alternative sampling and reporting requirements or corrective actions and the reasons therefor.
 - c. The Permittee shall abide by the Title Notice prohibition as set forth within Attachment B, which includes groundwater use restrictions prohibiting the development of onsite wells at the Facility for drinking water or other domestic uses. The Title Notice shall remain in effect for as long as necessary to minimize potential exposure and until EPA provides prior-written approval that such Title Notice may be terminated.

C. FINANCIAL ASSURANCE

- 1. Within 30 days of the effective day of this Permit, the Permittee shall provide assurances of financial responsibility for completing the Final Remedy as required by Section 3004(u) of RCRA, 42 U.S.C. § 6924(u).
- 2. Permittee shall annually adjust the Cost Estimate for inflation and for changes in the corrective actions required under Part II "Remedy Implementation" until such corrective actions are completed. By January 31st of each year, Permittee shall submit each annual Cost Estimate to EPA for review.

- 3. By March 31st of each year, the Permittee shall demonstrate compliance with financial assurance to EPA in accordance with 40 C.F.R. § 264.143 for completing the Final Remedy in accordance with 40 C.F.R. § 264.101(b). Within thirty (30) calendar days of approval of any revised cost estimate and the draft financial assurance instruments, the Permittee shall demonstrate to EPA financial assurance for the updated cost estimates.
- 4. Permittee's inability or failure to establish or maintain financial assurance for completion of the Final Remedy shall in no way excuse performance of any other requirements of this Permit.

D. EMERGENCY RESPONSE, RELEASE REPORTING

1. Emergencies

If, at any time during the term of this permit, the Permittee discovers that a release of hazardous waste or hazardous constituents at or from the Facility is presenting or may present an imminent and substantial endangerment to human health or the environment, the Permittee shall:

- a. Notify EPA as soon as practicable of the source, nature, extent, location and amount of such release, the endangerment posed by such release and the actions taken and/or to be taken, to the extent known, to address such release. Such notification shall be confirmed in writing within three (3) calendar days of discovery of such release; and
- b. Unless otherwise directed by EPA, immediately take such actions as are necessary and appropriate to address such release.

E. GUIDANCE DOCUMENTS

All work to be performed at the Facility pursuant to this Permit shall be in general accordance with applicable EPA RCRA corrective action guidance available at: https://www.epa.gov/hwcorrectiveactionsites/corrective-action-resources-specific-epas-region-3

F. RECORDKEEPING

Upon completion of closure of any current or future SWMU, the Permittee shall maintain in the Facility operating record, documentation of the closure measures taken.

G. ACCESS FOR CORRECTIVE ACTION OVERSIGHT

EPA and its authorized representatives shall have access to the Facility at all reasonable times for the purpose of monitoring compliance with the provisions of this Corrective Action Permit. The Permittee shall use best efforts to obtain access to property beyond the boundaries of the Facility, if needed, for: (1) itself and any contractor of the Permittee for the purpose complying with the provisions of this Corrective Action Permit; and (2) EPA and its authorized representatives for the purpose of monitoring compliance with the provisions of this Corrective Action Permit. Best efforts shall include, but not be limited to, agreement to reasonable conditions for access and/or the payment of reasonable fees.

H. EFFECTIVE DATE

This Corrective Action Permit is effective on 6/14/2018 and shall remain in effect until unless revoked and reissued, modified, or terminated in accordance with 40 C.F.R. § 270.41, 270.42 and 270.43 or continued in accordance with 40 C.F.R. § 270.51(a).

INTRODUCTION

W. R. Grace & Co.-Conn. (Grace) is implementing a Resource Conservation and Recovery Act (RCRA) Corrective Action project (Corrective Action Permit No. MDD 07-493-3961 [the Permit]) at the approximately 108-acre facility located at 7500 Grace Drive, Columbia, MD (the Facility). The RCRA Site is an approximately 62-acre portion of the Facility as shown in Figure "A-2015". The Facility is the current location of Grace's corporate headquarters.

Background information regarding the Grace property, regulatory measures, and previous investigations are summarized in the *RCRA Facility Investigation / Corrective Measures Study - Final Draft Report* (O'Brien & Gere Engineers, Inc., February 1999). Key historical cleanup activities included:

- 1. Excavation and off-site disposal of soil and debris at the Former Landfill Area (Solid Waste Management Unit [SWMU] 1), an action completed in 1984; and
- 2. Soil vapor extraction in the vicinity of Building 16 within the Main Site Area (SWMU 2), completed in 1996.

