## Acknowledgements

The Kinnickinnic River Sediment Remediation Project was jointly funded by the U.S. Environmental Protection Agency–Great Lakes National Program Office and the Wisconsin Department of Natural Resources, under the aegis of the Great Lakes Legacy Act. The success of the project was attributable to the extraordinary collaboration between federal, state, and local agencies and stakeholder groups. The Wisconsin Department of Natural Resources project manager, Xiaochun Zhang, was instrumental in leading the project from the earliest stages of remedial investigation, feasibility study, design, and implementation. Marsha Burzynski coordinated with local community groups to implement community outreach and media events for the project. Larry Sullivan at the Port of Milwaukee provided logistical support for the project, including the use of the Port of Milwaukee building for project team meetings, and provided technical support for design issues relating to the Milwaukee Area Confined Disposal Facility. Dave Bowman, as primary point of contact with the U.S. Army Corps of Engineers, was responsible for coordinating the Wisconsin Department of Natural Resources' request to use the confined disposal facility for disposal of the Kinnickinnic River dredged sediments, and for providing technical assistance for various aspects of the project design. Jeff Dellemann and Paul Novotny of the City of Milwaukee provided logistical assistance to coordinate bridge openings and traffic control during the dredging, and helped to facilitate the relocation of buried utilities in the project area. Finally, the project would not have been successful without the ongoing support of the Business Improvement District No. 35, consisting of the various commercial property owners adjacent to the Kinnickinnic River project area. Their involvement in the sediment cleanup project demonstrated the high level of community support for the Kinnickinnic River Great Lakes Legacy Act sediment remediation project.

**Kinnickinnic River Sediment Remediation Project  
Milwaukee, WI  
Remedial Action Report**

The U.S. Environmental Protection Agency Great Lakes National Program Office approves the Remedial Action Report submitted by CH2M HILL on March 14, 2011, for the Kinnickinnic River Sediment Remediation Project in accordance with the Remedial Action Contract 2 Work Assignment 049-RARA-1508. The remedial action included construction of a containment cell and offloading platform at the Milwaukee Harbor confined disposal facility, relocation of utilities that interfered with the remedial action, dredging of contaminated sediments from the Kinnickinnic River, and construction of shoreline protection at Parcel 424, scour protection around bridges, and removal of selected abandoned piles within the project area. The remedial action was completed in accordance with the design specifications. A final inspection was completed, and the remedy is operational and functional.

# 1. Introduction

---

This remedial action report documents remediation of the Kinnickinnic (KK) River, which is part of the Milwaukee Estuary Area of Concern. The project was a joint effort between the U.S. Environmental Protection Agency (USEPA) Great Lakes National Program Office and its nonfederal sponsor Wisconsin Department of Natural Resources, conducted under the Great Lakes Legacy Act. Additional project partners include the U.S. Army Corps of Engineers, the City/Port of Milwaukee, and local property owners – Business Improvement District No. 35. This report documents work performed by CH2M HILL and its subcontractors under Remedial Action Work Assignment (WA) 049-RARA-1508 (WA 049).

## 1.1 Site Description

The KK River discharges into Lake Michigan through the federal navigation harbor in Milwaukee, Wisconsin (Fig 1-1). The project area is a 2,000-foot-long, 200-foot-wide section of the lower KK River, between KK Avenue, the downstream limit, and Becher Street, the upstream limit. The total area of the project is 7.3 acres. The KK River is part of the Milwaukee Estuary Area of Concern, and the project area consists of the most significantly contaminated sediment in the KK River part of the Area of Concern. The project area historically was dredged to a depth of 21 feet for commercial navigation. As deep draft commercial traffic upstream from KK Avenue declined, maintenance of the channel depth was discontinued. Water depth in the dredged channel and other parts of the project area gradually declined to shallow conditions (0 to 10 feet of water) because of the sediment that had accumulated. Deep draft navigation depths are maintained by the U.S. Army Corps of Engineers (USACE) in the Milwaukee Harbor federal navigation channel immediately downstream of the project area (Figure 1-1).

The river had been affected by urban growth and development between the 1900s and 1970s, with point and nonpoint discharges and spills. Historical events had resulted in contamination of the sediments, particularly within the project area, with polychlorinated biphenyls (PCBs) and polycyclic aromatic hydrocarbons (PAHs). Many regulatory and nonregulatory programs – point source controls, spill reporting and response, hazardous site cleanups, and brownfield redevelopment programs – have significantly reduced the input of contaminants into the KK River. More recent stormwater control requirements are beginning to address nonpoint sources.

Use of the KK River has changed. After a period of low use, new recreational- and commercial-based enterprises requiring deep draft navigation depths have returned to the project area shoreline.

## 1.2 Overall Description of the Kinnickinnic River Sediment Remediation Project

Responsibility for river cleanup work was divided between the USEPA Great Lakes National Program Office and the Wisconsin Department of Natural Resources as the nonfederal sponsor of the site, in accordance with the Great Lakes Legacy Act Project Agreement. USEPA contracted CH2M HILL to complete the remedial design and to conduct most of the remedial activities. Individual property owners (members of Business Improvement District No. 35) were responsible for stabilizing their own shoreline structures as part of the project.

Based on previous evaluations of the site and negotiations with various stakeholder groups, a dredging and disposal remedy was selected for the contaminated sediments in the KK River between KK Avenue and Becher Street. Remedial activities consisted of the following tasks:

- Construct a specially designed cell (the KK Cell) within the Milwaukee Area Confined Disposal Facility (CDF) at Jones Island to contain contaminated sediments dredged from the KK River.
- Construct an offloading platform that would allow barges to tie up and offload equipment to transfer sediments from the barges into the CDF.
- Construct shoreline stabilization features so that remedial dredging activities would not destabilize shoreline areas along the riverbank in the project area.
- Verify the locations of utility lines beneath the river with the applicable local utility services, and relocate utilities that interfere with planned dredging activities.
- Dredge an estimated 167,000 cubic yards of contaminated sediment from the river.
- Transport the contaminated sediments from the river to the CDF, and transfer the dredged material into the KK Cell.
- Monitor turbidity in the river during dredging activities to verify that total suspended solids (TSS) concentrations do not exceed criteria.
- Minimize transport of TSS outside of the project area.
- Collect post-dredging sediment samples to determine whether redredging or placement of a residual cover is required.
- Place residual sand cover over specific areas, as necessary, based on residual PCB and PAH concentrations determined during post-dredge sampling.
- Remove water seeping from the dredged sediments at the CDF during dredging operations, and continue water removal for 6 months after completion of dredging.
- Monitor turbidity and PCB concentrations in water discharged to the Milwaukee Metropolitan Sewerage District (MMSD) manhole, and treat water if necessary to comply with discharge permit criteria.

## 1.3 Remedial Action Objectives and Goals

The purpose of the project was to remove contaminated sediments from the Milwaukee Estuary Area of Concern, which in turn would assist with the long-term goals of eliminating beneficial use impairments. Specific project objectives included the following:

- Remove PCB- and PAH- contaminant mass.
- Remove sediments with PCB concentrations greater than 1 milligrams per kilogram (mg/kg) and PAH concentrations greater than 37 mg/kg.
- Reduce the risk of contaminated sediments to aquatic life and human health.
- Reduce transport of PCBs and PAHs from the KK River downstream to the Milwaukee Harbor and Lake Michigan.
- Improve water quality in the KK River and Milwaukee Estuary Area of Concern.
- Advance the Area of Concern toward eventual delisting by eliminating impairments to beneficial use.
- Expedite the process of eliminating the fish consumption advisory in the KK River.

Secondary benefits of the project included the improvement of navigational conditions for recreational and commercial vessels, thus providing enhanced economic development opportunities for the community, and improved aesthetics.

## 1.4 Beneficial Use Impairments

The completion of the KK River Sediment Remediation Project was intended to advance the Milwaukee Estuary Area of Concern toward delisting by eliminating or greatly improving the status of the following impairments to beneficial use within the Area of Concern:

- Restrictions on fish and wildlife consumption
- Degradation of fish and wildlife populations
- Degradation of aesthetics
- Degradation of benthos
- Restriction on dredging activities

## 2. Chronology of Events

---

### 2.1 History of Remedial Activities at the Site

Table 1-1 describes the major remedial activities, with the completion dates.

### 2.2 Remedial Activities

The following is a summary of the major RA activities for which CH2M HILL was responsible as the prime contractor for the WA:

- Performed project planning activities, which included preparation of work plans and other site-specific plans, project management and reporting, and participation in technical meetings and community outreach events with stakeholders.
- Procured subcontractors.
- Performed administrative and field management of subcontractors.
- Constructed the KK Cell at the CDF.
- Constructed an offloading platform at the CDF.
- Arranged for relocation of utilities that interfered with remedial activities.
- Monitored conditions during remedial activities to verify compliance with environmental and other criteria as required by regulations or permits.
- Dredged 158,603 cubic yards of contaminated sediments in the river segment between the KK Avenue and Becher Street bridges in three phases. Phase 1 was a first pass from downstream to upstream to achieve a water depth of 10 feet below low water datum. Phase 2 was a second pass to dredge to design elevations. Phase 3 consisted of additional dredging based upon the results of post-dredge sediment confirmation sampling.
- Transported material dredged from the river to the CDF on scow barge, and distributed the material within the KK Cell boundaries.
- Installed sheet piling along a City-owned parcel designated as Parcel 424.
- Performed post-dredge confirmation sampling for PCBs and PAHs as individual remedial management units (RMUs) were completed.
- Placed clean sand and riprap over specific dredged areas based on the results of confirmation sampling.
- Removed abandoned piles from the river that presented a hazard to navigation.
- Installed a permanent scour protection structure around the Canadian Pacific Railway Bridge.
- Performed project closeout activities.

## **2.3 Contractors, Subcontractors, and Parties to Agreements**

Table 2-1 lists the contractors and subcontractors involved with the KK River Sediment Remediation project and describes their respective roles. It also lists parties to agreements related to the project and describes the nature of the agreements.

## **2.4 Chronology of Remedial Action Activities**

Table 2-2 summarizes major events associated with the RA.

## **3. Remedial Action Activities**

---

### **3.1 KK Cell Construction**

The KK Cell was constructed to contain the contaminated sediment dredged from KK River within the CDF. The USACE prepared the preliminary design for the cell to hold 180,000 cubic yards of material, more than the 167,000 cubic yards estimated to be generated during the dredging. CH2M HILL finalized USACE's preliminary design under WA 041-RDRD-6081 (WA 041). Appendix A contains photos of the remedial activities, including KK Cell construction photos. Appendix B contains copies of the KK Cell design drawings.

CH2M HILL issued a subcontract to Freeman Environmental Services of Herron, Illinois, under WA 049 to construct the KK Cell. Freeman and its lower-tiered subcontractor, New Berlin Grading of Waukesha, Wisconsin, constructed the cell between October 16 and December 24, 2008.

Underdrains were installed beneath the cell to channel water from dredged material to a collection sump manhole to aid in dewatering the sediment after placement in the cell. Water was pumped from the collection sump manhole to the MMSD manhole 200 feet west of the KK Cell. A few design modifications became necessary during construction of the cell because of the lack of suitable material available onsite to complete the berms. These design modifications are documented in Appendix B.

### **3.2 Offloading Platform Construction**

An offloading platform was constructed at the CDF to enable offloading of barges during the project. CH2M HILL awarded the Edward E. Gillen Company of Milwaukee, Wisconsin, a subcontract under WA 049 to complete a design and to construct the offloading platform. Gillen completed the final design for the offloading platform in accordance with the requirements provided by USACE. Construction of the offloading platform took place between February 24 and April 15, 2009. Appendix C contains copies of the record drawings of the offloading platform. Appendix A contains a photo of the offloading platform.

### **3.3 Environmental Dredging**

This section describes the dredging process and includes information regarding the major elements of the project. CH2M HILL issued a subcontract to Ryba Marine Construction Company of Cheboygan, Michigan, on May 1, 2009, to perform the dredging and related activities. Appendix A contains photographs of the project work.

#### **3.3.1 Dredging Process**

Ryba mobilized to the site in May 2009. Mobilization consisted of setting up the field office and construction of the CDF infrastructure, including an access road and a concrete offloading pad. Other work consisted of setting up of offloading and dredging equipment

and storage trailers. The dredge barge was a 120- by 45- by 8-foot spud barge. Three material scows, ranging in size from 130 by 35 by 12 feet to 185 by 38 by 15.5 feet, were mobilized to the project area. A 400-horsepower tugboat and a 450-horsepower push boat were used to move the barges and scows around the project area.

Dredging began June 1, 2009. Dredging was performed using a 100-ton crane and a 6-cubic-yard level cut environmental bucket, except in areas where significant amounts of debris or sand precluded its use. In those areas, a conventional clamshell bucket was used. The clamshell bucket was used in the area near Southwind Marine because of the presence of old wooden piles and steel debris, during the removal of an abandoned tugboat *Edward E. Gillen* between station 1+00 and 4+00, where there was a significant amount of sand, and around the bridges where debris was encountered. Figure 3-1 shows the project area, stationing, and properties and other features near the project area.

Dredging was performed continuously in two 12-hour shifts. Maximum daily production was 3,600 cubic yards, while average daily production was 1,300 cubic yards over the 125 days of dredging, including all downtime. Appendix D contains Ryba's weekly dredging progress reports.

### **3.3.2 Disposal in the KK Cell**

#### **3.3.2.1 Transport to the CDF**

The dredged material was transported roughly 3 miles from the project area to the CDF using scows pushed by a tugboat. Figure 1-1 shows the transportation route.

#### **3.3.2.2 Offloading and Debris Management**

The dredged materials were offloaded at the CDF using a 249-horsepower material handler with a 3.5-cubic-yard clamshell bucket and passed through a 24-inch screen to remove oversized debris that could not be disposed of in the CDF. The oversized debris was decontaminated and placed into one of three rolloff bins, depending on whether it was steel, rubber (tires), or miscellaneous debris. The debris was then hauled offsite for recycling or disposal. A total of 173 tons of debris were disposed during the dredging activities.

#### **3.3.2.3 Transfer into the KK Cell**

The screened sediment was pushed down a concrete pad specially constructed by Ryba toward the northeastern corner of the CDF where it entered the cell. In the beginning of the project, Ryba moved the sediment out into the KK Cell by using a long reach excavator. After about 4 weeks of dredging, however, conveying the sediment into the CDF became a bottleneck that reduced efficiency. Ryba mobilized a dragline system that used a Sauerman bucket to move the dredged material into the cell. The dragline system used a series of pulleys and winches to move the bucket back and forth across the cell. A bulldozer was used as a movable anchorage point for the bucket cable, so that the material could be evenly distributed within the cell. The installation and operation of the dragline system eliminated the bottleneck and kept the project on schedule.

### **3.3.3 Turbidity Control**

Turbidity monitoring was required to show compliance with permit-required suspended solids and turbidity criteria (described in Section 4.1.1). Additionally, engineering controls

were required to limit transport of suspended solids outside the project area. Ryba proposed the use of an air bubble curtain at the downstream end of the project area, and the regulatory stakeholders allowed this technology to be implemented. Ryba used silt curtains around the dredging area until the air bubble curtain was operational.

### 3.3.3.1 Silt Curtains

Silt curtains had been used for turbidity control during the first few weeks of dredging while the air curtain was being set up and tested. After about 2 weeks, the air curtain was installed and operational, and the silt curtains were removed. The air curtain created a vigorous bubbling action in the water. Signs were installed at both ends of the air curtain stating “Caution – Bubbler System” so that casual boaters would understand the cause of the bubbling.

Silt curtains proved quite difficult to use in the KK River. The silt curtains would shift during moderate river flow and wind gusts. When the dredge plant needed to be moved, the silt curtain would have to be opened up. This made the silt curtains susceptible to tears. Finally, once the air bubble curtain was installed, the silt curtains were removed from the river entirely.

### 3.3.3.2 Air Bubble Curtain

The air bubble curtain became operational on June 6, 2009. This air bubble curtain consisted of a perforated pipe with specially designed air nozzles installed at the bottom of the river. The pipe ran across the entire center channel of the river and was attached to the protective dolphins on the downstream side of the KK Avenue Bridge. Silt curtains extended between the dolphins and the shorelines (refer to Figure 3-1 for the location of the air bubble curtain). Compressed air was forced continuously through the pipe, creating a wall of bubbles to reduce turbidity passing downstream. The use of the air curtain enabled recreational and project vessels to pass through unimpeded without requiring the labor-intensive task of moving a silt curtain from time to time for vessel passage.

The KK River is subject to seiche effects in Lake Michigan, and flow can temporarily reverse direction (away from the lake). To monitor the frequency of seiche effects and their impact on turbidity control, a flowmeter was used to measure direction and current of the river at a midstream depth from the western side of the southern pier of the KK Avenue Bridge once daily starting on August 4. Based on the daily measurement at the monitoring point, 72 percent of the days the river flowed out toward Lake Michigan, and 28 percent of the days it flowed in from the lake. The average flow velocity was 0.10 ft/sec out toward the lake.

The air curtain operated continuously for the duration of the dredging and sand placement (mid-June until the end of October). Upstream and downstream turbidity monitoring results indicated the only exceedances of turbidity criteria occurred following major storms and were not tied to dredging activities. Over the course of the project, the average downstream turbidity monitoring station reading was 7.2 NTUs less than the upstream station reading (Table 3-1 shows the turbidity monitoring results). In addition to the turbidity monitoring data, evidence of sediment mounding on the upstream side of the air bubble curtain at the conclusion of the project also indicated the air bubble curtain was successful in removing suspended solids from the river.

Appendix E contains air bubble curtain monitoring data.

### **3.3.4 Shoreline Stabilization and Bridge Scour Protection Features**

Scour protection was integrated into the project to ensure that bridge abutments were not affected by dredging.

#### **3.3.4.1 Bridge Scour Protection**

The project area had not been dredged for navigation since the 1940s. All three vehicular traffic bridges in the project area (the Becher Street Bridge, the S. 1st Street Bridge, and the KK Avenue Bridge) were constructed since dredging last was done, and there was concern that lowering the channel depth might increase scour near the bridges. CH2M HILL performed a scour analysis for the bridges owned by the City of Milwaukee. Two were found to be scour critical (the S. 1st Street and S. KK Avenue bridges), and so scour protection in the form of riprap was installed. Appendix F contains the scour analysis report and riprap placement drawings for the three vehicular traffic bridges.

