

Proposed Amendments to Air Toxics Standards for Solvent Extraction for Vegetable Oil Production: Fact Sheet

ACTION

- On June 11, 2019, the U.S. Environmental Protection Agency (EPA) proposed amendments to the 2001 Solvent Extraction for Vegetable Oil Production National Emission Standards for Hazardous Air Pollutants (NESHAP).
- The Solvent Extraction for Vegetable Oil Production NESHAP applies to facilities that produce vegetable oil from a variety of oilseeds such as soybeans, cottonseed, rapeseed, corn germ, sunflower, safflower, peanuts and flax.
- Following a residual risk and technology review conducted under the Clean Air Act (CAA), the EPA is proposing minor amendments to:
 - Revise the startup, shutdown and malfunction language to be consistent with the most recent court decisions and propose work practices that would apply during startup periods; and
 - Require facilities to submit electronic copies of compliance reports, including performance tests.
- This action applies to emission units covered under the NESHAP, including equipment comprising the continuous process for producing crude vegetable oil and meal products, and specialty soybean products in which oil is removed from oilseeds.
- EPA will accept comment on the proposed amendments for 45 days after publication in the Federal Register.

RESIDUAL RISK ASSESSMENT

- The CAA requires EPA to assess the risk remaining after application of the final air toxics standards. This is known as a residual risk assessment.
- Based on the completed risk assessment, available health information and associated uncertainties, EPA determined risks from the vegetable oil production sector to be acceptable and provide an ample margin of safety to protect public health.
- The maximum individual cancer risk for inhalation for the source category is estimated to be less than 1-in-1 million.

TECHNOLOGY REVIEW

- The CAA requires EPA to assess, review and revise air toxics standards as necessary, taking into account developments in practices, processes and control technologies since the standards were first issued.
- The technology assessment for vegetable oil production did not identify any technological developments to reduce emissions of HAP.

BACKGROUND

- The CAA requires EPA to regulate toxic air pollutants, also known as air toxics, from categories of industrial facilities in two phases.
- The first phase is “technology-based,” where EPA develops standards for controlling the emissions of air toxics from sources in an industry group (or “source category”). These maximum achievable control technology (MACT) standards are based on emissions levels that are already being achieved by the best-controlled and lower-emitting sources in an industry.
- Within 8 years of setting MACT standards, the CAA directs EPA to assess the remaining health risks from each source category to determine whether the MACT standards protect public health with an ample margin of safety and protect against adverse environmental effects. This second phase is a “risk-based” approach called residual risk. Here, EPA must determine whether more health-protective standards are necessary.
- Also, every 8 years after setting MACT standards, the CAA requires that EPA review and revise the standards, if necessary, to account for improvements in air pollution controls and/or prevention.
- The Solvent Extraction for Vegetable Oil Production NESHAP is one of 96 air toxic standards that require 174 industry sectors to eliminate 1.7 million tons of 187 toxic air pollutants that are listed by Congress in the CAA.

FOR MORE INFORMATION

- To download a copy of the proposed rule notice, go to EPA's website at <https://www.epa.gov/stationary-sources-air-pollution/solvent-extraction-vegetable-oil-production-national-emission>.
- Today's action notice and other background information are also available either electronically at <https://www.regulations.gov/>, EPA's electronic public docket and comment system, or in hardcopy at the EPA Docket Center's Public Reading Room.
 - The Public Reading Room is located at the EPA Headquarters library, room number 3334 in the EPA WJC West Building, 1301 Constitution Avenue, NW, Washington, DC. Hours of operation are 8:30 a.m. to 4:30 p.m., eastern standard time, Monday through Friday, excluding Federal holidays.
 - Visitors are required to show photographic identification, pass through a metal detector and sign the EPA visitor log. All visitor materials will be processed through an X-ray machine as well. Visitors will be provided a badge that must be visible at all times.
 - Materials for this proposed action can be accessed using Docket ID No. EPA-HQ-OAR-2019-0208.
- For further technical information about the rule contact Bill Schrock, at the EPA's Office of Air Quality Planning and Standards, at (919) 541-5032 or schrock.bill@epa.gov.