Groundwater pump and treat operations in the Main Site Area and groundwater monitoring in the Former Landfill Area have since been conducted under the Permit. The Permit set forth these corrective measures and the clean-up standards for groundwater constituents of concern (COCs), as follows:

Table 1 - Site Constituents of Concern and Their Maximum Contaminant Level

Constituent	Maximum Contaminant Level (ug/L)
Trichloroethene (TCE)	5
1,1-dichloroethene (1,1-DCE)	7
1,1,1-trichloroethane (1,1,1-TCA)	200
trans-1,2-dichloroethene (trans-1,2-DCE)	100
Tetrachloroethene (PCE)	5
1,1,2,2-tetrachloroethane (PCA)	Not Applicable
Vinyl Chloride	2

The pump and treat and groundwater monitoring actions were implemented in accordance with the *Corrective Measures Implementation (CMI) Work Plan* (O'Brien & Gere, 2008) as approved by the United States Environmental Protection Agency (USEPA) in June 2008. The CMI Work Plan included the procedures for groundwater and surface water sampling and analysis; groundwater elevation monitoring; remediation system operation, inspections, and sampling; and reporting.

In April 2014, USEPA approved a request from Grace to shut-down the groundwater extraction remediation system based on an analysis of site conditions. The USEPA approval was conditioned on implementation of an Interim Monitoring Plan (IMP) that monitored groundwater conditions with time. The IMP was approved by USEPA in June 2014. At the conclusion of the IMP implementation period the USEPA agreed that: the remedy of

¹ The Site definition was revised to that shown in the referenced figure through the Second Permit Modification to the HSWA Corrective Action Permit (ID No. MDD074933961) issued November 18, 2015 and effective January 1, 2016.

W.R. GRACE & CO.-CONN., COLUMBIA, MD | SAMPLING AND REPORTING PLAN

pump and treat system in the Main Site Area has been successful and shutdown of the system has not caused a rebound in site COCs; that there is no risk to receptors from site COCs in the groundwater beneath the Former Landfill Area; and that monitoring of groundwater conditions and institutional controls is the appropriate remedy.

This Sampling and Reporting Plan presents the planned continued monitoring of groundwater quality and institutional controls at the site; including the methodology, sample schedule, and reporting requirements.

SAMPLING AND ANALYSIS PLAN

The objective of the ongoing corrective measures is to monitor groundwater quality until the cleanup standards have been achieved. Groundwater and surface water will be monitored to gather groundwater head/elevation data and COC concentrations of sufficient quality to enable groundwater flow to be detailed and trends in concentrations evaluated.

A network of six monitoring wells remains at the Main Site for the purpose of groundwater monitoring and sample collection. The wells monitor both the overburden and bedrock groundwater conditions and are summarized on Table 2 below and illustrated on Figure 1 (attached). Available well logs are provided in Appendix A.

Table 2 - Summary of Main Site Area Monitoring Wells

Well #	Well depth in feet below grade	Aquifer
MW5	300	bedrock
MW8	63	overburden
MW18	206	bedrock
MW22	300	bedrock
MW25	280	bedrock
MW26	130	bedrock

A network of nine monitoring wells remains at the Former Landfill Area for the purpose of groundwater monitoring and sample collection. The wells monitor both the overburden and bedrock groundwater conditions and are summarized on Table 3 below and illustrated on Figure 1. Available well logs are provided in Appendix A.

Table 3 - Summary of Former Landfill Area Monitoring Wells

Well #	Well depth in feet below grade	Aquifer
MW12	148	bedrock
MW15	205	bedrock
MW19	48	overburden
MW1407	29	overburden
MW1408	25	overburden
MW2182	61	bedrock
MW2235	38	overburden
MW20	203	bedrock
MW21	48	overburden

Consistent with the objectives of the corrective measures, sampling of groundwater monitoring wells and selected surface water sampling locations will be conducted every fifteen months. A sample interval of this timeframe will allow representation of seasonal effects every five years. This Sampling Program will include the measurement of groundwater depths at the remaining nine monitoring wells at the Former Landfill Area and the six monitoring wells at the Main Site. Once depth to groundwater measurements have been obtained, groundwater samples will be collected from three monitoring wells at the Main Site Area and eight groundwater monitoring wells at the Former Landfill Area; in addition, two surface water samples will be collected from locations (one at the Main Site Stream [SWS 24] and one at the Former Landfill Area stream [SWS 29]) as presented in Table 4 below.