Ryba placed riprap scour protection at the KK Avenue Bridge as part of dredging subcontract because the dredging work made the KK Avenue Bridge scour critical and it had not been scour critical under existing conditions. The City of Milwaukee issued a contract to Ryba to place riprap scour protection at the S. 1st Street Bridge and one-half of the cost of the work was reimbursed with project funds under the Great Lakes Legacy Act because the bridge had an existing scour problem that was worsened by the dredging. The Becher Street Bridge was not made scour critical due to the dredging, and the existing riprap scour protection was left in place during the project. Additional sand was placed just downstream of the Becher Street Bridge (at the upstream end of the project area) to mitigate the impact of headcutting. (Headcutting is the erosion of material when a river or stream transitions from a shallow to deeper channel).

The Canadian Pacific Railway Bridge had an existing scour issue that would have been worsened by dredging. CH2M HILL issued a subcontract to Gillen to design and install a scour protection structure for the bridge consisting of sheet piling and concrete (Canadian Pacific Railway's engineering consultant, Westbrook Associated Engineers of Spring Green, Wisconsin, worked with Gillen on the design). Installation of the structure was performed in February and March 2010. Appendix F contains copies of the record drawings of the structure.

#### **3.3.4.2 Parcel 424 Shoreline Stabilization**

The City of Milwaukee owns Parcel 424, a small, triangular, landlocked parcel between the Canadian Pacific Railway and S. KK Avenue bridges. The parcel has a very steep slope, and its shoreline appeared to be unimproved, although it might have been reinforced with timber sheeting deteriorated since its installation. Figure 3-1 shows the location of Parcel 424. As part of the project, CH2M HILL issued a subcontract to Gillen to design and install a sheet pile wall with tieback anchors to provide long-term stability for the parcel. Installation was performed in August and September, 2009. Appendix G contains copies of the record drawings.

### **3.3.5 Waste Drums Encountered During Dredging**

On August 8, Ryba encountered two 55-gallon drums of unknown contents while dredging. One drum was damaged when it was encountered, and some of its contents spilled into the river. After taking immediate spill containment measures and notifying the National

Response Center spill hotline, the Wisconsin Department of Natural Resources, and the local U.S. Coast Guard office, the drums were transported to the staging area at the CDF.

On August 12, a small metal drum containing a black, tarry substance was encountered while dredging. That drum also was transported to the staging area at the CDF.

Overpack drums were purchased, and the waste drums were placed into the overpack drums on August 13. The drums were sampled for waste characterization on September 23, 2009. Results of the analyses indicated the drums contained hazardous waste. The drums were picked up and disposed of by Badger Disposal of Wisconsin, Inc. (WID988580056). Appendix H contains copies of the disposal documentation.

### **3.3.6 Utility Relocation**

Four utilities required relocation as part of the project. Three are owned by the City: the bridge control cables for the S. 1st Street Bridge, the bridge control cables for the KK Avenue Bridge, and a fiber-optic line providing 911/police/fire communications for the City. The fiber-optic line was removed from service temporarily in May 2009 before dredging began (this could be done because it is a redundant system), and it was reinstalled in August and September 2010 by CableCom, LLC, of Milwaukee under a contract to the City. Ryba replaced the bridge control cables during the dredging under a contract with the City. The relocation work for the S. 1st Street Bridge control cables was performed between September 13 and 16, and relocation work for the KK Avenue Bridge control cables was performed between September 20 and 30, 2009. The fourth utility was a fiber-optic line owned by Rogers Telecom of Toronto. It was relocated during the dredging project by Gabes Construction Company of Sheboygan, Wisconsin. Relocation was completed on July 29, 2009 and the fiber optic line is now well below the dredge elevation. Appendix I contains copies of record drawings for relocated utilities. Figure 3-1 shows the locations of relocated utilities.

### **3.3.7 Coordination with Local Marinas and Coast Guard**

Three marinas operate within the project area: Pier Milwaukee, Milwaukee Marine Yacht Club, and Southwind Marine (Figure 3-1). Project stakeholders worked with marina operators before dredging began to prepare them for the impact on their businesses and to determine if there were ways to minimize impacts to their operations during dredging. Once Ryba was secured as the dredging subcontractor, Ryba worked directly with marina operators to coordinate boat launches in the spring and the return of boats in the fall. Laminated cards with project information were produced and provided to local marinas for distribution to boaters. As the project continued, Ryba and the project team discussed the progress of dredging with the marinas and attempted to address their concerns regarding business impacts.

Project stakeholders discussed the project with the U.S. Coast Guard before dredging began. The Coast Guard issued a Notice to Mariners and updated it during the project.

## **3.4 Sequencing, Testing, and Clearance Procedures**

### **3.4.1 Sequencing**

Dredging was performed in phases to enable it to proceed more efficiently. During Phase 1, sediments were removed to a depth that allowed the fully loaded scows to traverse the

project area. The first phase was conducted from downstream to upstream. During Phase 2, sediments were removed to design depth, proceeding from upstream to downstream. During Phase 3, additional sediment was removed based on the results of confirmation samples collected after the completion of Phase 2. Phase 4 consisted of placing a residuals cover layer over areas that did not meet the cleanup objectives after Phase 3.

The project area was divided into four RMUs (Figure 3-1) for the purpose of establishing areas for confirmation sampling and to determine additional remedial activities for samples in each RMU as it was completed. RMUs 1 and 2 were done this way. Parts of RMU 3 temporarily could not be dredged because of utility relocations at the S. 1st Street Bridge, so some confirmation sampling was done in RMU 4 before dredging was completed in RMU 3.

### **3.4.2 Testing and Clearance**

USEPA determined post-dredge clearance (i.e., deemed complete) of an RMU based upon sediment confirmation sample collection and analysis, and on the results of the bathymetric survey. After Phase 2 of the dredging (dredging to design cut lines) was done in an RMU and verified as completed by interim bathymetric surveys conducted by Ryba, confirmation samples were collected. The samples were submitted to Mitkem Laboratories of Warwick, Rhode Island, through the USEPA Contract Laboratory Program (analysis of samples was not part of WA 049). Samples were analyzed for PCBs and PAHs to identify areas requiring additional removal, a residuals cover layer, or both. After removing the additional sediment and the interim bathymetric surveys determined that Phase 3 was completed in the RMU, a bathymetric survey for payment was conducted.

## **3.5 Placement of Residual Cover Material**

Confirmation sampling was done to guide the course of action following Phase 2 of the dredging. Where sediment left in place following Phase 3 exceeded the cleanup criteria, a residuals cover layer was placed. Confirmation sampling is described in Section 4.1.4.

### **3.5.1 Sand Cover**

The residuals cover layer consisted primarily of sand. Thickness of the sand cover (6 to 48 inches) varied based upon residual contaminant concentrations in the remaining sediment and also on slope stability considerations. Where additional dredging was performed on sideslopes to address residual contamination below the design dredge cuts, sand was placed on the sideslope to bring the final elevation back to design.

Most of the sand was placed using a broadcast spreader on the end of a barge. Some sand was placed by clamshell bucket. The conventional clamshell bucket generally was used in areas that required a thick residuals cover layer (18 inches or greater). The broadcast spreader, which was capable of broadcasting sand in an arc pattern 40 feet across, was used in areas requiring a thinner cover layer (12 inches or less). Use of the sand spreader helped to minimize disturbance of the sediments by spreading the sand over a larger area. Before using the sand spreader on the river, terrestrial performance testing was done to develop operational parameters to control the speed, distance, and direction of the sand particles. This ensured optimum coverage and minimized overplacement.

Johnson Sand and Gravel of New Berlin, Wisconsin, supplied sand for the cover. The sand was washed at the quarry, transported by dump truck to the staging area, and stored until loaded onto the material barges. Three gradation tests were performed before and during sand delivery to show compliance with subcontract specifications. Appendix J contains the gradation test results.

Ryba conducted daily bathymetric surveys to document post-placement conditions, as described in Section 4.1.2.2. Ryba provided the surveys for review and approval by CH2M HILL. An overplacement allowance of 12 inches was granted for placement of sand on sideslopes, and an overplacement allowance of 6 inches was granted for placement of sand in the channel.

A total of 41,899 tons of sand were placed. Figure 3-2 shows the final cover sand thickness areas.

### **3.5.2 Riprap**

Limited riprap placement was done to address residual contamination. The area beneath the center span of S. 1st Street Bridge was covered with riprap because of the presence of slightly elevated PCB concentrations and the potential for higher flow velocities to scour the sand placed there. Riprap was already in place around the bridge piers and abutments for scour protection, and over the top of the relocated bridge control cables. Completely covering the footprint underneath the center span made a more consistent profile. The linear footage of edge transitions from sand/sediment to riprap back to sand/sediment, where erosion can occur, was greatly reduced. Thus, the overall stability of the riprap was improved.

Figure 3-2 shows the areas where riprap was placed, both to address residual contamination and to provide scour protection.

## **3.6 Abandoned Pile Removal**

A secondary benefit of the removal of contaminated sediment from the KK River was improved navigability. Sediment removal exposed dozens of abandoned piles throughout the project area. The project team identified piles that posed a safety or navigation hazard, and CH2M HILL subcontracted with Gillen to remove them. One hundred thirty piles were removed in February and March 2010, decontaminated, and disposed of offsite at a landfill.

Figure 3-3 shows the locations where abandoned piles were removed.

# 4. Monitoring and Post-dredging Conditions

---

## 4.1 Monitoring Activities

Environmental monitoring activities were performed during the project to protect human health and the environment. Monitoring consisted of the following:

- Monitoring river water quality for turbidity (as a surrogate measurement for TSS) during environmental dredging operations
- Conducting a bathymetric survey before dredging operations began, to establish the baseline river bottom profile for payment purposes
- Monitoring water discharged to the MMSD facilities at the CDF for PCBs and turbidity
- Quantifying PCB and PAH concentrations in the sediment remaining after completion of initial dredging to design elevations to determine if additional dredging is required and feasible
- Conducting a bathymetric survey following completion of dredging operations to define the river bottom profile and to determine the volume of sediment removed
- Conducting bathymetric surveys following sand cover placement to document the thickness and volume of cover material placed
- Determining surficial PCB and PAH concentrations following completion of dredging and sand cover placement operations

The Field Sampling Plan (CH2M HILL, 2009a) and Quality Assurance Project Plan (CH2M HILL, 2009b) contain details regarding the sampling activities listed above.

### 4.1.1 River Water Quality Monitoring

Water quality monitoring was performed in the KK River during dredging activities. The project-specific TSS standard was a downstream measurement of less than 80 milligrams per liter (mg/L) above background. Continuous (hourly) turbidity measurements were recorded in nephelometric turbidity units (NTUs) at stations 200 feet upstream and 1,000 feet downstream of the dredge area. Figure 1-1 shows the locations of the turbidity monitoring stations. The flowmeter testing described in Section 3.3.3.2 was used to determine which direction was upstream and downstream, and whichever turbidity monitor was in the upstream direction was considered background.

Turbidity readings in NTUs were used as a surrogate for TSS. During the design, Barr Engineering established a correlation between NTUs and TSS (Barr, 2008). CH2M HILL developed another TSS and turbidity correlation during the dredging that validated the earlier correlation. The correlation was approximately one NTU equals one mg/L TSS; this correlation was used for the duration of the project. Appendix A contains CH2M HILL's TSS and In Situ Turbidity Correlation Technical Memorandum.

The two monitoring stations were in-stream, real-time automated turbidity meters that took readings hourly. The turbidity sensors were deployed at roughly the mid-depth of the channel. Turbidity readings were transferred by cellular modem telemetry, compiled, and made available on a password-protected Web site within 5 minutes of each reading. Data from the turbidity sensors were stored in an integrated data logger that could be accessed if the telemetry system was inoperable. Table 3-1 lists the data recorded by the turbidity monitoring stations during the dredging activities. When the turbidity meters drifted out of calibration, as indicated by repeated negative values, they were taken offline and recalibrated.

Procedures for water sampling and turbidity monitoring are described in the *Kinnickinnic River Field Sampling Plan* (CH2M HILL, 2009).

## **4.1.2 Bathymetric Surveys**

### **4.1.2.1 Bathymetric Surveys for Payment**

Bathymetric surveys for payment purposes were performed before the start of and upon completion of all dredging. Ryba's bathymetric surveying subcontractor, Veolia ES Special Services of Neenah, Wisconsin, performed the bathymetric surveys. Bathymetric surveys were done hydrographically except at locations with shallow water or obstructions, such as docked vessels. The bathymetric surveys were supplemented with data collected using conventional surveying equipment or with data collected by Ryba for its interim surveys. The pre-dredge survey was conducted from May 18 to 29, 2009. The post-dredge survey for RMU 1 (and a part of RMU 2) was conducted on September 11, 2009. The post-dredge survey for RMUs 2, 3, and 4 was conducted on October 2, 2009.

Third party oversight of the bathymetric surveys for payment was provided by Affiliated Researchers of Oscoda, Michigan. Affiliated Researchers was subcontracted to Weston Solutions, Inc., of West Chester, Pennsylvania, which USEPA contracted through a Superfund Technical Assessment and Response Team contract. A representative of Affiliated Researchers participated in all field activities during the surveys for payment, obtained the raw data and processed it independently of Veolia, and worked with Veolia to resolve discrepancies among the final products. Affiliated Researchers also provided oversight reports (see Appendix L) to document its post-dredge bathymetric surveying evaluations.

Bathymetric surveys for payment were completed on 25-foot transects. This ensured that adequate data were collected during the surveys to model the bottom sediment surface accurately. The transects were run perpendicular to the flow of the river (i.e., bank to bank), as that method is the most accurate way to depict the bottom surface model in processing programs because of the triangulation methods used by the software. The data collected during the surveys were processed using Hypack software.

The final volume of sediment removed in Phases 1 and 2 was 137,542 cubic yards. Another 21,061 cubic yards of sediment was removed as part of Phase 3. These totals were adjusted, per the contract requirements, to account for dredging performed beyond the overdredge allowance of 12 inches. The revised total amount dredged on the project is 158,603 cubic yards. Appendix M contains Ryba's final survey, after dredging but before placement of sand.

### 4.1.2.2 Interim Bathymetric Surveys

Ryba performed interim bathymetric surveys as necessary to verify it had completed dredging down to design elevations as the work proceeded. Interim surveys typically were completed daily to document the previous day's work. Ryba was not required to provide results of the interim surveys except once monthly as the basis of progress payments.

During placement of sand for the residuals management layer, Ryba performed interim bathymetric surveys daily to document the post-placement conditions of work done the previous day. Daily surveys were necessary to reduce the chance for sand to be moved by the river current before surveying was done. The final post-sand placement bathymetric survey (Appendix M) was an agglomeration of the daily surveys.

### 4.1.3 CDF Water Monitoring

#### 4.1.3.1 KK Cell Construction Monitoring (2008)

Before construction of the KK Cell could begin, 11 million gallons of water ponded in the center of the KK Cell footprint had to be removed. The Port of Milwaukee held an existing permit with MMSD to allow discharge of accumulated surface water to the sanitary sewer system. The Port secured a contractor, and on June 25, 2008, began to remove the ponded water and to discharge it to the sanitary sewer manhole on the Port of Milwaukee property under the terms of the permit with MMSD.

Since the construction of the KK Cell would involve dewatering from within the soil matrix, CH2M HILL and the Port's consultant, Giles Engineering Associates, Inc., of Waukesha, Wisconsin, collected three water samples on July 9, 2008, and submitted them to a laboratory for PCB analysis. One Aroclor was detected at trace levels in all three samples. Appendix N contains the results of the sampling.

Freeman Environmental Services, Inc. of Herrin, Illinois, took over dewatering of the CDF once it mobilized to begin construction on October 15, 2008. Initially, Freeman pumped surficial water to the sanitary sewer manhole. Once the underdrain sump was constructed, water was pumped from the sump manhole to the sanitary sewer. Dewatering activities for 2008 ended December 24, when construction of the KK Cell was completed. Turbidity readings initially were taken twice a day during Freeman's surficial dewatering, then once daily when work was being done at the CDF. No formal turbidity criterion was established for dewatering in 2008. Turbidity ranged between 22 and 77 NTUs. Table 4-1 summarizes the dewatering activities.

#### 4.1.3.2 2009 Dewatering: Pre-dredging

CH2M HILL started dewatering operations in 2009 using the sump, as soon as temperatures were warm enough. Dewatering began on March 27, 2009. A water sample for analysis of PCBs, semivolatiles organic compounds, TSS, metals, and mercury analyses was collected on April 1, 2009, in support of ongoing discussion with MMSD regarding sampling requirements for CDF dewatering during dredging activities. Appendix N contains the analytical results for the sample. Turbidity monitoring also was performed regularly once the water exhibited some cloudiness (starting in late April). Results are reported in Table 4-1. Turbidity ranged from 6 to 24 NTUs before dredging began on June 2, 2009.

#### 4.1.3.3 2009 Dewatering: Post-dredging Startup

Discussions were held among MMSD, the USEPA, the Port, WDNR, and CH2M HILL regarding sampling requirements for ongoing dewatering during disposal of dredged material at the CDF. (Disposal of dredged material began on June 2, 2009.) The MMSD issued a new permit (Appendix O) on May 12, 2009, specifically for dewatering during and after the dredging for the project. Sampling requirements included PCB sampling twice weekly and turbidity monitoring daily. Once compliance was demonstrated for 6 consecutive weeks, PCB sampling was required only once weekly. PCB samples were analyzed by Kap Technologies, Inc., of The Woodlands, Texas, through USEPA's Contract Laboratory Program. Preliminary results were provided within 72 hours after sample receipt. The rapid turnaround time was intended to reduce the volume of water discharged to MMSD if a noncompliance detection occurred. No PCB Aroclors were detected in any CDF water sample during dewatering. Table 4-2 presents complete PCB results. Appendix E contains the analytical reports.

Turbidity readings were obtained as a surrogate for TSS results (Table 4-1). The MMSD permit TSS criterion was 100 mg/L. After June 2, turbidity ranged from 4 to 169 NTUs. Three readings were greater than 100 NTUs. The elevated reading on July 16, 2009, was determined to be from the presence of algae in the water. A sample for laboratory TSS analysis was collected on that date, and the result was 68 mg/L, below the criterion of 100 mg/L in the permit. The other two readings over 100 NTUs occurred on August 19 and October 16, 2009. They were believed to be related to the water level dropping so low in the underdrain manhole sump that the sediment on the bottom of the manhole was picked up. Both times, the pumping rate and pump intake elevation were adjusted, and subsequent turbidity readings were below 100 NTUs.

As part of the permit, MMSD collected samples from the CDF and dredging area and submitted them to its own laboratory for analysis. Samples were collected on July 13 and 16 and August 12, 2009. Appendix E contains the sample results. Samples from the dredging area indicated low levels of PAHs and detection of one PCB Aroclor (1242) at 0.58 µg/L and 0.46 µg/L.

As part of the project agreement with the USACE and the Port, the USEPA agreed to continue dewatering at the CDF for 6 months (not including winter shutdown) following the completion of dredged material placement at the CDF. Dredging material placement ended on October 3, 2009. Dewatering operations stopped for the winter on December 9, 2009, about 2 months later, because of freezing temperatures.

