

EMTS v5.0 Release Notes

1. Introduction

The EPA Moderated Transaction System (EMTS) version 5.0 changes are focused on system maintenance. They include an upgraded version of Java and upgrades to underlying EMTS system architecture and infrastructure.

2. User Functionality Changes

As noted above, the changes are almost exclusively related to system maintenance items. Minor modifications to the Fuels Averaging, Banking and Trading (ABT) remedial actions functions allow for the use of older credits. Additional changes improve the management of facility identifiers when registration data are synced with EMTS.

3. Release schedule

The original EMTS version 5.0 release was deployed in June 2018. Follow-up patch releases to address remaining maintenance issues were deployed in July 2018 and August 2018.