Table 4 - List of Monitoring Wells included in Sampling and Analysis Program

Former Landfill Well #	Main Site Well #	Surface Water Location
MW12	MW5	SWS 24
MW15	MW8	SWS 29
MW19	MW18	
MW1407		
MW1408		
MW2182		
MW2235		
MW20		

Historical data from remaining wells and the two surface water locations are presented in tables (Table B-1 for Main Site data and Table B-2 for Former Landfill Area data) presented in Appendix B.

SAMPLING PROCEDURES

Passive diffusion sampling bags have been utilized at the Grace facility since September 2001 to collect groundwater samples from monitoring wells to be analyzed for volatile organic compounds (VOCs). The diffusion sampling bags utilized at the site will be one inch in diameter and two-feet in length. Diffusion bags will be prefilled by the laboratory and shipped inside a Mylar pouch that acts as a moisture and oxygen barrier. For each well to be sampled, the diffusion bag will be installed at the predetermined depth utilizing a diffusion hanging apparatus made entirely of stainless steel and consisting of a line, carabiners, a weight, and a locking clip. Diffusion apparatus will be dedicated to individual wells, to eliminate the possibility of cross contamination from the apparatus between wells. Each bag will be left in place for a minimum of three weeks, during which time VOCs present in formation water, if any, will equilibrate with the water contained in the diffusion bag. Table 5, below, summarizes the identified fracture zones and diffusion bag depths for the Grace site.

Table 5 - Summary of Fracture Zones and Diffusion Sample Bag Depth

Well # Total Well Depth (ftbg)		Fracture/Water Bearing Zone Depth (ftbg)	Depth of Top of Diffusion Bag (ftbg)	
MW5	300	67	66	
MW8	63	36-56*	42	
MW12	148	128-140	133	
MW15	203	177-177.5	176	
MW18	206	184-185	183.5	
MW19	48	40-48*	42	
MW20	203	197-198	196.5	
MW21	48	40-42*	40#	
MW22	300	285-287	285#	
MW25	280	260-270	264#	
MW26	130	55	54#	
MW1407	29	26*	25	
MW1408	25	23*	22	
MW2235	38	31*	30	
MW2182	65	55-60	57	

ftbg Indicates feet below grade

PROCUREMENT OF EQUIPMENT

Diffusion bag hanging apparatus, dedicated to each well, have been purchased from ALS Environmental (ALS) in Houston, Texas. The hanging apparatus were assembled by ALS at their facility. Each apparatus is equipped with a locking plastic clip at the selected length to provide accurate placement of the diffusion bag within the well. If new hanging apparatus are required they will come secured in a plastic bag, ready for installation.

Diffusion sample bags will also be purchased from ALS. The diffusion sample bags will be filled with de-ionized water by ALS at their facility, and shipped to OBG in Mylar pouches. Diffusion sample bags will remain in the Mylar pouch until installation in the well.

INSTALLATION OF DIFFUSION BAGS

The following procedures will be implemented for installation of diffusion sample bags.

- 1. Don a new pair of nitrile gloves.
- 2. Open well and gauge depth to groundwater using a decontaminated electronic probe capable of measuring water levels to the nearest 0.01ft.
- 3. Remove diffusion hanging apparatus from inside well.

indicates well is screened in the unconfined, overburden shallow aquifer, and therefore, the hydraulic interval is not a water-bearing fracture.

[#] Indicates well is not included in sampling program; Depth noted is placement depth during prior sampling programs.