#### 4.1.3.4 2010 Dewatering

Before dewatering resumed in 2010, MMSD issued a permit amendment reducing the frequency of PCB testing to once quarterly. Dewatering resumed on March 25. Water was pumped from several discrete pools on the surface of the CDF and from the underdrain sump manhole. Turbidity results ranged from 6 to 97 NTUs in 2010 (Table 4-1). MMSD collected a sample for PCB, volatiles, and pH analyses on April 27, 2010. Results indicated no detection of PCB Aroclors or volatiles by gas chromatography/mass spectrometry. pH was 6.35. Complete results are included in Appendix N. The last day of dewatering was July 18, 2010, as that date marked the end of the 6-month period after final deposition of dredged materials in the CDF.

#### 4.1.4 Post-dredge Sediment Confirmation Sampling

Following the completion of dredging activities at each RMU, sediment samples were collected using a barge-mounted hollow-stem auger drill rig for PCBs, PAHs, and grain-size analyses. To mitigate the effect of disturbed sediment transport into potential sample locations, sampling within each RMU occurred at the downstream extent and progressed upstream. Sediment core locations were surveyed and recorded using a global positioning system, capable of station positioning ( $x$  and  $y$  coordinates) within 1 meter.

The determination of the proposed sampling locations, numbers of PCB and PAH samples required, and a residuals management decision tree can be found in the *Kinnickinnic River Field Sampling Plan* (CH2M HILL, 2009a). Appendix P contains the residuals management decision tree. While this formed the basis for the post-dredging decision-making process, the project team, consisting of USEPA, WDNR, CH2M HILL, and the Port, met after preliminary sample results were received after each round of confirmation sampling and reviewed the PCB and PAH results location by location. Follow-up remedial action at each location, consisting of no action, additional dredging plus sand placement, or sand placement only, was determined based on consensus (a few locations had riprap placed as a residuals management cover).

Tables B-1 through B-3 in Appendix Q contain complete laboratory results for PCB, PAH, and grain-size analyses for post-dredge confirmation samples (these samples are indicated by station location "SD"). Appendix R contains complete laboratory results for PCB, PAH, and grain-size analyses. Most sample results for PAHs included results for both a standard analysis and a selected ion monitoring analysis. For samples where both analyses were performed, the result of selected ion monitoring was used as the method had much lower reporting limits.

When summing the individual Aroclors and PAHs to achieve a total, a value of one-half the method detection limit typically would be used if the result was reported as non-detect; however, the laboratory did not provide method detection limits for samples as part of its reporting packages. Therefore, a value equal to one-half the reporting limit was used. This was a conservative approach, as method detection limits typically are one-third or less of the reporting limits. When calculating a result for total PCBs, the results for Aroclors 1016, 1221, and 1232 were not included in the total because there were no detections of any of the three Aroclors in any sample for the project. Refer to the data quality evaluation memorandum in Appendix Q.

#### 4.1.5 Final Inspection

Because of the nature of the construction performed, the project team relied upon bathymetric data, poling data, and sample results to determine completion, in lieu of a visual inspection. Based on this data, it was concluded that dredging was completed on October 3, 2009. Similarly, based on daily bathymetric surveying data, it was determined that sand cover placement was completed on October 28, 2009.

#### 4.1.6 Post-remedial Action Grab Sampling

Post-remedial action grab sampling was performed to determine surficial PCB and PAH concentrations following completion of dredging and sand cover placement operations. Thirty-nine locations were sampled with a ponar sampler. The technical memorandum in Appendix S, Supplemental Field Sampling Plan for Post Cover Placement: Kinnickinnic

River Sediment Remediation Project (CH2M HILL, 2009d), contains details regarding the development of the sampling plan. Tables B-1 and B-3 in Appendix Q contain laboratory results for PCB and PAH for ponar grab samples (indicated by station location "PG"). The results were used to calculate the post-remedial action surface-weighted average concentration (SWAC), described in Section 4.2.

## 4.2 Post-remedial Action Surface-Weighted Average Concentration

A post-remedial action SWAC was calculated to determine average PCB and PAH concentrations that remained following dredging and residual cover placement activities. The basis of the SWAC approach is that the exposure domain for receptors is broader than the small areas represented by individual samples, and so an average concentration of the exposure domain should be used. The following methodology was used:

1. Each sediment location was assigned an identifier, so that a SWAC could be calculated.
2. The estimated area of river bottom to be assigned to each sediment location was determined based on polygonal declustering. The method divides the area of influence into polygons, one for each location, with the area of the polygon representing the relative weighting of that sample. The polygons of influence, or Thiessen polygons, are drawn using a geographic information system tool, such that a polygon contains all the area closer to a given sample point than to any other sample point.
3. Upon defining the Thiessen polygons for each sediment sample location, the weighted concentration for each polygon ( $Cw_i$ ) was calculated by multiplying the concentration ( $C_i$ ) by the area ( $A_i$ ), or:

$$Cw_i = C_i \times A_i$$

4. The products of the sediment concentrations and surface areas were summed and the total divided by the total surface area for the creek (or individual reaches) to get a SWAC for the river, or:

$$SWAC_{river} = \frac{\sum_{i=1}^n Cw_i}{A_{river}}$$

The methodology requires that each polygon area be assigned a representative sediment concentration. If a duplicate sample was collected at the location, only the native sample result was used to assign a concentration value. Total PCB and PAH values from the post-remedial action grab sampling were used for the SWAC calculations.

The calculated post-remedial action SWACs for the KK River were 0.44 mg/kg PCBs and 3.7 mg/kg PAHs. Appendix T contains the data and figures supporting the SWAC calculations. Both SWACs were significantly below the remedial action levels of 1 mg/kg for PCBs and 37 mg/kg for PAHs.

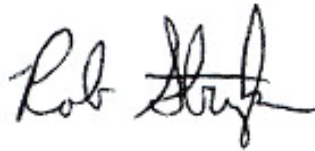

### **4.3 Data Quality Evaluation Memorandum**

CH2M HILL performed a data usability analysis after validated results were obtained from the laboratory. Appendix Q contains the data quality memorandum.

## 5. Certification That Remedy Is Operational and Functional

---

Because of the nature of the construction that was performed, the project team relied upon bathymetric data, poling data, and sample results to determine completion in lieu of a visual inspection. Based on these data, it was concluded that dredging was complete on October 3, 2009, and that the placement of sand and riprap was completed on October 28, 2009.

---

Robert Stryker  
Site Manager/CH2M HILL

## 6. Summary of Project Costs

---

The following is a breakdown of the subcontract costs for implementing the RA under CH2M HILL's Work Assignment with USEPA. Under Task 8, Remedial Action Implementation, the following subcontracts were let, with the corresponding final value:

• Freeman (KK Cell construction)	\$980,211.25
• Gillen (offloading platform and Parcel 424)	\$993,315.50
• Ryba (dredging and residuals management cover placement)	\$8,835,436.89
• City of Milwaukee (utilities relocation)	\$1,054,407.53
• Coleman Engineering Company (confirmation sampling)	\$128,392.50
• City of Milwaukee (scour protection at South 1st Street Bridge)	\$51,656.00
• Rogers Telecom, Inc. (fiber-optic line relocation)	\$556,657.97
• Gillen (Canadian Pacific Railway Bridge scour protection and abandoned pile removal)	\$376,271.50
• USACE (oversight costs for CDF work)	\$10,500.00

CH2M HILL's additional costs for labor, overhead, equipment, travel, pollution liability insurance, program support, and fee were approximately \$3,500,000. The estimated total cost of implementing the RA under CH2M HILL's work assignment was \$16,490,000.

## **Tables**

---

**TABLE 1-1**  
**Completion Dates of Remedial Activities**

<b>Component of Remedy</b>	<b>Status</b>
Great Lakes Legacy Act Project Agreement signed for remedial action	Completed July 2008
Remedial design of KK Cell	Completed July 2008
Remedial design of offloading platform	Completed October 2008
KK Cell construction at CDF	Completed December 2008
Remedial design of dredging	Completed January 2009
Offloading platform construction at CDF	Completed April 2009
Mobilization of dredging subcontractor	Completed June 2009
Relocation of Rogers Telecom fiber optic line	Completed July 2009
Shoreline stabilization of city-owned parcel	Completed September 2009
Relocation of control cables for City-owned bascule bridges	Completed September 2009
Dredging of contaminated sediment	Completed October 2009
Placement of sand and riprap as residuals cover layers	Completed October 2009
Demobilization of dredging subcontractor	Completed November 2009
Dewatering of sediments at CDF	Winter shutdown December 2009; resumed March 2010; completed July 2010
Removal of abandoned piles in KK River	Completed March 2010
Installation of scour protection for Canadian Pacific Railway Bridge	Completed March 2010
Relocation of City-owned fiber optic telecommunications conduit package near S. Kinnickinnic Avenue Bridge	Completed September 2010

**TABLE 2-1****Contractors, Subcontractors, and Parties to Agreements**

Contractor, Subcontractor, or Party to an Agreement	Short Name	Contracted or Subcontracted To, or Party with which in Agreement	Type of Relationship	Role on Project
Barr Engineering (Minneapolis, Minnesota)	Barr	Wisconsin Department of Natural Resources	Contract	Developed remedial design for dredging to final design phase.
Barr Engineering	Barr	CH2M HILL	Subcontract	Consultation or design support as needed during finalization of remedial design.
CH2M HILL, Inc. (Milwaukee, Wisconsin)	CH2M HILL	USEPA	Contract	Performed supplemental remedial design activities and finalized remedial design. Procured subcontractors to perform remedial activities. Provided oversight and document remedial activities.
Freeman Environmental Services (Herron, Illinois)	Freeman	CH2M HILL	Subcontract	Constructed Kinnickinnic Cell at the confined disposal facility.
The Edward E. Gillen Company (Milwaukee, Wisconsin)	Gillen	CH2M HILL	Subcontract	Finalized design and constructed offloading platform at confined disposal facility. Constructed sheet pile wall at City-owned Parcel 424. Designed and constructed scour protection structure for Canadian Pacific Railway's bridge. Removed abandoned piles from project area.
The Edward E. Gillen Company	Gillen	Individual property owners in the project area	Contract	Designed and installed improvements to existing sheet piling for property owners within the project area.
The Edward E. Gillen Company	Gillen	City of Milwaukee	Contract	Located buried City of Milwaukee-owned utilities that crossed the river in the project area.
Ryba Marine Construction Company (Cheboygan, Michigan)	Ryba	CH2M HILL	Subcontract	Performed environmental dredging, disposed of dredged materials at the confined disposal facility, and placed sand and riprap as cover materials and scour protection.
Veolia ES Special Services (Neenah, Wisconsin)	Veolia	Ryba	Subcontract	Conducted bathymetric surveys for payment.
Weston Solutions, Inc. (West Chester, Pennsylvania)	Weston	USEPA	Contract	Performed 3 <sup>rd</sup> -party oversight of bathymetric surveys for payment.
Affiliated Researchers (Oscoda, Michigan)	Affiliated	Weston	Subcontract	Performed 3 <sup>rd</sup> -party oversight of bathymetric surveys for payment.

**TABLE 2-1****Contractors, Subcontractors, and Parties to Agreements**

Contractor, Subcontractor, or Party to an Agreement	Short Name	Contracted or Subcontracted To, or Party with which in Agreement	Type of Relationship	Role on Project
Midwest Maritime Corps (Milwaukee, Wisconsin)	MMC	Port of Milwaukee	Contract	Performed dewatering activities at the CDF prior to CH2M HILL taking over responsibility for dewatering.
CH2M HILL	CH2M HILL	Canadian Pacific (Minneapolis, Minnesota)	Agreement	Provided scour protection for Canadian Pacific's bridge as part of the project.
City of Milwaukee (Milwaukee, Wisconsin)	City of Milwaukee	CH2M HILL	Agreement	Relocated two sets of bridge control cables and one fiber optic conduit package that interfered with dredging activities. Placed riprap as scour protection for scour critical bridges in the project area.
Ryba Marine Construction Company	Ryba	City of Milwaukee	Contract	Excavated old bridge control cables and installed new bridge control cables for S. 1st Street and S. Kinnickinnic Avenue Bridges. Placed riprap as scour protection at the S. 1st Street Bridge.
New Berlin Grading (Waukesha, Wisconsin)	New Berlin	Freeman	Subcontract	Provided labor and earthmoving equipment for work at the CDF.
New Berlin Grading	New Berlin	Ryba	Subcontract	Provided labor and earthmoving equipment for work at the CDF.
Fondriest Environmental, Inc. (Beavercreek, Ohio)	Fondriest	CH2M HILL	Subcontract	Provided turbidity monitoring stations.
Century Fence Company (Pewaukee, Wisconsin)	Century Fence	Gillen	Subcontract	Constructed chain-link fence at City of Milwaukee-owned Parcel 424.
Milwaukee Fence, Inc. (Milwaukee, Wisconsin)	Milwaukee Fence	Ryba	Subcontract	Replaced temporary chain-link fence at the confined disposal facility.
Rogers Telecom (US) Inc. (Tarrytown, New York)	Rogers	CH2M HILL	Agreement	Relocated Rogers' fiber-optic cable conduit, which had interfered with dredging activities.
Gabe's Construction Co., Inc. (Sheboygan, Wisconsin)	Gabe's Construction	Rogers Telecom (US) Inc.	Contract	Installed directional bore and installed Rogers' fiber optic cable conduit within the bore.
Faith Technologies, Inc. (Milwaukee, Wisconsin)	Faith Technologies	City of Milwaukee	Contract	Performed electrical services associated with relocating control cables for S. 1st Street and S. Kinnickinnic Avenue bridges.
CH2M HILL	CH2M HILL	U.S. Army Corps of Engineers, Detroit District	Agreement	Reimbursed USACE for their oversight costs at the CDF.

**TABLE 2-2**  
Summary of Major Remedial Action Events

Date	Activity
July 14, 2008	Project Agreement between WDNR and USEPA for remedial action was signed.
August 20, 2008	Project kickoff media event held at Paul Davis Restoration Property.
August 26, 2008	Work assignment 049-RARA-1408 issued by USEPA to CH2M HILL.
September 19, 2008	Issued notice of award to Freeman Environmental Services, Inc., for KK Cell construction.
October 6, 2008	Issued notice to proceed to Freeman for KK Cell construction.
October 15, 2008	Freeman began construction of the KK Cell and took over responsibility for dewatering.
November 14, 2008	Issued notice of award to the Edward E. Gillen Co. for design and construction of the offloading platform at the CDF.
November 21, 2008	Issued notice to proceed to Gillen for design of the offloading platform.
December 24, 2008	Completed KK Cell construction at the CDF.
February 24, 2009	Gillen began construction of the offloading platform.
March 27, 2009	CH2M HILL began the CDF dewatering to the MMSD manhole.
March 31, 2009	Issued notice of award of the dredging subcontract to Ryba Marine Construction Company.
April 15, 2009	Gillen completed offloading platform construction.
April 21, 2009	Public poster session and open house held for project.
May 3, 2009	Ryba began mobilization activities for dredging.
May 6, 2009	Ryba completed project office set-up.
May 8, 2009	Ryba completed construction of entrance road to the offloading platform at the CDF.
May 13, 2009	Ryba took over responsibility for dewatering from CH2M HILL at the CDF.
May 14, 2009	Issued notice to proceed to Fondriest Environmental, Inc., to set up turbidity monitoring equipment.
May 24, 2009	Ryba completed mobilization of marine dredging equipment.
May 28, 2009	Fondriest installed turbidity meters in the river.
May 29, 2009	Ryba/Veolia ES Special Services completed pre-dredge bathymetric survey.
May 31, 2009	Ryba completed construction of concrete containment area/decontamination pad at CDF.
May 31, 2009	Ryba completed mobilization of CDF offloading equipment.
May 31, 2009	Ryba installed air bubble curtain for turbidity control.
June 2, 2009	Ryba began Phase 1 dredging and offloading of sediment at the CDF.
June 3, 2009	Dredging kickoff media event held at Commercial Heat Treating property.
June 23, 2009	Ryba completed removal of abandoned tugboat ( <i>Edward E. Gillen</i> ) from the project area.
July 2, 2009	Notice of award for design/construction of scour protection for Canadian Pacific Railway's Bridge issued to Gillen.

**TABLE 2-2**  
Summary of Major Remedial Action Events

<b>Date</b>	<b>Activity</b>
July 8, 2009	Ryba completed installation of dragline system at CDF.
July 10, 2009	Ryba completed Phase 1 dredging and started Phase 2 dredging.
July 13, 2009	TSS sampling performed by CH2M HILL to verify correlation between turbidity and TSS.
July 21, 2009	Issued notice of award of the post-dredge confirmation sampling subcontract to Coleman Engineering.
July 21, 2009	Issued notice to proceed to Gillen for installation of sheet piling along shoreline of city-owned parcel 424.
July 22, 2009	Issued notice to proceed to Gillen for design/construction of scour protection for Canadian Pacific Railway's bridge issued to Gillen.
July 29, 2009	Roger's Telecom completed relocation of their fiber optic line which had interfered with dredging activities.
August 6, 2009	Ryba completed Phase 2 dredging in RMU 1.
August 8, 2009	Ryba encountered two drums of unknown contents while dredging. These were transported to the CDF staging area placed in overpack drums, sampled and analyzed, and disposed of offsite.
August 10–13, 2009	CH2M HILL/Coleman Engineering performed sediment confirmation sampling in RMU1.
August 12, 2009	Ryba encountered a small drum of a black, tarry substance while dredging. This was transported to the CDF staging area, placed in an overpack drum, sampled and analyzed, and disposal of offsite.
August 14, 2009	Ryba completed Phase 2 dredging in RMU 2.
August 18 to 22, 2009	CH2M HILL/Coleman performed sediment confirmation sampling in RMU 2.
August 25, 2009	Ryba began Phase 3 dredging (additional dredging based on confirmation sampling results).
August 25, 2009	Gillen began installation of sheet piling along the shoreline of city-owned parcel 424.
September 1, 2009	Ryba completed Phase 2 dredging in RMU 3 and RMU 4.
September 1 to 3, 2009	CH2M HILL/Coleman performed sediment confirmation sampling in RMU3 and RMU 4 (for portions that were accessible).
September 4, 2009	Gillen completed installation of sheet piling along the shoreline of city-owned parcel 424.
September 11, 2009	Ryba/Veolia performed final bathymetric survey for payment in RMU 1.
September 13–16, 2009	City of Milwaukee removed and replaced bridge control cables at S. 1st Street Bridge.
September 14–15, 2009	CH2M HILL/Coleman performed additional sediment confirmation sampling in RMU 3 and RMU 4 (this completed the confirmation sampling in RMU 4).
September 18, 2009	WE Energies performed removal of a guy wire near the Becher Street Bridge that had interfered with dredging activities.

