

Q: How Collaborative was the National Emissions Collaborative?

"I think you should be more explicit here in step two."

Credit: Sidney Harris

The National Emissions Collaborative

State and regional air planning agencies and U.S. EPA came together in 2018/19 to build a new national emissions modeling platform

A: Very Collaborative

200+ people from 30+ agencies worked for 20 months to create a new 2016-based emissions modeling platform for the U.S.

? How was the Collaborative Organized

? What lessons were learned in the process

? Was this a paradigm shift in emissions modeling?

? What do the data look like?