- 4. Verify that depth of top of diffusion bag placement will be deeper than the depth to water reading.
- 5. Don a new pair of nitrile gloves.
- 6. Open Mylar pouch containing diffusion bag, immediately install diffusion bag onto apparatus utilizing locking clips set at predetermined depth.
- 7. Carefully lower the diffusion apparatus into the well taking care to prevent chafing on sides of well casing.
- 8. Lock diffusion apparatus at correct depth by aligning white depth marker with top of casing at well. Close and lock well with white depth marker at the top of casing.
- 9. Record information in field book, including any notes on apparatus condition (i.e. wire has become frayed recommend replacement prior to next sampling event, etc.).
- 10. Repeat procedure at each well.

DIFFUSION BAG SAMPLE COLLECTION

The following procedures will be implemented for collection of groundwater samples from the diffusion sample bags:

- 1. Allow a minimum of three weeks from date of diffusion bag installation before sample collection.
- 2. Don a new pair of nitrile gloves.
- 3. Carefully remove diffusion hanging apparatus from well taking care to prevent chafing on sides of well casing.
- 4. Carefully cut a small slit into the diffusion bag utilizing a stainless steel razor blade or scissor.
- 5. Fill appropriate number of sample containers taking care to minimize headspace.
- 6. Immediately place filled and properly labeled VOC vials into ice filled cooler.
- 7. Measure pH, temperature, specific conductivity, dissolved oxygen, and oxygen reduction potential (ORP) directly from within the well using a YSI multi-parameter meter and record measurements in field book.
- 8. Return remaining water, if any, from diffusion bag back to the well and dispose used diffusion bag.
- 9. Return diffusion apparatus into well
- 10. Close and lock well
- 11. Ship cooler(s) to lab under chain-of-custody for analysis of VOCs by USEPA Method 624.

SURFACE WATER SAMPLING

Surface water samples will be collected to evaluate surface water condition discharging from the Site. Surface water samples will be collected from established sampling points following procedures outlined below:

- 1. Don a new pair of nitrile gloves.
- 2. Enter streambed downgradient of sample location, facing upstream, to minimize the introduction of disturbed sediment to the sample.
- 3. Facing upstream, fill appropriate sample containers directly from stream flow in area of visible flow (not stagnant). Take care to minimize headspace and not to overfill the sample container and thus dilute the preservative.
- 4. Obtain aliquot of water to measure and record pH, temperature, and specific conductivity.
- 5. Ship cooler(s) to lab under chain-of-custody for analysis of VOCs by USEPA Method 624.

QUALITY ASSURANCE/QUALITY CONTROL SAMPLING

In order to evaluate data quality characteristics of precision, accuracy, representativeness, completeness and comparability quality assurance/quality control (QA/QC) sampling will be obtained. QA/QC samples include the

W.R. GRACE & CO.-CONN., COLUMBIA, MD | SAMPLING AND REPORTING PLAN

collection and analysis of a matrix spike (MS), matrix spike duplicate (MSD), and duplicate. QA/QC samples will be collected at the rate of one per sample event.

A trip blank will be included in each cooler that transports VOC samples. The trip blank is provided by the laboratory and remains with the cooler throughout the sampling event. A field blank is not necessary during this program as sampling equipment is dedicated and cross contamination through handling and improper decontamination is not expected.

Prior to use, meters will be calibrated in accordance with manufacturers' procedures. Meters to measure pH will be calibrated to 4.0 and 7.0 buffers.

SAMPLE HANDLING AND MANAGEMENT

Sample containers should only be handled while donning a clean, dedicated pair of nitrile gloves. Groundwater and surface water samples will be analyzed for VOCs by USEPA Method 624. Groundwater will be collected in 40 mL glass vials provided by the laboratory with appropriate labeling. Each vial will be preserved in the laboratory with hydrochloric acid (HCl) to a pH less than 2 (S.U.). Filled vials will be secured with minimum headspace and placed in chilled coolers for shipment. Samples will be shipped to Eurofins Lancaster Laboratory in Lancaster PA. Shipment coolers will be preserved with ice to 4°C. Samples will remain chilled to 4°C until time of analysis. Samples must be analyzed by the laboratory within fourteen days of sample collection (sample holding time).

INVESTIGATION DERIVED WASTES

Investigation derived wastes (IDW) will be limited to personal protection equipment (PPE), such as nitrile gloves, plastic bags from the diffusion bags and paper towels. Water level probes will be decontaminated using paper towels moistened with dissolved Alconox (non-phosphate detergent) followed by a distilled water rinse, discharged to ground. Solid IDW, such as nitrile gloves, plastic bags and paper towels will be disposed of through the on-site solid waste management and disposal program.