**TABLE 2-2**  
Summary of Major Remedial Action Events

Date	Activity
September 20–30, 2009	City of Milwaukee removed and replaced bridge control cables at S. KK Avenue Bridge.
September 22, 2009	CH2M HILL performed additional sediment confirmation sampling in RMU 3 (this completed the confirmation sampling in RMU 3).
September 25 to 28, 2009	Ryba performed dredging and sand cover placement under CP's bridge.
September 26, 2009	Ryba started sand cover placement (Phase 4 of the dredging activities).
October 2, 2009	Ryba/Veolia performed final bathymetric survey for payment in RMUs 2, 3, and 4.
October 3, 2009	Ryba completed Phase 3 dredging activities (additional dredging based on confirmation sampling results).
October 28, 2009	Ryba completed sand cover placement (Phase 4 of dredging activities).
October 28, 2009	Ryba completed bathymetric survey of sand cover placement areas.
October 29, 2009	Ryba performed riprap placement beneath center span of S. 1st Street Bridge.
October 30, 2009	CH2M HILL disposed of drums encountered while dredging on August 8 and 12 offsite as hazardous waste based on results of characterization sampling.
November 1, 2009	CH2M HILL took over responsibility for dewatering at CDF from Ryba.
November 2, 2009	Cleanup celebration media event held at Paul Davis Restoration property.
November 4, 2009	Ryba completed demobilization activities related to dredging.
December 9, 2009	CH2M HILL shutdown dewatering operations at CDF for the year with the onset of freezing temperatures.
January 11, 2010	Gillen began removal of originally scoped abandoned piles from the project area.
January 21, 2010	Gillen completed removal of originally scoped abandoned piles from the project area.
February 12, 2010	Gillen began installation of scour protection structure against CP's bridge.
March 1, 2010	Gillen completed sheet piling work associated with the scour protection structure against CP's bridge.
March 3, 2010	Gillen began removal of additional abandoned piles from the project area.
March 5, 2010	Gillen completed removal of additional abandoned piles from the project area.
March 17, 2010	Gillen began placement of concrete associated with the scour protection structure against CP's bridge.
March 19, 2010	Gillen completed placement of concrete associated with the scour protection structure against CP's bridge.
March 25, 2010	CH2M HILL resumed dewatering at CDF.
July 18, 2010	Dewatering at CDF completed.
August 2, 2010	City of Milwaukee's contractor, Cablecom, began relocation of fiber optic conduit package near S. KK Avenue Bridge.
September 3, 2010	Cablecom completed relocation of fiber optic conduit package near S. KK Avenue Bridge.

APPENDIX A

# Photographs of Remedial Activities

---

1. Freeman Environmental Services, Inc. (Freeman) and its lower-tiered subcontractor New Berlin Grading (New Berlin) constructed the cell at the CDF that contains the dredged material from the Kinnickinnic River.

2. The Edward E. Gillen Company (Gillen) constructed the offloading platform at the Milwaukee Harbor CDF. In this photo, the pre-constructed waler system for the offloading platform is being lowered into place as the Gillen employees use taglines to control the load and maintain a separation distance from the overhead hazard.

3. Ryba Marine Construction Company (Ryba) designed and constructed the sediment offloading area at the CDF to maximize efficiency. Dredged material was offloaded and placed onto the vibrating grizzly screen, and material passing the screen was pushed down the concrete ramp into the cell. The tower with the guy wire supports is part of the dragline system set up to move materials into the cell.

4. Ryba designed and installed an air curtain at the downstream end of the project area, as the use of silt curtains would have been problematic given the sudden increase in river velocity occurring during storm events and the need to allow boat traffic to pass frequently during dredging operations.

5. A 6-cubic-yard Cable Arm Environmental Level-Cut clamshell bucket was used for removal of sediments.

6. This abandoned tugboat was removed as part of the dredging project.

7. The propeller and driveshaft was removed in one piece.

8. This photo shows Ryba dredging in the northwest corner of the project area.

9. ClamVision® software enabled the dredge crane operator to monitor x, y, z coordinates of the environmental bucket in real time.

10. A Sauerman bucket was used on the dragline system to move sediment into the cell at the CDF.

11. After dredging, Ryba placed sand cover using a specially designed sand spreader for thinner areas (6 to 12 inches) and a conventional clamshell bucket for thicker areas (up to 3 feet). This photo shows the conventional clamshell bucket in use.

12. This is Ryba's specially designed sand spreader for thinner areas (6 to 12 inches).

13. At the CDF, debris was screened, rinsed, and loaded into a rolloff box for disposal.

14. Ryba used a second crane to place riprap.

CH2M HILL Subcontract No. 578 (Purchase Order 811157)  
WA No. 049-RARA-1508, Contract No. EP-S5-06-01

Dear Mr. Pippins:

CH2M HILL is sending this letter and attached figures as documentation of the changes to the QC testing methods and final configuration of the Kinnickinnic (KK) Cell that have been discussed and authorized by the project stakeholders. Specifically, there are three changes to the original design:

- compaction testing
- relocation of central underdrain segment and sump
- reduction in width of perimeter berms

Each of these changes is outlined below.

## **Compaction Testing**

Originally, the specifications for the project required field density testing to show compaction of material for the perimeter berms was meeting 90% of maximum dry density as determined by laboratory standard Proctor tests at a frequency of one nuclear density field test for every 10,000 ft<sup>2</sup> of material placed in each lift. Due to the variability of the initial eight proctor samples collected (maximum dry density ranging between 71 and 105 lbs/ft<sup>3</sup>), CH2M HILL and the project stakeholders discussed alternative methods of verifying that sufficient compaction was being achieved.

After some discussion, it was agreed that soil probe testing being conducted in conjunction with more limited nuclear density field testing and standard Proctor testing would be tried. Nuclear density field testing and standard Proctor testing would be done at ten locations, with the ten tests spread out over the duration of the work. Soil probing would be done at a

frequency of one test per 10,000 ft<sup>2</sup> and also at the same ten locations where the nuclear density field tests and standard Proctor samples were obtained (these ten locations would offer an opportunity to “calibrate” the depth of penetration of the soil probe).

As of December 16, all earthwork has been completed, with the exception of installation of the underdrain system. Soil testing at all ten of the locations has been done, and the results indicated relative compaction between 88 and 102 percent, averaging 97 percent. Soil probing typically indicated 2 to 4 inches of penetration using approximately 100 pounds of force; this was fairly consistent between areas where the field density and Proctor tests were run and other areas.

### **Relocation of Central Underdrain Segment and Sump**

The original drawings showed installation of the central underdrain line directly through the center of the KK Cell. However, installation of the line in this area is not feasible due to the inability to track equipment over the extremely soft material, nor is installation of a sloped drainage line advisable in this area because of the likelihood that it would differentially settle when loaded with sediment in 2009 and no longer be sloped properly. Therefore, Freeman and CH2M HILL have proposed relocation of the line and sump approximately 100 feet to the south where the underlying material is more stable. Project stakeholders have given their acceptance of this approach. The relocation of the central underdrain line and sump is shown on Figure 1.

Freeman will slope the underdrain lines similarly to the way they are shown in the original design; a relocation of 100' will not impact these significantly. Also, Freeman will have the final installed location of the underdrain lines surveyed in and provide this information to CH2M HILL as part of the final record drawings.

### **Reduction in Width of Perimeter Berms**

There was a shortage of material available for creation of the perimeter berms that were required be brought up to +10 ft LWD to create the outside of the KK Cell and foundation for future vertical expansion of the CDF. CH2M HILL and Freeman proposed to obtain additional material by decreasing the overall width of the perimeter berms as shown in Figure 2. This was done as described below:

- Freeman removed 15' from the inside face of the north berm (red line shown on Figure 2). At this point, the berm width (as measured across the flat part at +10 ft LWD) was 125'. The 3:1 slope was maintained down into the KK Cell. The material on the north side of the KK Cell was the best material available for berm construction.
- Freeman then removed 25' from the inside face of the west, south, and east berms (except for the western portion of the southern berm, from which only 15' was removed). The resulting berm width was a minimum of 115', except for a small portion near the southwest corner where the minimum berm width was 105' (shown on Figure 2). The 3:1 slope was maintained down into the KK Cell.
- After completion of this work, an additional 5,000 to 6,000 cubic yards of material was needed to complete the perimeter berm. On November 20, the stakeholders agreed to a

December 16, 2008

removal of up to an additional 25' from the inside face of the west berm, reducing the minimum width to 90'. Freeman completed this work on November 26.

It should be noted that these changes will increase some line item quantities beyond the estimated number in the original subcontract agreement. Revised estimated quantities for the following line items are as follows:

- Excavation Within Cell and Construction of Perimeter Berm - original estimated quantity = 80,000 cubic yards; revised estimated quantity = 89,300 cubic yards
- Installation of Underdrains - original estimated quantity = 3,700 linear feet; revised estimated quantity = 4,000 linear feet
- Local Dewatering - original estimated quantity = 14 days; revised estimated quantity = 34 days

CH2M HILL anticipates that the increase in quantities for these line items will not cause the total subcontract agreement amount of \$1,105,081.47 to be exceeded since actual quantities for other line items will be less than the estimated quantities. CH2M HILL will continue to track estimated quantities as the work progresses.

If you have any questions on these design modifications, please let me know.

Sincerely,  
CH2M HILL

Rob Stryker  
Site Manager

**CONSTRUCTION SEQUENCE AND NOTES**

- LOCATE CORNERS OF OFFLOADING PLATFORM.
  - POSITIVELY LOCATE ANY UTILITIES AND ANY POSSIBLE CONFLICTS BEFORE BEGINNING WORK.
  - CHECK THE NEW SHEETING LINE FOR POSSIBLE OBSTRUCTIONS USING A VIBRATORY PROBE.
  - REMOVE OBSTRUCTIONS AS NECESSARY USING WIRE ROPE OR CHAIN, PILE EXTRACTOR SLEEVE OR CLAMSHELL. THE SELECTED METHOD SHALL BE THE MOST PRACTICAL FOR REMOVAL OF THE ANTICIPATED OBSTRUCTION, AND THE LEAST DISRUPTIVE TO THE DREDGE LINE.
- OBSTRUCTIONS SHALL BE DISPOSED AT A REGULATED FACILITY.
- FABRICATE THE STRUCTURAL BRACING FRAME AS SHOWN ON THE DRAWINGS.
  - DRIVE TEMPORARY FALSEWORK PILES AND SET BRACING FRAME TO FACILITATE SHEET PILE DRIVING.
  - DRIVE NEW STEEL SHEETING ALONG THE PERIMETER OF THE BRACE FRAME ALIGNMENT TO THE BOTTOM ELEVATION SHOWN ON THE DRAWINGS. SEE CROSS-SECTION 1 ON THE DRAWINGS.
  - SECURE THE BRACE FRAME TO THE SHEETING AT ELEV. 7.0.
  - SECURE CLOSURE BETWEEN THE EXISTING FILTER CELL SHEETING AND OFFLOADING PLATFORM SHEETING. CLOSURE DETAIL TO BE DETERMINED IN THE FIELD AFTER OFFLOADING PLATFORM SHEETING IS INSTALLED AND SECURED.
  - DRIVE THE PIPE PILE BOLLARDS TO THE BOTTOM ELEV. SHOWN IN SECTION 5 AT THE LOCATIONS SHOWN.
  - SECURE PIPE PILE BOLLARDS TO FACILITATE BACKFILLING.
  - LOOSE DUMP CELL BACKFILL MATERIAL TO APPROXIMATELY 1 TO 2 FT ABOVE THE LAKE LEVEL AND COMPACT WITH VIBRATORY PLATE OR DRUM COMPACTORS UNTIL NO SETTLEMENT OF THE BACKFILL IS OBSERVED. PLACE THE REMAINING CELL BACKFILL IN 12 TO 18 INCH HORIZONTAL LIFTS AND COMPACT EACH LIFT UNTIL NO SETTLEMENT IS OBSERVED. CONTINUE CELL BACKFILL PLACEMENT TO ELEV. 10.
  - PLACE TYPE C STONE FILL BETWEEN THE EXISTING AND NEW SHEETING AS THE NEW CELL IS BACKFILLED. THE INCREMENTAL FILL LEVELS BETWEEN THE NEW AND EXISTING CELLS AND IN THE NEW CELL SHOULD APPROXIMATELY EQUAL.
  - PLACE AND NON-WOVEN GEOTEXTILE FABRIC IN ACCORDANCE WITH MANUFACTURER GUIDELINES.
  - PLACE AND COMPACT CRUSHED STONE WEARING SURFACE MATERIAL IN 12 INCH THICK LIFTS. WET AND COMPACT UNTIL NO SURFACE DEFLECTION IS OBSERVED. STOP FILL PLACEMENT AT ELEV. 12.0.
  - CONSTRUCT THE MOORING DOLPHINS AT THE LOCATIONS AND PER THE DETAILS SHOWN ON THE DRAWINGS.
  - INSTALL RUBBER FENDERS ON THE SHEETING PER THE DETAILS.

**CONSTRUCTION MATERIALS**

STRUCTURAL STEEL: GRADE 50 UNLESS NOTED OTHERWISE.

**STONE:**

- TYPE A STONE: 2,000 TO 5,200 LBS
- TYPE B STONE: 200 TO 520 LBS
- TYPE C STONE: CHIPS TO 50 LBS
- SHEET PILE CELL BACKFILL: MAXIMUM 6 IN.; 5% P200, MAX.
- CRUSHED STONE WEARING SURFACE: WDOT GRADATION NO. 3 CRUSHED STONE

**NON-WOVEN GEOTEXTILE FABRIC:**

- GRAB STRENGTH: 315 LBS
- PERCENT ELONGATION: 15
- PUNCTURE STRENGTH: 100 LBS
- BURST STRENGTH: 500 PSI
- TRAPEZOID TEAR: 75 LBS
- WEIGHT: 12 OZ/SQ. YD.

---

# Kinnickinnic River Sediment Remediation Project

## Kinnickinnic River Sediment Remediation

Progress Report  
May 2, 2009 to May 8, 2009

# Progress Summary

- 5/2/09 (Saturday) – No work.
- 5/3/09 (Sunday) – Ryba set up the field office and surveyed in the location for the sluice way at the offloading platform.
- 5/4/09 (Monday) – Ryba's subcontractor, New Berlin Grading, graded the north berm of the CDF to design elevation. Ryba continued with the set up of the field office.
- 5/5/09 (Tuesday) – New Berlin finished grading the north berm of the CDF, brought in stone, and built a road along the north berm of the CDF to the offloading platform. Ryba completed the set up of the field office.

## Progress Summary (con't)

- 5/6/09 (Wednesday) – New Berlin completed the construction of the road to the offloading platform and began the construction (stone placement) of the sluice way sub-base.
- 5/7/09 (Thursday) – New Berlin completed the construction of the sluice way sub-base. Ryba had a gate installed in the NW corner of the CDF, and received and staged additional field buildings and materials.
- 5/8/09 (Friday) – Ryba began installing concrete forms for the construction of the concrete sluice way at the offloading platform on the CDF north berm.

## Progress Summary (con't)

- CH2M HILL continues to pump water from the confined disposal facility. It is estimated that 1.5 million gallons of water are pumped from the disposal facility each week.

# Identified Issues/Proposed Resolutions

- None.

# Planned Activities Next Week

- Complete the construction of the sluice way.
- Begin mobilization of dredge equipment to Milwaukee.

# Photographs

Road constructed to the offloading platform (looking to the west).

# Photographs

Offloading platform with sluice way sub-base compacted and at final grade (looking to the northeast).

# Photographs

Forming for the construction of the concrete sluiceway (looking south from the offloading platform).

# Kinnickinnic River Sediment Remediation Project

## Kinnickinnic River Sediment Remediation

Progress Report  
May 9, 2009 to May 15, 2009

# Progress Summary

- 5/9/09 (Saturday) – Ryba placed concrete and continued installing formwork for the construction of the concrete sluice way at the offloading platform on the CDF north berm.
- 5/10/09 (Sunday) – Ryba continued installing formwork for the construction of the concrete sluice way at the offloading platform on the CDF north berm.
- 5/11/09 (Monday) – Ryba placed concrete and continued installing formwork for the construction of the concrete sluice way at the offloading platform on the CDF north berm.

## Progress Summary (continued)

- 5/12/09 (Tuesday) – Ryba placed concrete and continued installing formwork for the construction of the concrete sluice way at the offloading platform on the CDF north berm.
- 5/13/09 (Wednesday) – Ryba placed concrete and continued installing formwork for the construction of the concrete sluice way at the offloading platform on the CDF north berm. Ryba assumed controlled of dewatering the CDF.
- 5/14/09 (Thursday) – Ryba placed concrete and continued installing formwork for the construction of the concrete sluice way at the offloading platform on the CDF north berm.

## Progress Summary (continued)

- 5/15/09 (Friday) – Ryba placed concrete and continued installing formwork for the construction of the concrete sluice way at the offloading platform on the CDF north berm.
- CH2M HILL continued to pump water from the confined disposal facility through Tuesday, May 12, 2009. On Wednesday, May 13, 2009 Ryba assumed control of dewatering the CDF. It is estimated that 1.5 million gallons of water are pumped from the disposal facility each week.

# Identified Issues/Proposed Resolutions

- None.

# Planned Activities Next Week

- Complete the construction of the sluice way.
- Mobilize dredge equipment to Milwaukee.
- Conduct an H&S audit of current field operations.

# Photographs

- Framing the slope of the sluiceway, as it leads south into the CDF, for concrete to be poured

# Photographs

- Concrete being poured into the framed floor of the sluiceway.

# Photographs

- Surface finishing a concrete pour into a framed area of the sluice way floor.

# Kinnickinnic River Sediment Remediation Project

## Kinnickinnic River Sediment Remediation

Progress Report  
May 16, 2009 to May 22, 2009

# Progress Summary

- 5/16/09 (Saturday) – Ryba placed concrete and continued installing concrete forms for the construction of the concrete sluice way at the offloading platform on the CDF north berm.
- 5/17/09 (Sunday) – Ryba continued installing concrete forms for the construction of the concrete sluice way at the offloading platform on the CDF north berm.
- 5/18/09 (Monday) – Ryba placed concrete and continued installing concrete forms for the construction of the concrete sluice way at the off loading platform on the CDF north berm. Ryba began building the CDF decontamination facility. Veolia performed onshore surveying work for utilities.