OBG | JANUARY 2017

INSTITUTIONAL CONTROLS

Groundwater at the site is subject to a use restriction within the boundary shown on Figure A-2015. No on-site wells may be installed or used in the Restriction Area for drinking water or other domestic uses to the extent and for as long as necessary to prevent exposure while the plume is being remediated. The use restriction was filed with the Land Records of Howard County in 2008 (see Exhibit 1).

On an annual basis while COCs are present above clean-up criteria in the monitoring well network, Grace will confirm that the groundwater use restriction is available at the Recorder's Office and that wells have not been installed within the Groundwater Use Restriction Area.

REPORTING

Grace will report to the USEPA annually. Copies of the reports will be provided to Maryland Department of the Environment (MDE) and Howard County. For those years which sampling is not conducted, the report will consist of a review of the institutional controls. For years when sampling is conducted, the reports will include the following information, as appropriate:

- A description of the efforts, and results of same, to confirm that the use restriction is available at the Recorder's Office and that no wells have been installed for drinking water or other domestic uses within the Groundwater Use Restriction Area;
- Groundwater contour map for a) overburden flow regime of Former Landfill Area; b) bedrock flow regime for Former Landfill Area; c) bedrock flow regime for Main Site;
- Laboratory Analytical results and tabular summary;
- Trend graphs of COCs versus time;
- Recommendations, as appropriate based on the data, to revise the sampling program.

KEY PERSONNEL

Table 6, below, provides the organization and contact information for the facility's RCRA Corrective Action program, as well as individual responsibilities.

Table 6 - Summary of Key Personnel, Contact Information, and Responsibilities

Name	Title	Organization	Contact Information	Responsibility
Paul Bucens, PE	Project Manager	W.R. Grace	617-899-0354	Remediation Project Manager. Oversees and directs remediation project; Primary point of contact; responsible for compliance with RCRA Permit. Reviews and approves reports.
Tina Bickerstaff, CPG	Managing Scientist	OBG	301-731-1157	Contractor Project Manager. Project consultant point of contact. Oversees and directs sampling and analysis; reporting.
Erich Weissbart, PG	Project Manager	USEPA	410-305-2779	RCRA Project Manager. Reviews and approves reports; confirms project deliverables and schedules are compliant with the RCRA Permit.
Ed Hammerberg	Resource Management Program	MDE	410-537-3356	Administrates the State hazardous waste program. Receives copies of reports issued under the RCRA Permit.
Niti Blackwell	Engineering Specialist III	Howard County Bureau of Environmental Services	410-313-6418	Howard County point of contact. Receives copies of reports issued under the RCRA Permit.