## Progress Summary (continued)

- 5/19/09 (Tuesday) – Ryba placed concrete and continued installing concrete forms for the construction of the concrete sluice way at the offloading platform on the CDF north berm. Ryba continued with the construction of the DCF decontamination facility. Veolia mobilized to the site to initiate the RTK survey of the KK River. Affiliated Research was onsite to provide 3<sup>rd</sup> party oversight of the KK River survey.
- 5/20/09 (Wednesday) – Ryba placed concrete and continued installing concrete forms for the construction of the concrete sluice way at the offloading platform on the CDF north berm. Veolia initiated the survey of the KK River, but had to stop work due to instrument error.

## Progress Summary (continued)

- 5/21/09 (Thursday) – Ryba placed concrete and continued installing concrete forms for the construction of the concrete sluice way at the offloading platform on the CDF north berm. Veolia received replacement equipment and restarted the survey of the KK River. Veolia divers began the underwater locate of utilities in the river work zone. CH2M HILL conducted a successful Health and Safety audit of the current field activities.
- 5/22/09 (Friday) – Ryba completed the construction of the concrete sluice way at the offloading platform on the CDF north berm. Ryba again attempted to conduct the KK River survey, however the survey, conducted on 5/21 and 5/22, could not be confirmed due to inconsistencies discovered during a QC check at the end of the survey. A new RTK unit will be brought in to verify or troubleshoot the surveying process. Affiliated Research remained on site to provide survey oversight. The Veolia divers successfully completed the utility locate in the KK River.

## Progress Summary (continued)

- Ryba continued to pump water from the confined disposal facility. It is estimated that 1.5 million gallons of water are pumped from the disposal facility each week.

# Identified Issues/Proposed Resolutions

- The RTK survey results can not be verified. A new RTK unit will be brought to the site to verify this week results, or demonstrate that there is an error with the RTK process in this area (potential interferences). If there is an error or interference, from a currently unknown source, the team will work together to suggest, select and implement an equal alternative.

# Planned Activities Next Week

- Mobilize dredge equipment to Milwaukee
- Offload and set up dredge equipment
- Troubleshoot, correct as necessary and complete the survey of the KK River bottom.

# Photographs

- Construction of the decontamination pad at the CDF

# Photographs

- Veolia dive boat with crew setting up to locate and demarcate utilities crossing the KK River.

# Photographs

- Veolia conducting survey of the KK River bottom.

# Kinnickinnic River Sediment Remediation Project

## Kinnickinnic River Sediment Remediation

Progress Report  
May 23, 2009 to May 29, 2009

# Progress Summary

- 5/23/09 (Saturday) – The barge, scow and 2 tugboats arrived; docked at the CDF. Prepared the CDF for the placement and securing of the drip pan.
- 5/24/09 (Sunday) – No field activities were performed on this day.
- 5/25/09 (Monday, Memorial Day) – No field activities were performed on this day.
- 5/26/09 (Tuesday) – A roof was constructed for the decontamination trailer. A handrail was installed on east side of the offloading platform. The access road to the sluice way was re-graded and the construction of the wash table was completed. Veolia worked on establishing controls for the bathymetric survey.

# Progress Summary

- 5/27/09 (Wednesday) - Drip pan was attached to the offloading platform. Ryba attached 500 linear feet of silt curtain to the seawall west of the offloading platform; installed plumbing and related components for the decontamination trailer. Roll off dumpsters were mobilized to the CDF to contain / manage the oversized debris. Veolia used a new receiver to begin a new RTK bathymetric survey of the river.
- 5/28/09 (Thursday) - Ryba started the installation of the grizzly and installed the turbidity meter for CH2M HILL. Legal Video Services shot video of the shoreline/seawall, and of the KK Ave bridge. Veolia continued the bathymetric survey, including the shallow water and pile work.

# Progress Summary

- 5/29/09 (Friday) - Ryba continued working on the grizzly at the CDF, installed Clamvision on the dredge and the personnel retrieval devices on each of the boats. Legal Video Services finished video documentation of the site. Features documented today include the under side of the Becher St bridge, the under side of the 1st Street bridge, and the top of the KK Ave, Becher Street, and 1st street bridges. Veolia continued the bathymetric survey, including the transects underneath the bridges. Veolia began post processing the survey data.

# Identified Issues/Proposed Resolutions

- The RTK survey technology could not be used due to interferences from surrounding metal, buildings, etc. After some troubleshooting, alternative methods were utilized to complete the pre-dredge survey.

# Planned Activities Next Week

- Initiation of the dredging of the KK River
- Complete construction at the CDF
- Place sediment in the CDF.
- Continue CDF Survey
- Continue work on grizzly slide
- Prepare for and install the air and silt curtains
- Unload material handling barges

# Photographs

Offloading Excavator and grizzly screen being assembled at the CDF

# Photographs

Installation of the turbidity curtain east of the Kinnickinnic Avenue Bridge.

**KK River Sediment Remediation  
Weekly Progress Report  
May 30<sup>th</sup> through June 5<sup>th</sup>, 2009**

Contractor: Ryba Marine			
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	213 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	149	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	5	Est. Volume Dredged:	1,800 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	360 CY/Day

### **Progress Summary**

---

May 30<sup>th</sup> (Saturday) - Two additional scows were mobilized to the site. Water tanks were mounted to the top of the decon trailer. Legs on the grizzly were reduced by four feet. Portions of the barges were painted for safety reasons. Survey of the CDF is complete along with photo documentation of existing conditions of the CDF. CH2M HILL gave Ryba a notice to proceed for dredging operations.

May 31<sup>st</sup> (Sunday) - Light lamps were installed for overnight work. Air curtain has been assembled and secured to the mooring dolphins on the east side of the KK Avenue Bridge. Material has been dredged for placement of the air curtain. Water tanks on decon trailer were plumbed. The environmental buckets on the material handling barge were transferred over to the dredging barge. The sediment catch basin was secured beneath the grizzly. The extension pan/lip and debris slide on the west side of grizzly was installed. The water tanks on top of the doghouse were plumbed.

June 1<sup>st</sup> (Monday) - Installed approximately 1000' of silt curtain at the eastern side of KK Avenue Bridge; silt curtain was tied to the sea wall. Maintenance was performed on the crane, barge, and equipment located at the CDF. Offloading platform was cleared in preparation for accepting sediment. Dredging commenced at 2106 hours. Loads held a significant amount of debris trapped at the bottom of the bucket.

June 2<sup>nd</sup> (Tuesday) - Dredging continued, approximately 1.75 scow compartments were filled with sediment which contained random debris, such as bikes and various metal pieces. On-going problems with the turbidity curtain caused dredging operations to halt frequently as sections of the curtain were moved continuously. Compressor has been hooked up at the KK Avenue Bridge to the air curtain (both electrical and discharge piping). Modifications were made to contain sediment and debris from splashing over the containment wall.

June 3<sup>rd</sup> (Wednesday) - Dredging was not performed due to damage to 21 diffusers on the air curtain from moving the silt curtain around. The missing pieces were ordered. An attempt was made to move back to the KK Avenue Bridge, but was delayed due to no communication from the railroad to have the RR bridge swing open and allow the dredge to pass. Dredge was available for media event @ 0900 hours. At 1300 hours the barge was moved to remove the shoreline stabilization structure at RMU 4. Dredging commenced at 1330 hours at the south shore between the railroad bridge and Southwind Marine, inside of existing silt curtain. Approximately two scows were filled, one was staged at St. Mary's Cement. Turbidity meter was malfunctioning; a replacement was ordered for Friday delivery. Repairs were made to the air curtain but the flexible air hose was of inadequate strength to handle the pressure; this hose was replaced.

June 4<sup>th</sup> (Thursday) - The second scow was filled with dredge material from the south shore area between the RR bridge and Southwind Marine and moved alongside the filled scow located at St. Mary's Cement. The tow crew transported both scows to the CDF for unloading. A third scow that was located at Kadinger's property was moved to the dredge area and was filled. The dozer blade will be widened by 4 feet due to difficulty of maintaining the pace of spreading sediment in the CDF. Other options are being reviewed to aide in spreading the sediment. Two scows were offloaded. A mechanical failure on the crane caused cancellation of dredging. Midnight shift was cancelled. Tow crew pushed full scow to the CDF. First compliance water sample was collected at the MMSD discharge manhole and submitted for PCB analysis.

June 5<sup>th</sup> (Friday) - No dredging operations were performed on this day due to failure of the torque converter in the crane. Torque converter was taken out of crane and shipped to Detroit for repair. Tow crew offloaded one scow at CDF. CH2M HILL verified that old timber piles coated with creosote could be disposed as nonhazardous waste. Replacement air diffusers were delivered.

#### **Identified Issues / Proposed Resolutions**

---

- Crane suffered mechanical failure due to a failed torque converter. Torque converter will be rebuilt and reinstalled as soon as possible.
- Dozer was not of adequate size in keeping pace with spreading sediment in the CDF; blade will be widened by 4 feet.

#### **Planned Activities Next Week**

---

- Commence dredging operations
- Review of options of spreading sediment throughout the CDF

Saturday, May 30<sup>th</sup> – East View of river, dredge barge

Monday, June 1<sup>st</sup> – South View of Turbidity Curtain

Monday, June 1 - First Bucket of Sediment Being Dredged

Tuesday, June 2<sup>nd</sup> - Offloading Sediment at the CDF

**KK River Sediment Remediation  
Weekly Progress Report  
June 6<sup>th</sup> through June 14<sup>th</sup>, 2009**

Contractor: Ryba Marine			
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	204 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	149	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	14	Est. Volume Dredged:	10,000 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	710 CY/Day

Note that this progress report covers 9 days. This has been done to shift the end of the weekly reporting period to Sundays; this will enable more timely weekly reports.

### **Progress Summary**

---

June 6<sup>th</sup> (Saturday) - The air curtain supply line was hard piped between the compressor and the curtain to better handle the system's high pressure. The air curtain was tested and is working properly. The crane is non-functioning due to a failure of its torque converter. A new torque converter for the crane is scheduled to arrive tonight and will be installed on Sunday.

June 7<sup>th</sup> (Sunday) - The installation of the new/rebuilt torque converter was completed, but found that the clutch is also in need of re-building or replacement. The midnight crew will be brought in to remove the clutch and to determine rebuilding or replacement options.

June 8<sup>th</sup> (Monday) - The crane clutch has been removed, new parts were obtained and the clutch was re-built. Turbidity readings upstream and downstream of the dredge have been elevated due to recent rainfall. Bridge opening is scheduled for 0200; at that time, the dredge will be moved in to the work area. The MMSD sample was not collected today, as originally scheduled, because dewatering at the CDF was stopped due to excessive rainfall.

June 9<sup>th</sup> (Tuesday) - The repaired crane was moved down to the Southwind Marine during the 0200 railroad bridge opening. Dredging of the slip in front of Southwind Marine was initiated at 0330 and continued until 0900. Dredging activities stood down from 0900 to 1300 to allow other boat traffic and resumed at 1330 to continue through the remainder of the day. One 800 cubic yard scow was offloaded at the CDF today. Dewatering of the KK cell at the CDF resumed (24 hours after rainfall in excess of 0.5 inches). The air curtain continues to be in operation. Collection continues of the turbidity monitoring data on the upstream and downstream sides of the air curtain to evaluate effectiveness. Turbidity, pH, and PCB sampling (MMSD sampling) was conducted at the CDF.

June 10<sup>th</sup> (Wednesday) - Dredging activities continued at Southwind Marine until 0430, the barge's motor for raising, and lowering the anchoring spuds was not operational; specifically, the bearing in the water pump failed. The water pump was removed and a replacement water pump was installed at 2000; dredging resumed at 2100. The 800 cubic yard and 1,000 cubic yard scows were offloaded at the CDF today. Dewatering of the KK cell at the CDF continues. The air curtain continues to be in operation. Collection of turbidity monitoring data on the upstream and downstream sides of the air curtain continues to evaluate effectiveness.

June 11<sup>th</sup> (Thursday) - Dredging activities were completed at Southwind Marine and commenced west of the railroad bridge. At approximately 1700, St. Mary's Cement received a delivery of cement. The ship was blocking the river until 0500 on 6/12/09. Dredging activities were suspended at approximately 2100 after the 600 cubic yard scow was filled. Dredging will resume once the freighter ship departs and scows can be moved. Survey of the slip in front of Southwind Marine was conducted with an average elevation found to be 569 ft. The 800 and 1,000 cubic yard scows were offloaded at the CDF today. Dewatering of the KK cell at the CDF was suspended and pumps were shut off until water level is high enough for the pumps to operate again. The air curtain continues to be in operation. Collection continues of turbidity monitoring data on the upstream and downstream sides of the air curtain to evaluate effectiveness.

June 12<sup>th</sup> (Friday) - Dredging activities commenced at 0500 with the departure of the ship offloading at St. Mary's Cement. Dredging continued west of the railroad bridge removing shallow sediment as they move upstream. A significant amount of debris was encountered along the south shore, just west of Southwind Marine. The debris twice jammed the environmental bucket in the closed position, resulting in 3 hours of downtime. The clam shell bucket was installed and used until the shallow sediment in this area of significant debris was removed. The 800 cubic yard scow and the 600 cubic yard scow were offloaded at the CDF. The sump at the CDF was cleared of accumulated sediment by agitating the water and pumping it back to the CDF. Dewatering of the KK cell at the CDF resumed upon removing the sediment from the sump. The air curtain continues to be in operation. Collection continues of turbidity monitoring data on the upstream and downstream sides of the air curtain to evaluate effectiveness.

June 13<sup>th</sup> (Saturday) - Dredging activities continued west of the 1st Street Bridge removing shallow sediment as they move upstream. The 800 and 1000 cubic yard scows were each offloaded once, and the 600 cubic yard scow was offloaded twice. The pumps at the CDF were operated from 0630 to 1130. Operation was stopped due to minimal water in the CDF. The air curtain continues to be in operation. Collection continues of turbidity monitoring data on the upstream and downstream sides of the air curtain to evaluate effectiveness.

June 14<sup>th</sup> (Sunday) - Dredging activities continued west of the 1st Street Bridge removing shallow sediment as they move upstream. The 800 and 600 yard scows were each offloaded twice, and the 1000 cubic yard scow was offloaded once. The pumps at the CDF were not used due to minimal water in the CDF. The air curtain continues to be in operation. Collection continues of turbidity monitoring data on the upstream and downstream sides of the air curtain to evaluate effectiveness.

### **Identified Issues / Proposed Resolutions**

---

- Torque converter failed; installed new/rebuilt converter
- Water pump failed on barge motor; installed new water pump
- Review proposed options of sediment spreading in CDF

### **Planned Activities Next Week**

---

- Continue dredge activities
- Continue collection of turbidity reading on the upstream and downstream sides of air curtain

Thursday, June 18<sup>th</sup> - 600 Yard Scow

Wednesday, June 17<sup>th</sup> - Sediment Flow from Pad to CDF

Wednesday, June 17<sup>th</sup> - Oil Boom/Silt Curtain near abandoned tugboat

**KK River Sediment Remediation  
Weekly Progress Report  
June 15<sup>th</sup> through June 21<sup>st</sup>, 2009**

	Contractor: Ryba Marine		
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	197 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	149	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	21	Est. Volume Dredged:	15,000 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	710 CY/Day

**Progress Summary**

---

June 15<sup>th</sup> (Monday) - Dredging activities continued west of the S. 1<sup>st</sup> Street Bridge. The 600 and 1000 CY scows were each offloaded twice, and the 800 CY scow was offloaded once; estimated total dredge offload volume was 1,400 CY. Dredging continued west of the S. 1<sup>st</sup> Street Bridge. The discharge pumps at the CDF were operated for approximately one hour to allow collection of the MMSD compliance sample. The sample was sent to the CLP laboratory for PCB analysis.

June 16<sup>th</sup> (Tuesday) - Dredging activities continued west of the S. 1<sup>st</sup> Street Bridge, removing shallow sediment as Ryba moved upstream. The 800 and 600 CY scows were each offloaded once with an estimated dredge offload volume of 600 CY. St. Mary's Cement had a freighter ship offloading from approximately 1:00 a.m. to 10:00 a.m.; which did not allow the transport of any scows to the CDF during this time. The pumps at the CDF were turned on at 10:00 a.m.. The air curtain continued to be in operation.

June 17<sup>th</sup> (Wednesday) - Dredging activities continued west of the S. 1<sup>st</sup> Street Bridge, removing shallow sediment as Ryba moved upstream toward the abandoned tugboat. The 600 CY scow was offloaded twice, and both the 800 and 1000 CY scows were offloaded once, with an estimated dredge offload volume of 1,400 CY. The pumps at the CDF were in operation for approximately one half of the day. The air curtain continued to be in operation.

June 18<sup>th</sup> (Thursday) - Dredging activities continued west of the S. 1<sup>st</sup> Street Bridge, removing shallow sediment as Ryba moved upstream toward the abandoned tugboat. The 800 CY scow was offloaded twice, and both the 600 and 1000 CY scows were offloaded once with an estimated dredge offload volume of 1,500 CY. One cable on the dredge crane boom was replaced, and maintenance was performed on the grizzly screen at the CDF. Both were functioning properly after their respective maintenance. The pumps at the CDF remained in operation the entire day. The air curtain continued to be in operation.

June 19<sup>th</sup> (Friday) - Dredging activities continued west of the S. 1<sup>st</sup> Street Bridge, removing shallow sediment as Ryba moved upstream. The 800 and 1000 CY scows were offloaded with an estimated sediment offload volume of 800 CY. Due to severe weather, dredging and offloading operations were suspended until the weather permitted and it was again safe to proceed. The sumps at the CDF were turned off at 6:00 a.m. due to a heavy rain event. The air curtain continued to be in operation.

June 20<sup>th</sup> (Saturday) - Dredging activities continued west of the S. 1<sup>st</sup> Street Bridge, removing shallow sediment as Ryba moved upstream, just south of the *Edward E. Gillen* (abandoned tugboat). The 600 CY scow was offloaded twice, and the 800 CY scow was offloaded once with an estimated sediment offload volume of 900 CY. Maintenance on the crane was performed resulting in a 4 hour shutdown of dredging operations. The pumps at the CDF were turned back on 24 hours after the heavy rainfall received on 6/19/09. The air curtain continued to be in operation.

June 21<sup>st</sup> (Sunday) - Dredging activities continued west of the S. 1<sup>st</sup> Street Bridge, removing shallow sediment from around the *Edward E. Gillen*. The 800 CY scow was offloaded three times and the 600 CY and 1000 CY scows were each offloaded once; estimated total sediment offload volume was 1,800 CY. The pumps at the CDF were in operation the entire day. The air curtain continued to be in operation.

### **Identified Issues / Proposed Resolutions**

---

Issue: Discharge Pumps at the CDF were non-operational for periods of time due to heavy rain events. Resolution: None at this time, the CDF currently has sufficient volume to manage this additional water.