Main Site Area

Summary of Groundwater & Surface Water Analytical Results (in ug/l) For Remaining Wells/Locations

```
Notes:
             Analyses - USEPA Method 601/602. Beginning Fall 2004, USEPA Method 624 utilized.
             Trace concentrations of infrequently detected compounds not included in this table, but noted below.
             MW__ = monitoring well; SWS-__ = surface water sample location
             TCF = trichloroethene
             1,1,2,2-PCA = 1,1,2,2-tetrachloroethane
             1.1-DCE = 1.1-dichloroethene
             1 1 1-TCA = 1 1 1-trichloroethane
             1,2-DCE = 1,2-dichloroethene
             "-" = not analyzed (in the case of early analyses of 1,2-DCE isomers, or not previously detected
Superscripts:
             3- also detected 1,2-dichloroethane
                          in MW8 (3/17/98) concentration = 3ug/L
                          in MW8 (3/21/01) concentration = 1 ug/L
                          in MW8 (3/27/02) concentration = 1 ug/L
             4- also detected benzene
                          in MW5 (3/10/99) concentration = 6 ug/L
                          in MW22 (3/18/99) concentration = 6 ug/L (<1 ug/L in duplicate sample)
                          in MW26 (3/18/99) concentration = 4 ug/L
                          in MW26 (3/27/01) concentration = 1 ug/L
             6- also detected chloroform
                          in MW8 (3/17/98) concentration = 2ug/L (lab contam)
                          in MW8 (3/00) concentration = 1ug/L
                          in MW8 (3/27/02) concentration = 1 ug/L
                          in MW8 (9/17/02) concentration = 1 µg/l
                          in MW8 (8/20/08) concentration = 1.01 ug/L
                          in MW8 (5/14/09) concentration = 1.86 ug/L
                          in MW8 (4/1/10) concentration = 2.49 ug/L
                          in MW8 (12/3/10) concentration = 1.6 ug/L
                          in MW8 (8/24/11) concentration = 3.1 ug/L
                          in MW8 (5/19/12) concentration = 1.5 ug/L
                          in MW22 (8/20/08) concentration = 1.19 ug/L
                          in MW22 (4/1/10) concentration = 1.25 ug/L
                          in MW22 (12/3/10) concentration = 1.5 ug/L
                          in MW22 (8/24/11) concentration = 1.5 ug/L
                          in MW26 (3/00) concentration = 2 ug/L
                          in MW22 (3/2/13) concentration = 2 ug/l
                          in MW8 (11/26/13) concentration = 2 ug/l
                          in MW5 (11/26/13) concentration = 1 ug/l
                          in MW22 (11/26/13) concentration = 2 ug/l
                          in MW8 (8/27/14) concentration = 2 ug/l
                          in MW22 (8/27/14) concentration = 2 ug/l
                          in MW22 (3/03/15) concentration = 3 ug/l
                          in MW8 (6/28/15) concentration = 1 ug/l
                          in MW22 (6/28/15) concentration = 2 ug/l
                          in MW5 (11/30/15) concentration = 1 ug/l
                          in MW22 (11/30/15) concentration = 3 ug/l
                          in MW5 (2/29/16) concentration = 0.5 ug/l
                          in MW8 (2/29/16) concentration = 2 ug/l
                          in MW22 (2/29/16) concentration = 3ug/l
             8 - also detected chloroethane
                          in MW5 (9/17/02) concentration = 10 ug/L
                          in MW22 (9/17/02) concentration = 5 ug/L
             9 - Special note for 5 Year Remediation Site Evaluation - August 2008
                          At request of USEPA, three depths were sampled for MW8
                          MW8-1 depth = 38 ft bg: TCE = 6.0 ug/L; no other VOCs detected
                          MW8-2 depth = 42 ft bg: TCE = 9.25 ug/L; no other VOCs detected
```

MW8-3 depth = 50ft bg: TCE = 16.4 ug/L; Cis1,2-DCE = 1.86 ug/L; no other VOCs detected, as presented on Table 4-1

10 - Special note for 8/25/15 - Passive Diffusion Bag could not be retrieved from well, no sample obtained.

TABLE B-2 Notes

W. R. Grace & Co.-Conn, Washington Research Center, Columbia, MD

Former Landfill Area

Summary of Groundwater & Surface Water Analytical Results (in ug/l)
For Remaining Wells/Locations

Notes: Analyses - USEPA Method 601/602. Beginning Fall 2004, USEPA Method 624 utilized.

Trace concentrations of infrequently detected compounds not included in this table, but noted below.

MW__ = monitoring well; SWS-__ = surface water sample location

MW19 serves as a replacement for the damaged MW13 (since 1995)

TCE = trichloroethene

PCE = tetrachloroethene (or perchloroethene)

1,1,2,2-PCA = 1,1,2,2-tetrachloroethane

1,1-DCE = 1,1-dichloroethene

1.1.1-TCA = 1.1.1-trichloroethane

1.2-DCE = 1.2-dichloroethene

1.1-DCA = 1.1-Dichloroethane

- = not analyzed (in the case of earlier analyses of the 1,2-DCE isomers), or not previously detected

* = stream dry, no sample collected

Superscripts

1- also detected 1,1-DCA

MW12 (9/24/99) concentration = 2 ug/L

MW12 (9/00) concentration = 2 ug/l

MW12 (3/22/01) concentration = 2 ug/l

MW12 (9/21/01) concentration = 1ug/l

MW15 (3/10/98) concentration = 2 ug/L

MW15 (10/16/98) concentration = 2 ug/L

MW15 (3/9/99) concentration = 3 ug/L

MW15 (9/24/99) concentration = 1 ug/L

MW15 (3/00) concentration = 1ug/l

MW20 (10/15/98) concentration = 1 ug/l

MW20 (9/24/99) concentration = 2 ug/L

MW20 (3/19/01) concentration = 1 ug/l

MW1408 (4/1/10) concentration = 1.11 ug/L

2- also detected 1,1,2-TCA

MW12 (9/21/01) concentration = 1ug/l

MW19 (3/95) concentration = 17 ug/L

MW19 (4/1/10) concentration = 1.05 ug/L

MW20 (9/02) concentration = 1 ug/l

MW2182 (3/11/98) concentration = 4 ug/L

MW2182 (10/15/98) concentration = 2 ug/L

MW2182 (3/10/99) concentration = 2 ug/L

MW2182 (9/00) concentration = 1 ug/l

MW2182 (10/04) concentration = 1.5ug/l MW2182 (4/05) concentration = 2.1ug/l

MW2182 (10/05) concentration = 1.57 ug/l

MW2182 (4/3/06) concentration = 1.65 ug/L

MW2182 (10/3/06) concentration = 1.30 ug/L

MW2182 (4/3/07) concentration = 1.39 ug/L

MW2182 (10/04/07) concentration = 1.25 ug/l

3- also detected Chloroform

MW12 (3/00) concentration = 2 ug/l;

MW20 (10/15/98)concentration = 1 ug/L

MW20 (9/24/99) concentration = 1 ug/l MW1408 (3/00) concentration = 51 ug/l

MW15 (2/29/16) concentration = 0.5 ug/l

4- also detected 1,2-DCA

MW12 (3/22/01) concentration = 1 ug/l

MW15 (3/10/98) concentration = 1 ug/l

5- also detected Trichlorofluoromethane

MW1407 (3/16/99) concentration = 2 ug/l

6- also detected Bromodichloromethane/Dibromochloromethane

MW1408 (3/00) concentration = 8 ug/l / 1ug/l;

7- also detected chloroethane

MW19 (9/02) concentration = 7ug/l

MW1408 (3/02) concentration = 1 ug/l

Land Records Howard County 2008

TITLE NOTICE

This Title Notice ("Notice") is made this ______ day of _______, 2008, by W. R. Grace & Co.-Conn. (the "Permittee");

WITNESSETH:

WHEREAS, Permittee is the fee simple owner of 7500 Grace Drive in Columbia, Maryland, identified on Howard County Tax Map 35 at Parcel 145 and being the property conveyed to Permittee by deed recorded in 1955 in the Land Records of Howard County, Maryland, more particularly described in Exhibit A, attached hereto, and incorporated by reference (the "Facility");

WHEREAS, the United States Environmental Protection Agency issued to Permittee a Permit under the Resource Conservation and Recovery Act as amended by the Hazardous and Solid Waste Amendments of 1984 (the "RCRA Permit") effective November 30, 2007; and

WHEREAS, the "RCRA Permit" includes a requirement at Part III.A.4. that Permittee record a notice (this Notice) to inform all successors-in-title that the Facility is subject to a RCRA Corrective Action Permit and to recite the prohibition against the development of onsite wells for drinking water or other domestic use at the Facility. The prohibition will be effective to the extent and for as long as necessary to prevent exposure while the plume referenced in the RCRA Corrective Action Permit is being remediated;

WHEREAS, the portion of the Facility for which groundwater use is to be restricted (the "Restriction Area") is depicted in Exhibit B;

) f

NOW, THEREFORE, Permittee states as follows:

Restriction of Groundwater Use: No on-site wells may be installed or used in the 1.

Restriction Area for drinking water or other domestic uses to the extent and for as long as

necessary to prevent exposure while the plume is being remediated.

2. Restriction Runs with the Land: The groundwater use restriction imposed by this

Notice shall run with the land and is binding upon all subsequent owners of the Facility.

3. Controlling Law: The interpretation and performance of this instrument shall be

governed by the laws of State of Maryland.

4. No Forfeiture: Nothing contained herein will result in a forfeiture or reversion of

Permittee's title in any respect.

5. Captions: The captions in this instrument have been inserted solely for

convenience of reference and are not a part of this instrument and shall have no effect upon

construction or interpretation.

IN WITNESS WHEREOF, Permittee has caused this Notice to be signed in its name.

W. R. Grace & Co.-Conn.