### **Planned Activities Next Week**

---

- Continue dredge activities
- Anticipate to dismantle and remove the *Edward E. Gillen*.
- Continue collection of turbidity reading on the upstream and downstream sides of air curtain to document it's effectiveness

Wednesday June 17<sup>th</sup> - CDF wash down area - loader with grizzly screen.

Wednesday June 17<sup>th</sup> - *Edward E. Gillen* with silt curtain.

Sunday June 21<sup>st</sup> - Dredge operations with environmental bucket.

**KK River Sediment Remediation  
Weekly Progress Report  
June 22<sup>nd</sup> through 28<sup>th</sup>, 2009**

	Contractor: Ryba Marine		
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	190 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	149	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	28	Est. Volume Dredged:	20,900 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	750 CY/Day

**Progress Summary**

---

June 22<sup>nd</sup> (Monday) - Dredging activities continued and removal began of the *Edward E. Gillen* (abandoned tugboat) using the small clamshell bucket. The 1,000 and 600 CY scows were offloaded at the CDF with a total estimated sediment offload volume of 1,120 CY. A drum was reported floating in the river near the dredging area and the WDNR was notified. The pumps at the CDF remained in operation. The air curtain continued to be in operation. Ryba completed collection of data for the interim survey.

June 23<sup>rd</sup> (Tuesday) - Dredging activities continued with the removal the *Edward E. Gillen*. The propeller and hull of the *Edward E. Gillen* were removed and towed to the CDF on the 1,000 CY scow. The 600 CY scow was filled and towed to the CDF for offloading. The total estimated sediment offload volume was 760 CY. Dredging was suspended at 1900 due to overheating of the crane. The pumps at the CDF remained in operation. The air curtain continued to be in operation.

June 24<sup>th</sup> (Wednesday) - Dredging was shut down most of the day while repairs were made to the crane's heat exchanger. Dredging resumed at approximately 1800. The 800 CY scow with filled with remnants from the *Edward E. Gillen* and sediment from the this area. The 600 CY scow was offloaded at the CDF for a total estimated sediment offload volume of 420 CY. Concrete forms were assembled at the CDF as anchor blocks for the Sauerman dragline bucket. The pumps at the CDF remain in operation. The air curtain continued to be in operation.

June 25<sup>th</sup> (Thursday) - Dredging continued along the west seawall near the *Edward E. Gillen* location. At approximately 2100, the dredging was suspended due to sediment backing up at the CDF. The long stick excavator was used to spread material into the CDF to allow for more material to be offloaded. The pumps at the CDF were shut down temporarily for four hours to make system improvements. The pumps were turned back on at 1500 and remained in operation. The 600, 800, and 1000 CY scows were offloaded for a total estimated sediment offload volume of 1,200 cys. The MMSD discharge compliance sample was collected and sent to the CLP laboratory for PCB analysis. The air curtain continued to be in operation.

June 26th (Friday) - Dredging continued but was suspended in the morning due to sediment transfer difficulties at the CDF. The 1000 CY scow was filled and the 800 and 1000 CY scows were offloaded at the CDF. The total estimated sediment offload volume was 900 CY. The dewatering pumps at the CDF continued to operate. The air curtain remained in operation.

June 27th (Saturday) - Dredging activities continued. The 600 CY scow was filled twice, and the 800 and 1000 CY scows were filled once each. Total estimated sediment offload volume was 800 CY. The dewatering pumps at the CDF continued to operate. Two anchor block forms were constructed (these will be used for the Sauerman dragline). The air curtain remained in operation.

June 28th (Sunday) - Dredging activities continued. The 600 CY scow was filled twice and the 800 and 1000 CY Scows were filled once each. All three were offloaded at the CDF. Total estimated sediment volume offloaded was 1,200 CY. The dewatering pumps at the CDF continued to operate. The air curtain remained in operation. Turbidity readings at the monitoring stations were 5.70 NTUs upstream and 20.35 NTUs downstream at 1900.

### **Identified Issues / Proposed Resolutions**

---

- Due to sediment backup at the CDF, the Sauerman bucket dragline system is being installed next week. The addition of this equipment will greatly increase the efficiency of the sediment offloading at the CDF.

### **Planned Activities Next Week**

---

- Continue dredge activities for one daily shift until the Sauerman bucket dragline system is installed.
- Start installation of Sauerman bucket dragline system at the CDF.
- Continued sampling and analytical testing of the discharge water from the CDF going to MMSD.

June 23<sup>rd</sup>, Propeller from the *Edward E. Gillen*.

June 25<sup>th</sup>, Concrete Anchor Block for the Sauerman Bucket Dragline System.

# KK River Sediment Removal Production Tracking

**KK River Sediment Remediation  
Weekly Progress Report  
June 29<sup>th</sup> through July 5<sup>th</sup>**

Contractor: Ryba Marine			
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	183 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	149	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	35	Est. Volume Dredged:	22,400 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	640 CY/Day

**Progress Summary**

---

June 29<sup>th</sup> (Monday) - Dredging continued between the hours of 0700 and 1900, south of the 90 degree bend. The 600 and 800 CY scows were filled and offloaded at the CDF. Estimated total sediment volume offloaded was 700 CY. The dewatering pumps at the CDF operated throughout the day, except that the pumps were turned off for approximately 9 hours today to make system improvements. A MMSD compliance sample was collected and sent to the CLP laboratory for PCB analysis. The air curtain remained in operation. Turbidity readings, taken at 1900, were 11.8 NTUs upstream and 13.3 NTUs downstream.

June 30<sup>th</sup> (Tuesday) - Dredging continued today, south of the 90 degree bend, in front of Gillen's property. The 600 and 1000 CY scows were filled and offloaded at the CDF. Estimated total sediment volume offloaded today was 800 CY. The dewatering pumps at the CDF operated throughout the day. Construction began on the pads for the Sauerman bucket dragline system. The area for one of the five anchor blocks was excavated. The air curtain remained in operation. Turbidity readings ranged between 6.6 and 14.6 NTUs upstream and 3.5 and 8.7 NTUs downstream.

July 1<sup>st</sup> (Wednesday) - Dredging and offloading activities were suspended on this date. The dewatering pumps at the CDF operated throughout the day. Turbidity at the discharge point was 6.53 NTUs. Excavation and backfill of the four remaining anchor blocks for the Sauerman bucket dragline system were completed, and the I-beam anchor point on the east side of the offloading platform was done as well. Debris washing and movement of sediment into the northern portion of the CDF continued. The air curtain remained in operation. Turbidity readings were between 5.4 and 8.5 NTUs upstream and 2.7 and 6.7 NTUs downstream.

July 2<sup>nd</sup> (Thursday) - No dredging or offloading activities occurred on this date. Anchor points were welded on the east side of the offloading platform. The long stick excavator continued to be used to re-position sediment along the northern portion of the CDF. The dewatering pumps at the CDF operated throughout the day. An access road on the east side of the CDF was completed. The riprap was surveyed on the north side of the Becher Street bridge to refine the final dredging contours in the area. An MMSD compliance sample was collected from the discharge manhole and submitted to

the CLP laboratory for PCB analysis. WE Energies installed an electrical drop for the air curtain.

July 3rd (Friday) - No work was performed on this day.

July 4th (Saturday) - No work was performed on this day.

July 5th (Sunday) - No dredging or offloading activities occurred on this date. Equipment and materials were delivered to the CDF that will be required for sediment and debris management. The dewatering pumps at the CDF operated throughout the day. The air curtain remained in operation. Turbidity readings, taken at 1400, were 9.7 NTUs upstream and 3.3 NTUs downstream.

### **PCB Sample Results**

---

- The two PCB samples collected of water discharged to the MMSD sanitary sewer last week (on June 22 and June 25) were both non-detect for all nine PCB Aroclors.

### **Identified Issues / Proposed Resolutions**

---

- Due to installation activities of the Sauerman bucket dragline system, dredging and offloading were suspended for most of the week. The use of the Sauerman bucket dragline system should eliminate the bottleneck of sediment disposal at the CDF and therefore allow a significant increase the daily average sediment volume removed.

### **Planned Activities Next Week**

---

- Complete installation of Sauerman bucket dragline system at the CDF.
- Continued sampling and analytical testing of the discharge water from the CDF going to MMSD.
- Resume 24 hour operation for sediment removal.

June 29: Pouring cement into forms to create an anchor for the dragline system.

June 30: Cement anchor in place before backfilling

June 28 through July 5, 2009

# KK River Sediment Removal Production Tracking

**KK River Sediment Remediation  
Weekly Progress Report  
July 6<sup>th</sup> through July 12<sup>th</sup>**

Total Dredging Days:	149	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	42	Est. Volume Dredged:	32,500 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	770 CY/Day

**Progress Summary**

---

July 6th (Monday) - Assembly of the Sauerman bucket/dragline system for material management at the CDF continued. Phase 1 dredging resumed south towards the Becher St. Bridge. The 600 CY scow was offloaded twice and the 800 CY scow once at the CDF. An MMSD compliance sample was collected and sent to the CLP laboratory for PCB analysis. The dewatering pumps at the CDF were in continuous operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 7.4 NTUs upstream and 4.6 NTUs downstream.

July 7th (Tuesday) - Assembly of the Sauerman bucket/dragline system for material management at the CDF was completed. Phase 1 dredging continued south towards the Becher St. Bridge. The 600, 800, and 1000 CY scows were each offloaded once at the CDF. The dewatering pumps at the CDF were in continuous operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 8.9 NTUs upstream and 4.4 NTUs downstream.

July 8th (Wednesday) - Phase 1 dredging continued south towards the Becher St. Bridge. The 800 and 1000 CY scows were offloaded once each at the CDF. The Sauerman bucket/dragline system were operated to move sediment at the CDF. The dewatering pumps at the CDF were in continuous operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 11.7 NTUs upstream and 4.7 NTUs downstream.

July 9th (Thursday) - Dredging was suspended for crane maintenance and resumed once completed. Dredging continued south towards the Becher St. Bridge. The 800 and 600 CY scows were offloaded once each at the CDF. An MMSD compliance sample was collected and sent to the CLP laboratory for PCB analysis. The Sauerman bucket/dragline system were operated to move sediment at the CDF. The dewatering pumps at the CDF were in continuous operation. The air curtain remained in continuous operation. Turbidity readings upstream at the monitoring stations averaged 8.1 NTUs upstream and 9.9 NTUs downstream.

July 10th (Friday) - Dredging of a few higher elevated areas downstream of the S. 1<sup>st</sup> St. Bridge was done as well as the start of dredging at the hotspot west of the bridge. The

600 CY scow was offloaded twice, while the 800 and 1000 CY scows were each offloaded once. The Sauerman bucket/dragline system were operated to move sediment at the CDF. The dewatering pumps at the CDF were in continuous operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 6.5 NTUs upstream and 8.6 NTUs downstream.

July 11th (Saturday) - Dredging continued at the hotspot area west of the S. 1<sup>st</sup>. St. Bridge. The 600 and 1000 CY scows were both offloaded twice, while the 800 CY scow was offloaded once. The Sauerman bucket/dragline system were operated to move sediment at the CDF. The dewatering pumps at the CDF were in continuous operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 9.0 NTUs upstream and 10.1 NTUs downstream.

July 12th (Sunday) - Dredging continued at the hotspot west of the S. 1<sup>st</sup> St. Bridge. The 800 CY scow was offloaded three times, while the 600 and 1000 CY scows were offloaded twice. The Sauerman bucket/dragline system were operated to move sediment at the CDF. The dewatering pumps at the CDF were in continuous operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 7.3 NTUs upstream and 8.8 NTUs downstream.

### **PCB Sample Results**

---

All PCB sample results to date continue to be non-detect.

### **Identified Issues / Proposed Resolutions**

---

- The Yarder and Sauerman bucket dragline system was installed and fully operational. The use of this system should eliminate the bottleneck of sediment disposal at the CDF and therefore allow a significant increase the daily average sediment volume removed. Initially, it appears to be working well.

### **Planned Activities Next Week**

---

- Continued sampling and analytical testing of the discharge water from the CDF going to MMSD.
- Continue dredging and final hot spot removal.
- Work on resolution of the post-dredge scour protection measures at the bridges owned by the City of Milwaukee.

July 6<sup>th</sup> -Installation of Yarder (drives Sauerman bucket across CDF cell)

July 5 through July 12, 2009

# KK River Sediment Removal Production Tracking

**KK River Sediment Remediation  
Weekly Progress Report  
July 13<sup>th</sup> through July 19<sup>th</sup>**

	Contractor: Ryba Marine		
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	169 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	149	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	49	Est. Volume Dredged:	46,900 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	960 CY/Day

**Progress Summary**

---

July 13<sup>th</sup> (Monday) - Phase 1 dredging occurred both west and east of the S. 1st St. Bridge to remove high spots and create more draft for the scows. Dredging also occurred west of the S. 1st St. bridge as part of the hot spot area sediment removal. The 600, 800, and 1000 CY scows were each offloaded twice. The dewatering pumps at the CDF were in continuous operation. The Sauerman bucket/dragline system and a long-stick excavator were operated to move sediment at the CDF. A CDF discharge compliance sample was collected and sent to the CLP laboratory for PCB analysis. Waste Management was at the CDF to pick-up 3 roll-offs of dredging wastes; two contained miscellaneous debris and the third contained metal debris. Two empty roll-offs were left onsite. The air curtain remains in continuous operation. Turbidity readings at the monitoring stations averaged 6.1 NTUs upstream and 6.7 NTUs downstream. CH2M HILL collected 20 samples from sample locations downstream of the dredge during active dredging. Samples were collected in 50 foot intervals and sent to the USEPA central regional laboratory (CRL) to be analyzed for total suspended solids (TSS) concentrations.. Data collected will be used to establish a correlation between the real-time turbidity readings and the TSS results.

July 14<sup>th</sup> (Tuesday) - Phase 1 dredging occurred west of the S. 1st St. Bridge and then moved north of the Gillen property. The clamshell bucket was installed and used to remove sediment and debris in this area (the sediment contained a high percentage of sand which necessitated the use of the clamshell bucket). The environmental bucket was temporarily out of service and replacement parts were ordered. The 600 and 800 CY scows were each offloaded twice, and the 1000 CY scow was offloaded once at the CDF. The dewatering pumps at the CDF were shut down temporarily to conduct maintenance on the pipe. The Sauerman bucket/dragline system was operated to move sediment at the CDF. A soil berm was constructed around the Yarder to confine decon water. A small spill (~1 pint engine oil) occurred on the spud barge. Spill prevention control measures were implemented and the National Response Center and local Coast Guard were notified. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 8.0 NTUs upstream and 8.3 NTUs downstream.

July 15<sup>th</sup> (Wednesday) - Dredging occurred west of the S. 1st St. Bridge and north of the Gillen property. The clamshell bucket was used to remove the sediment and debris in this area. The environmental bucket continued to be out of service. The 600 and 1000 CY scows were each offloaded once at the CDF. The dewatering pumps at the CDF were in continuous operation. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 11.3 NTUs upstream and 12.4 NTUs downstream.

July 16th (Thursday) - Dredging occurred north of the Gillen property and along the west wall of the northwest corner of the river bend. The clamshell bucket was used to remove the sediment and debris in these areas. The environmental bucket continued to be out of service. The 800 CY scow was offloaded 3 times at the CDF, the 1000 CY scow was offloaded twice at the CDF, and the 600 CY scow was offloaded once at the CDF. The dewatering pumps at the CDF were in continuous operation. Samples were collected from the discharge point and sent to the CLP and CRL laboratories for PCB and TSS analyses. The Sauerman bucket/dragline system was operated to move sediment at the CDF. A light plant was placed out on the CDF near the Yarder to provide additional lighting at night. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 10.9 NTUs upstream and 12.8 NTUs downstream.

July 17th (Friday) - Dredging occurred west of the Gillen property and then moved north of the Pump House, located just west of the S. 1st St. Bridge (this was an area of higher concentration material that had to be placed lower in the CDF). The clamshell bucket was used to remove debris and sediment in these areas until 1800, when the environmental bucket was installed and sediment removal continued north of the Pump House. The 600, 800, and 1000 CY scows were each offloaded twice at the CDF. The dewatering pumps at the CDF were shut off at 0715 due to lack of water in the sump. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 21.0 NTUs upstream and 10.3 NTUs downstream.

July 18th (Saturday) -Dredging occurred west of S. 1st St. Bridge north of the Pump House. The 600 and 1000 CY scows were each offloaded twice at the CDF. The 800 CY scow was offloaded once at the CDF. The dewatering pumps at the CDF remained off due to lack of water in the sump. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 11.8 NTUs upstream and 11.3 NTUs downstream.

July 19th (Sunday) - Dredging occurred west of S. 1st St. Bridge, in front of Milwaukee Marine. The 600, 800, and 1000 CY scows were each offloaded twice at the CDF. The dewatering pumps at the CDF were in operation but were turned off again due to lack of water in the sumps. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 11.8 NTUs upstream and 11.6 NTUs downstream.

### **PCB Sample Results**

---

All PCB sample results to date continue to be non-detect.

### **Identified Issues / Proposed Resolutions**

---

The environmental bucket was damaged during this week and it took several days to obtain the parts and make the repairs. Areas where the clamshell bucket can be used (i.e., having sand and/or debris) are now limited. Additional replacement parts for the environmental bucket will be maintained onsite to reduce the length of any future down time. Also, dredging near bridges will automatically be done using the clamshell bucket, since that is where a majority of the debris that can damage the environmental bucket is being encountered.

## **Planned Activities Next Week**

---

- Continue dredging in RMU1.
- Continue sampling and analytical testing of the discharge water from the CDF going to MMSD.
- Work on resolution of the post-dredge scour protection measures at the bridges owned by the City of Milwaukee.

Yarder installed for Sauerman bucket/dragline system

Sauerman bucket installed on dragline system

Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	1,100 CY/Day

**Progress Summary**

---

July 20th (Monday) - Dredging occurred north of the Becher Street Bridge, west of the Gillen property. The environmental bucket was used exclusively. The 600 CY scow was offloaded once at the CDF, and the 800 and 1000 CY scows were each offloaded twice. The dewatering pumps at the CDF were in limited operation due to lack of water in the sump. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 12.0 NTUs upstream and 8.3 NTUs downstream.

July 21st (Tuesday) - Dredging occurred north of the Becher Street Bridge, west of the Gillen property. The environmental bucket was used exclusively. The 600, 800 and 1000 CY scows were each offloaded twice at the CDF. The dewatering pumps at the CDF were in limited operation due to lack of water in the CDF. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 16.6 NTUs upstream and 6.5 NTUs downstream.

July 22nd (Wednesday) - Dredging occurred north of the Becher Street Bridge, working in the middle of the channel. The environmental bucket was used exclusively. The 600 and 800 CY scows were each offloaded twice, while the 1000 CY scow was offloaded once. The St. Mary's Cement freighter arrived at approximately 1800; therefore, scow towing operations to the CDF were suspended the rest of the day. The dewatering pumps at the CDF were in limited operation due to lack of water in the CDF. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 15.8 NTUs upstream and 5.0 NTUs downstream.

July 23rd (Thursday) - Dredging occurred north of the Becher Street Bridge, working around the western seawall near the Pier Milwaukee property. The environmental bucket was used exclusively. The 600, 800, and 1000 CY scows were each offloaded twice at the CDF. The St. Mary's Cement freighter departed at approximately 0130 and full towing operations resumed. The dewatering pumps at the CDF were in limited operation due to lack of water in the CDF. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 14.6 NTUs upstream and 10.2 NTUs downstream.

July 24th (Friday) - Dredging occurred north of the Becher Street Bridge, working around the western seawall near the Pier Milwaukee property. The environmental bucket was used exclusively. The crane's turbocharger went down at 0730; the crane

returned to operation at 2330. The 600, 800, and 1000 CY scows were each filled and offloaded once at the CDF. The dewatering pumps at the CDF were in limited operation due to lack of water in the CDF. A roll-off waste container full of debris was removed from the site. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 15.2 NTUs upstream and 6.4 NTUs downstream.

July 25th (Saturday) - Dredging occurred north of the Becher Street Bridge, working around the western seawall near the Pier Milwaukee property and to the north, adjacent to the Paul Davis property. The environmental bucket was used exclusively. The 600, 800, and 1000 CY scows were each offloaded twice at the CDF. The dewatering pumps at the CDF were in limited operation due to lack of water in the CDF. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 17.3 NTUs upstream and 7.8 NTUs downstream.

July 26th (Sunday) - Dredging occurred north of the Becher Street Bridge, working around the 90 degree bend and the middle of the channel between the Gillen and Pier Milwaukee properties. The environmental bucket was used exclusively. The 600, 800, and 1000 CY scows were each offloaded once at the CDF. The St. Mary's Cement freighter arrived at 0900 with a full load. Offloading took approximately 14 hours; dredging and offloading of sediment at the CDF was suspended during this time. The dewatering pumps at the CDF were not in operation due to lack of water in the CDF. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 14.1 NTUs upstream and 10.0 NTUs downstream.

### **PCB Sample Results**

---

All PCB sample results to date continue to be non-detect.

### **Identified Issues / Proposed Resolutions**

---

- The downtime of dredging and offloading due to the offloading of the St. Mary's Cement freighter is a known schedule limitation that the team continues to effectively work around.
- The crane turbocharger repair was equipment downtime, which continues to be a concern. CH2M HILL is working with Ryba to minimize these events.

### **Planned Activities Next Week**

---

- Continue dredging in RMU1.
- Continue sampling and analytical testing of the discharge water from the CDF going to MMSD.
- Work on resolution of the post-dredge scour protection measures at the bridges owned by the City of Milwaukee.

Freighter arriving for delivery at St. Mary Cement

Air Curtain in Operation

July 20 through July 26, 2009

# KK River Sediment Removal Production Tracking

**The KK River Sediment Remediation  
Weekly Progress Report  
July 27<sup>th</sup> through August 2<sup>nd</sup>**

	Contractor: Ryba Marine		
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	162 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	150	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	64	Est. Volume Dredged:	64,800 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	1,000 CY/Day

**Progress Summary**

---

July 27th (Monday) - Dredging occurred north of the Becher Street bridge, working around the 90 degree bend and mid-channel between the Gillen and Pier Milwaukee properties. The environmental bucket was used exclusively. The 600, 800, and 1000 CY scows were each offloaded twice at the CDF. The dewatering pumps at the CDF were in operation from 0700 to 1100. The limited operation was due to lack of water in the CDF. The Sauerman bucket/dragline system was operated to move sediment at the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 14.0 NTUs upstream and 19.8 NTUs downstream.

July 28th (Tuesday) - Dredging occurred north of the Becher Street bridge between the Gillen and Pier Milwaukee properties at the 90 degree bend until approximately 0500 hours, at which time dredging and CDF operations were shut down due to maintenance and repairs needed on the Sauerman bucket/dragline system. The 1,000 and 600 CY scows were offloaded at the CDF. The dewatering pumps at the CDF were in operation from 0800 to 1030 and were shut down due to lack of water in the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 13.6 NTUs upstream and 19.8 NTUs downstream.

July 29th (Wednesday) - Dredging activities were suspended due to the Sauerman bucket/dragline system being down for repair. Preventative maintenance was performed on all equipment. The dewatering pumps were operational for 4 hours. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 5.2 NTUs upstream and 11.2 NTUs downstream.

July 30th (Thursday) - Dredging activities were suspended due to the Sauerman bucket/dragline system being down for repair. Preventative maintenance was performed on all equipment. The dewatering pumps were not operated due to lack of water in the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 5.5 NTUs upstream and 12.0 NTUs downstream.

July 31st (Friday) - Dredging activities were suspended due to the Sauerman bucket/dragline system being down for repair. The dewatering pumps were operational for 4 hours. The air curtain remained in continuous operation. Turbidity

readings at the monitoring stations averaged 4.7 NTUs upstream and 12.5 NTUs downstream.

August 1st (Saturday) - Dredging activities were suspended due to troubleshooting and maintenance on the "Yarder" engine (drive unit for the Sauerman bucket/dragline system). The dewatering pumps were operational for 4 hours. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 5.6 NTUs upstream and 15.6 NTUs downstream.

August 2nd (Sunday) - Dredging activities were suspended due to troubleshooting and maintenance on the "Yarder" engine. The dewatering pumps were not operated. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 4.5 NTUs upstream and 12.8 NTUs downstream.

### **PCB Sample Results**

---

All PCB sample results of water at the CDF to date continue to be non-detect.

### **Identified Issues / Proposed Resolutions**

---

The radiator on the Yarder engine was damaged on July 29<sup>th</sup> and a replacement engine was delivered to the CDF on July 31<sup>st</sup>. The replacement engine was installed but it was not powerful enough to move the Sauerman bucket through the material at the CDF. The original engine was reinstalled with the radiator from the replacement engine, but there are still some electrical compatibility issues being worked out. The repairs are anticipated to be completed early next week.

The mooring dolphins at the CDF are experiencing significant wear and tear due to the heavy and constant use. Ryba will suggest repairs that could be made.

### **Planned Activities Next Week**

---

- Finish repairs on the Yarder.
- Resume and complete dredging in RMU1.
- Start dredging in RMU2.
- Continue sampling and analytical testing of the discharge water from the CDF going to MMSD.

**Mooring dolphin at the CDF offloading platform showing significant wear.**

**Offloading a material scow at the CDF**

July 27 through August 2, 2009

# KK River Sediment Removal Production Tracking

Subcontract  
Completion Date  
October 28

**The KK River Sediment Remediation  
Weekly Progress Report  
August 3<sup>rd</sup> through August 9<sup>th</sup>**

	Contractor: Ryba Marine		
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	155 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	150	Est. Total Dredge Volume	167,500 CY
Dredging Days to Date:	71	Est. Volume Dredged:	74,700 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	1,050 CY/Day

**Progress Summary**

---

August 3<sup>rd</sup> (Monday) - Maintenance was completed on the Sauerman/Yarder dragline system. CDF operations resumed at approximately 1930 hours. Dredging operations resumed at approximately 1830 hours on the northeast side of the Becher Street Bridge. The 600 CY scow was offloaded once at the CDF. The dewatering pumps at the CDF were in operation for approximately 3 hours and turned back off due to lack of water. An MMSD compliance sample was collected and submitted to the CLP laboratory for PCB analysis. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 7.9 NTUs upstream and 9.8 NTUs downstream.

August 4<sup>th</sup> (Tuesday) - Dredging was performed on the north side of the Becher Street Bridge. The 600 and 1000 CY scows were offloaded twice and the 800 CY scow was offloaded once at the CDF. The dewatering pumps at the CDF were not in operation due to lack of water. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 16.1 NTUs upstream and 14.7 NTUs downstream.

August 5<sup>th</sup> (Wednesday) - Dredging continued on the north side of the Becher Street Bridge. The 800 CY scow was offloaded twice and the 600 and 1000 CY scows were each offloaded once at the CDF. The dewatering pumps at the CDF were in operation for approximately 4 hours. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 21.7 NTUs upstream and 10.8 NTUs downstream.

August 6<sup>th</sup> (Thursday) - Dredging continued north of the Becher Street Bridge. RMU 1 was completed. Dredging continued in RMU 2 near the 90 degree bend in the river. The 600 and 1000 CY scows were offloaded twice and the 800 CY scow was offloaded once at the CDF. The dewatering pumps at the CDF were in operation for approximately 4 hours. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 31.5 NTUs upstream and 8.1 NTUs downstream.

August 7<sup>th</sup> (Friday) - Dredging in RMU 2 continued west of the S. 1st Street Bridge near the 90 degree bend. The 800 CY scow was offloaded twice and the 600 and 1000 CY scows were offloaded once at the CDF. Dredging and CDF operations were suspended

due to the arrival of the St. Mary's Cement vessel. Dredging and CDF operations resumed at approximately 1500 hours. The dewatering pumps at the CDF were not in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 16.7 NTUs upstream and 14.5 NTUs downstream.

August 8th (Saturday) - Dredging continued west of the S. 1st Street Bridge near the Gillen property in RMU 2. The 600, 800, and 1000 CY scows were each offloaded twice at the CDF. Dredging and CDF operations were suspended for approximately 2.5 hours due to severe weather with lightning. The project area received approximately 0.5 inches of rainfall during this storm event. The dewatering pumps at the CDF were not in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 23.1 NTUs upstream and 24.0 NTUs downstream.

At 1505 hours on August 8, two 55-gallon drums were encountered while dredging. One drum was not intact and released what appeared to be a paint-like substance into the river. The dredge crew placed both drums from the environmental bucket into one of the pockets of the scows. An estimated 20 gallons of material were released. The dredge crew immediately initiated its spill response plan and deployed boom curtain to contain the material. The incident was reported to the National Spill Hotline and Milwaukee Station of the U.S. Coast Guard. Much of the paint formed large globules on the surface of the water and was collected by the dredge crew using a pike pole. All recovered materials, including the two drums, were transferred to the CDF and staged and contained on the wash pad with 4 mil poly sheeting. Dredging operations were shut down for approximately 3 hours to address the release and perform the appropriate spill response.

August 9th (Sunday) - Dredging continued west of the 1st Street Bridge near the Gillen property in RMU 2. The CDF pumps were operated. An interim survey of RMU 1 was performed. While repairing the dragline, the hydraulic line which raises the boom burst. An attempt was made to find a replacement/repair facility open on Sunday that was capable of fixing the problem, but none could be found. Dredging and CDF operations were shutdown until a repair could be made. Turbidity readings at the monitoring stations averaged 32.2 NTUs upstream and 32.5 NTUs downstream.

### **PCB Sample Results**

---

All PCB sample results of water at the CDF to date continue to be non-detect.

### **Identified Issues / Proposed Resolutions**

---

Due to continued downtime resulting from equipment failure, Ryba is providing a written corrective action plan that includes acquiring and stocking additional replacement equipment and motors.

### **Planned Activities Next Week**

---

- Finish repairs on the Yarder.
- Finalize survey in RMU1
- Finalize dredging in RMU2.
- Continue discharging water from the CDF.

Paint on scow from drum encountered while dredging on August 8.

Turtle found in dredged material at CDF on August 6.

August 3 through August 9, 2009

# KK River Sediment Removal Production Tracking

Subcontract  
Completion Date  
October 28

Project Volume = 167,500 CY

**The KK River Sediment Remediation  
Weekly Progress Report  
August 10th through August 16th**

	Contractor: Ryba Marine		
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	148 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	150	Est. Total Dredge Volume	157,500 CY (revised)
Dredging Days to Date:	78	Est. Volume Dredged:	96,400 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	1,250 CY/Day

**Progress Summary**

August 10th (Monday) - The dragline cable was replaced on the Sauerman bucket/dragline system and the unit returned to service at approximately 1445 hours, 4 hours after repairs were initiated. The 600 and 800 CY scows were each offloaded once at the CDF. Dredging continued in front of the Edward E. Gillen Company's property in RMU2. At approximately 2100 hours, St. Mary's cement received a freighter containing half a load of cement. The freighter was offloaded until 0500 on August 11, 2009. During this time, scows were not transported between the dredge and the CDF. The dewatering pumps at the CDF were not in operation due to limited water in the CDF. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 68.7 NTUs upstream and 24.0 NTUs downstream, reflecting a precipitation event. In addition, Coleman Engineering and CH2M HILL completed confirmation sediment sampling from the first location in RMU1. Samples were submitted for PCBs, PAHs, and grain size analyses.

August 11th (Tuesday) - Dredging continued in the mid-channel of RMU2 in front of the Edward E Gillen Company and the Milwaukee Marine, Inc. properties. The 600 and 1000 CY scows were offloaded twice at the CDF and the 800 cubic yard scow was offloaded once at the CDF. The St. Mary's freighter departed at 0515 hours. Scow towing operations, which were suspended while the freighter offloaded cement, resumed at 0600. The dewatering pumps at the CDF were in operation for approximately 13 hours. An MMSD compliance sample was collected and sent to the CLP laboratory for PCB analysis. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 85.4 NTUs upstream and 15.9 NTUs downstream, reflecting a precipitation event. Coleman Engineering and CH2M HILL completed sampling at 9 locations as part of the post-dredge confirmation sediment sampling in RMU1.

August 12th (Wednesday) - Dredging continued through the final cuts west of the S. 1<sup>st</sup> Street Bridge in front of the Paul Davis property in RMU2. The 600 and 800 CY scows were each offloaded twice at the CDF and the 1000 CY scow was offloaded three times at the CDF. One roll-off container containing approximately 5 tons of steel was transported to Miller recycling. The dewatering pumps at the CDF were on for 11 hours this day. The air curtain remained in continuous operation. Turbidity readings at the

monitoring stations averaged 123.4 NTUs upstream and 11.2 NTUs downstream, reflecting a malfunction with the upstream turbidity monitoring station. Coleman Engineering and CH2M HILL continued with confirmation sediment sampling from RMU1.

August 13th (Thursday) - Dredging continued through the final cuts west of the S. 1<sup>st</sup> Street Bridge in front of the Milwaukee Marine and Edward E Gillen properties within RMU2. The 600 CY scow was offloaded three times at the CDF and the 800 and 1000 CY scows were each offloaded twice at the CDF. The drums of paint and tar-like substance that was dredged from the river last week were placed in over-pack drums at the CDF decontamination pad. The dewatering pumps at the CDF remained on this day. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 192.7 NTUs upstream and 9.4 NTUs downstream, reflecting a malfunction with the upstream turbidity monitoring station. Coleman Engineering and CH2M HILL completed confirmation sediment sampling from RMU1.

August 14th (Friday) - Dredging continued through the final cuts west of the S. 1<sup>st</sup> Street Bridge in front of the Milwaukee Marine and the Edward E Gillen properties within RMU2. The 600, 800 and 1000 CY scows were offloaded twice at the CDF. The dewatering pumps at the CDF remained on this day. The air curtain remained in continuous operation. The upstream turbidity monitoring station was recalibrated on this day as well. Turbidity readings at the monitoring stations averaged 186.8 NTUs upstream and 12.8 NTUs downstream, reflecting the malfunction with the upstream turbidity monitoring station.

August 15th (Saturday) - Dredging continued through the final cuts west of the S. 1<sup>st</sup> Street Bridge in RMU2. The 600 CY scow was offloaded once at the CDF, and the 800 and 1000 CY scows were offloaded twice each at the CDF. Between 1600 and 2000, dredging operations stopped while the dredge boom cable was repaired. The dragline cable on the Sauerman bucket/dragline system repaired during this time as well. The dewatering pumps at the CDF were on 19 hours this day. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 30.4 NTUs upstream and 12.9 NTUs downstream.

August 16th (Sunday) - Due to a pin/hydraulic cylinder failure on the material handler, CDF operations were suspended at 0700 hours. Dredging operations ceased at approximately 1100 hours. All three scows were filled and staged for offloading upon repair of the material handler. Ryba could not get the necessary parts for the material handler until Monday, August 17th. The dewatering pumps at the CDF were not in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 22.5 NTUs upstream and 8.6 NTUs downstream.

## **PCB Sample Results**

---

All PCB sample results of water at the CDF to date continue to be non-detect.

## **Identified Issues / Proposed Resolutions**

---

Due to continued downtime resulting from equipment failure, Ryba provided a written corrective action plan that includes acquiring and stocking additional replacement

equipment and motors. CH2M HILL has reviewed this plan and is working with Ryba to further enhance the contingency planning.

### **Planned Activities Next Week**

---

- Continue final dredging in RMU3 and initiate final dredging in RMU4.
- Continue to transfer the sediment into the CDF.
- Continue discharging water from the CDF into the sanitary sewer.
- Analyze and assess what additional dredging, is needed within RMUs 1 and 2.
- Analyze and assess what sand cover is needed within RMUs 1 and 2.

Drum of tar encountered during dredging in RMU1

Dredging Days to Date:	85	Est. Volume Dredged:	114,000 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	1,350 CY/Day

**Progress Summary**

---

August 17th (Monday) - Dredging operations had been suspended the previous day due to repairs needed on the material handler. The repairs were completed at 1900. The St. Mary's Cement freighter arrived at 1400, so no dredging was performed this day. The 600 and 800 CY scows were each offloaded once at the CDF. The dewatering pumps at the CDF were not in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 13.7 NTUs upstream and 9.4 NTUs downstream.

August 18th (Tuesday) - Dredging operations resumed under the S. 1<sup>st</sup> Street Bridge in RMU2 once the St. Mary's Cement freighter departed at 0300. The Sauerman bucket/dragline system was used to move dredged materials into the CDF. The 600, 800, and 1000 CY scows were each offloaded once at the CDF. The dewatering pumps at the CDF were in operation. An MMSD compliance sample was collected and sent to the laboratory for PCB analysis. Coleman Engineering and CH2M HILL conducted post dredge confirmation sampling in RMU2. Confirmation samples were submitted for PCB, PAH, and grain size analyses. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 11.1 NTUs upstream and 9.0 NTUs downstream.

August 19th (Wednesday) - Dredging continued beneath the S. 1<sup>st</sup> Street Bridge and then moved east of the bridge along the northern seawall. The 1000 CY scow was offloaded twice and the 600 and 800 CY scows were each offloaded once at the CDF. The dewatering pumps at the CDF were in operation from 0700 hours to 1800 hours. Coleman Engineering and CH2M HILL continued with post dredge confirmation sampling in RMU2. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 15.3 NTUs upstream and 6.5 NTUs downstream.

August 20th (Thursday) - Dredging continued east of the S. 1<sup>st</sup> Street Bridge along the northern seawall in RMU3. The 800 CY scow was offloaded three times and the 600 and 1000 CY scows were each offloaded twice at the CDF. The Sauerman bucket/dragline system was shut down for repair of the drive chain at 2130. The dewatering pumps at the CDF were in operation. Coleman Engineering and CH2M HILL continued with the post dredge confirmation sampling in RMU2. The air curtain

remained in continuous operation. Turbidity readings at the monitoring stations averaged 18.2 NTUs upstream and 14.9 NTUs downstream.

August 21st (Friday) - Dredging continued east of the S. 1<sup>st</sup> Street Bridge within RMU3. The 800 CY scow was offloaded once and the 600 and 1000 CY scows were each offloaded twice at the CDF. The repairs to the Sauerman bucket/dragline system were completed and CDF operations resumed at 0500. The dewatering pumps at the CDF were in operation for a short time and then turned off due to lack of water in the CDF. Coleman Engineering and CH2M HILL continued with the post dredge confirmation sampling in RMU2. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 14.0 NTUs upstream and 13.1 NTUs downstream.

August 22nd (Saturday) - Dredging continued east of the S. 1<sup>st</sup> Street Bridge within RMU3. The 800 CY scow was offloaded three times and the 600 and 1000 CY scows were each offloaded twice at the CDF. The dewatering pumps at the CDF were in operation and then turned off due to lack of water in CDF. Coleman Engineering and CH2M HILL completed the post dredge confirmation sampling in RMU2. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 19.3 NTUs upstream and 11.8 NTUs downstream.

August 23rd (Sunday) - Dredging continued between the S. 1<sup>st</sup> Street Bridge and the railroad bridge in RMU3. The 600 CY scow was offloaded three times and the 800 and 1000 CY scows were each offloaded twice at the CDF. The dewatering pumps at the CDF were in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 14.6 NTUs upstream and 12.9 NTUs downstream.

### **PCB Sample Results**

---

All PCB sample results of water at the CDF to date continue to be non-detect.

### **Identified Issues / Proposed Resolutions**

---

CH2M Hill continues to work with Ryba to further enhance their contingency plan.

### **Planned Activities Next Week**

---

- Continue discharging water from the CDF.
- Continue final dredging in RMU3 and initiate final dredging in RMU4.
- Continue to transfer the sediment into the CDF.
- Continue discharging water from the CDF to the sanitary sewer.
- Analyze and assess what additional dredging is needed within RMUs 1 and 2.
- Analyze and assess what additional sand cover is needed within RMUs 1 and 2.

Dredging Days to Date:	92	Est. Volume Dredged:	128,000 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	1,400 CY/Day

**Progress Summary**

---

**August 24th (Monday)** - Dredging continued eastward toward the railroad bridge in RMU3. The 600, 800, and 1000 CY scows were each offloaded twice at the CDF. Waste Management was onsite to pick-up one full roll-off containing wood debris from the CDF. The St. Mary's Cement freighter arrived at 2300 hours, which shut down dredging operations for the day. The dewatering pumps at the CDF were in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 20.8 NTUs upstream and 15.2 NTUs downstream.

**August 25th (Tuesday)** - Dredging continued near the railroad bridge in RMU3. The 800 and 1000 CY scows were each offloaded once at the CDF. St. Mary's Cement freighter departed at 0815 hours. Towing operations resumed after the freighter departed. Gillen performed preparatory work for installation of sheet piling at city-owned parcel 424 (between the railroad bridge and Kinnickinnic Avenue) between 0700 and 1100. At approximately 2000 hours, a thunderstorm moved through the area and all dredging, towing, and CDF operations were suspended due to lightning. Operations resumed at 2145 hours. The dewatering pumps at the CDF were in operation. An MMSD discharge compliance sample was collected and submitted for PCB analysis. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 14.5 NTUs upstream and 15.6 NTUs downstream.

**August 26th (Wednesday)** - The initial dredge pass in RMU3 was completed; clean-up dredging began in RMU1 based upon the post dredge confirmation sampling results. The 1000 and 600 CY scows were offloaded twice and the 800 CY scow was offloaded once at the CDF. The dewatering pumps at the CDF were not in operation due to excessive rainfall received late on the previous day. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 22.0 NTUs upstream and 26.8 NTUs downstream.

**August 27th (Thursday)** - Clean-up dredging continued in RMU1. The 800 CY scow was offloaded twice and the 600 and 1000 CY scows were offloaded once at the CDF. All CDF operations were suspended for approximately 9 hours to troubleshoot and repair the drive train on the Sauerman bucket/dragline system. The CDF dewatering pumps were in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 24.8 NTUs upstream and 16.1 NTUs downstream.

**August 28th (Friday)** - Clean-up dredging continued in RMU1 near the Becher Street Bridge. Dredging operations were temporarily suspended due to Gillen working at Parcel 424; when this work was finished, dredging operations resumed. CDF operations had been suspended for repair of the Sauerman bucket/dragline system and resumed when the repair was completed. The 600, 800, and 1000 CY scows were offloaded once at the CDF. The CDF dewatering pumps were in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 14.2 NTUs upstream and 10.3 NTUs downstream.

**August 29th (Saturday)** - Clean-up dredging continued in RMU1, just north of the Becher Street Bridge. The 600 and 1000 CY scows were offloaded twice and the 800 CY scow was offloaded once at the CDF. The CDF dewatering pumps were not in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 32.6 NTUs upstream and 7.7 NTUs downstream.

**August 30th (Sunday)** - Clean-up dredging continued in RMU1; dredging was also done in RMU3 to remove high spots. The 600, 800, and 1000 CY scows were each offloaded once at the CDF. The St. Mary's Cement freighter arrived at 1200 and departed at midnight.. Towing operations to the CDF were suspended during this time, and maintenance activities were performed at the CDF, including installation of a new cable for the Sauerman bucket/dragline system. The CDF dewatering pumps were not in operation. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 13.1 NTUs upstream and 14.0 NTUs downstream.

### **PCB Sample Results**

---

All PCB sample results of water at the CDF to date continue to be non-detect.

### **Identified Issues / Proposed Resolutions**

---

- CH2M Hill received and approved Ryba's contingency plan.
- There is a guy wire running just downstream of the Beecher Street Bridge. It supports an electrical service pole at the Pier Milwaukee property. Post dredge confirmation sampling in RMU1 identified contaminated sediment remaining that will require removal of this guy wire to access. CH2M HILL is currently working with WE Energies to have the pole supported and the guy wire removed temporarily so dredging and sand placement can occur.

### **Planned Activities Next Week**

---

- Continue discharging water from the CDF.
- Continue final dredging in RMU3 and initiate final dredging in RMU4.
- Continue to transfer the sediment into the CDF.
- Continue discharging water from the CDF.

Guy wire near the Beecher Street Bridge requiring removal for clean-up dredging

**The KK River Sediment Remediation  
Weekly Progress Report  
August 31st through September 6th**

	Contractor: Ryba Marine		
Contract Time (to substantial completion):	279 Days	Contract Time Remaining:	127 Days
Dredging Start Date:	6/1/09	Est. Dredging End Date:	10/28/09
Total Dredging Days:	150	Est. Total Dredge Volume	157,500 CY (revised)
Dredging Days to Date:	99	Est. Volume Dredged:	137,000 CY
Required Production Rate:	1,100 CY/Day	Avg. Production Rate:	1,400 CY/Day

**Progress Summary**

**August 31st (Monday)** - Dredging continued in the high spots in RMU3 near the railroad bridge. The 800 and 1000 CY scows were each offloaded twice and the 600 CY scow was offloaded once at the CDF for an estimated offloaded volume of 2,604 cubic yards. The St. Mary's cement freighter departed at 0100 hours. All towing and CDF offloading operations resumed. Gillen began mobilizing equipment and materials for the sheet pile installation at Parcel 424. The CDF dewatering pumps were in operation for 12 hours. An MMSD compliance sample was collected and sent to the CLP laboratory for PCB analysis. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 6.0 NTUs upstream and 11.4 NTUs downstream.

**September 1st (Tuesday)** - Clean-up dredging began in RMU2. The 600 and 1000 CY scows were each offloaded twice and the 800 CY scow was offloaded once at the CDF for an estimated offloaded volume of 2,480 cubic yards. CH2M HILL and Coleman Engineering collected confirmation samples from parts of RMU3 and RMU4 for PCB, PAH, and grain size analyses. Gillen continued to prepare for sheet pile installation at Parcel 424. The CDF dewatering pumps were in operation for 9 hours. An additional MMSD compliance sample was collected to incorporate a field duplicate and sent to the CLP laboratory for PCB analysis. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 13.7 NTUs upstream and 8.6 NTUs downstream.

**September 2nd (Wednesday)** - Clean-up dredging continued in RMU 2. The 600 and 800 CY scows were each offloaded twice and the 1000 CY scow was offloaded once at the CDF for an estimated offloaded volume of 2,356 cubic yards. CH2M HILL and Coleman Engineering collected confirmation samples from parts of RMU3 and RMU4 for PCB, PAH, and grain size analyses. Gillen began installing sheet piling at Parcel 424 near the railroad and KK Avenue bridges. The CDF dewatering pumps were in operation for 5 hours. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 11.9 NTUs upstream and 4.0 NTUs downstream.

**September 3rd (Thursday)** - Clean-up dredging continued in RMU 2. The 600, 1000 and 800 CY scows were each offloaded once at the CDF for an estimated offloaded volume of 1,488 cubic yards. CH2M HILL and Coleman Engineering completed confirmation samples from parts of RMU3 and RMU4. Gillen continued installing sheet piling at Parcel 424 near the railroad and KK Avenue bridges. The CDF dewatering pumps were in operation for 9 hours. The air curtain remained in continuous operation. Turbidity readings at the monitoring stations averaged 9.7 NTUs upstream and 2.1 NTUs downstream.

**September 4th (Friday)** - Dredging activities were suspended in RMU2 for the holiday weekend. The CDF crew worked until approximately 1000, and offloaded the 600 CY scow. The CDF pumps were operational for 3 hours. Gillen finished driving sheets in Parcel 424 and then removed their equipment from KK Avenue to allow for roadway opening for the weekend. Turbidity readings at the monitoring stations averaged 11.0 NTUs upstream and 5.3 NTUs downstream.

**September 5th (Saturday)** - No work was performed on this date.

**September 6th (Sunday)** - No work was performed on this date.

### **PCB Sample Results**

# 1. Introduction

Representatives of CH2M HILL, the U.S. Environmental Protection Agency (USEPA), the Wisconsin Department of Natural Resources (WDNR), the Port of Milwaukee, and the City of Milwaukee (“City”) participated in a meeting on January 21, 2009. There were a variety of topics discussed, but one issue in particular involved the proximity and depth of dredging near the city-owned bridges. The existing plan is to dredge to within 10 feet of bridge abutments and down to a channel elevation of 557.5 feet International Great Lakes Datum 1985 (IGLD85). The bottom channel dredge elevation at the downstream part of the project area is currently planned to be 560.5 feet IGLD85, but might be lowered to 557.5 feet IGLD85 to maintain a consistent channel level.

There are three City-owned bridges in the vicinity of the part of the Kinnickinnic River to be dredged. The Becher Street Bridge is located at the upstream end of the project area. Dredging will not occur beneath this bridge, but will commence approximately 15 feet downstream. The S. 1st Street Bridge is located in the middle of the project area, and the South Kinnickinnic Avenue Bridge is located at the downstream end of the project area. Both the S. 1st Street Bridge and the South Kinnickinnic Avenue Bridge are double-leaf bascule bridges. A rotating railroad bridge owned by Canadian Pacific Railway (CP) is also present in the project area just upstream of the South Kinnickinnic Avenue Bridge.

During discussions with the City, the City questioned how the proposed dredging project might affect the city bridges. It was agreed by all parties present at the meeting that the completion of a scour analysis by CH2M HILL would assist in this evaluation.

## 1.1 Purpose and Need

This scour report presents the methods used in determining scour potential at the Becher Street Bridge, S. 1st Street Bridge, and Kinnickinnic Avenue Bridge and provides results of each analysis (a site location map of the bridges is included in Appendix A). Each scour analysis determines scour potential for each of the bridges during a 100-year storm event. If an individual analysis reveals scour potential that may affect the integrity of a bridge abutment or pier, scour protection may be warranted.

# 2. Bridge History

## 2.1 Becher Street Bridge

The Becher Street Bridge is located in Section 5, Township 6N, Range 22E in the City of Milwaukee, Milwaukee County, Wisconsin. The bridge was built on Becher Street in 1967 and spans approximately 300 feet across the Kinnickinnic River.

## 2.2 S. 1st Street Bridge

The S. 1st Street Bridge is located in Section 5, Township 6N, Range 22E in the City of Milwaukee, Milwaukee County, Wisconsin. The bridge was built on S. 1st Street in 1955 and spans approximately 300 feet across the Kinnickinnic River.

## 2.3 Kinnickinnic Avenue Bridge

The Kinnickinnic Avenue Bridge is located in Section 4, Township, 6N, Range 22 in the City of Milwaukee, Milwaukee County, Wisconsin. The bridge was built on Kinnickinnic Avenue in the late 1990s and spans approximately 300 feet across the Kinnickinnic River.

The physical characteristics of the above listed three bridges are presented in Appendix B.

## 3. Previous Scour Analysis

Previous scour analyses were performed on the Becher Street Bridge and S. 1st Street Bridge in 1997 by Ayers and Associates for the City of Milwaukee (1997 Analysis). The results from these analyses will be compared to the current analyses performed by CH2M HILL (2009 Analysis).

### 3.1 Becher Street Bridge

A scour analysis and report entitled *Scour Evaluation Report, Bridge No. P-40-794, W. Becher Street Over Kinnickinnic River in Milwaukee, Wisconsin* was completed in 1997 by Ayres Associates for the City of Milwaukee. The Becher Street Bridge scour analysis was run using a 100-storm discharge of 7,000 cubic feet per second (cfs), a  $D_{50}$  of 0.085 millimeters (mm) and a  $D_{90}$  of 0.40 mm (“ $D_{50}$ ” refers to a particle size of which 50 percent of the material by weight is finer). Results from this analysis are shown in Table 1.

**TABLE 1**  
Becher Street Scour Analysis Results (1997)

Element	Long Term Scour (ft)	Contraction Scour (ft)	Local Scour (ft)	Total Scour Depth (ft)	Total Scour Width (ft)
Left Abutment	0 <sup>1</sup>	12.7 <sup>1</sup>	21.2 <sup>1</sup>	33.9 <sup>1</sup>	85.0 <sup>1</sup>
Right Abutment	0 <sup>1</sup>	12.7 <sup>1</sup>	6.5 <sup>1</sup>	19.2 <sup>1</sup>	26.0 <sup>1</sup>
Pier No. 1	0	12.7	4.3	17.0	17.0
Pier No. 2	0	12.7	4.3	17.0	17.0

### 3.2 S. 1st Street Bridge

A scour analysis and report entitled *Scour Evaluation Report, Bridge No. P-40-830, S. First Street Over Kinnickinnic River in Milwaukee, Wisconsin* was completed in 1997 by Ayres Associates for the City of Milwaukee. The S. 1st Street Bridge scour analysis was also run using a 100-storm discharge of 7,000 cfs, a  $D_{50}$  of 0.085 mm and a  $D_{90}$  of 0.40 mm. Results from this analysis are shown in Table 2.

<sup>1</sup> Although scour depths and elevations were calculated in the 1997 and 2009 Hydrologic Engineering Center – River Analysis System (HEC-RAS) models for the Becher Street Bridge abutments, in actuality, they are protected from scour by riprap and the numbers reflect scour potential if the riprap were not present.

**TABLE 2**  
S.1st Street Scour Analysis Results (1997)

Element	Long Term Scour (ft)	Contraction Scour (ft)	Local Scour (ft)	Total Scour Depth (ft)	Total Scour Width (ft)
Left Abutment	0	16.9	0	16.9	146
Right Abutment	0	16.9	0	16.9	146
Pier No. 1	0	16.9	32.1	49.0	167

### 3.3 Kinnickinnic Avenue Bridge

A previous scour analysis was not available for the Kinnickinnic Avenue Bridge.

## 4. Methods

The 2009 bridge scour analysis was performed using a Hydrologic Engineering Center – River Analysis System (HEC-RAS) hydraulic model of the Kinnickinnic River, which was obtained from the Southeastern Wisconsin Regional Planning Commission (SEWRPC) to use as a baseline model (SEWRPC Model) for the scour analysis. The SEWRPC Model contained Kinnickinnic River cross-sections and bridge cross-sections within an approximate 8-mile stretch of the Kinnickinnic River. Kinnickinnic River and bridge cross-sections relevant to the project area were used to develop the new bridge scour model (CH2M HILL Model) performed by CH2M HILL. Elevations used for the CH2M HILL model were adjusted from IGLD 85 to the National Geodetic Vertical Datum 1929 used by SEWRPC in the baseline model. All elevations used in this report are in IGLD85.

The 100-year storm discharge value used for the following scour analyses was obtained from the existing SEWRPC model. The soils data was obtained from subsurface investigations performed in 2002 of the Kinnickinnic River. The soils report documenting the results is entitled the *Report of: Subsurface Investigation for Kinnickinnic River, Milwaukee, Wisconsin*. This report was prepared for the U.S. Army Corps of Engineers, Detroit District, by Coleman Engineering. Each bridge location had a separate soil boring in which the  $D_{50}$  and  $D_{95}$  were determined. The soil particle size used for the analysis of each bridge was based on  $D_{50}$  and  $D_{95}$  particle sizes at the proposed dredge depth.

## 5. Scour Analysis Results

### 5.1 Becher Street Bridge

The Becher Street Bridge scour analysis, Scenario 1, was run using a 100-year storm discharge of 10,500 cfs, a  $D_{50}$  of 0.55 mm, and a  $D_{95}$  of 3.7 mm for an elevation of 556.5 feet IGLD85 (this includes overdredge) throughout the upper part of the reach, increasing to 559.5 feet IGLD85 (this includes overdredge) just upstream of the Kinnickinnic River Bridge. Table 3 presents the results from this analysis.

**TABLE 3**  
Becher Street Scour Analysis Results (Scenario 1, 2009)

Element	Long Term Scour (ft)	Contraction Scour (ft)	Local Scour (ft)	Total Scour Depth (ft)	Dredge Elevation (IGLD85)	Scour Depth Elevation (IGLD85)	Total Scour Width (ft)

Pier No. 2	0	10.1	3.6	13.7	557 <sup>2</sup>	543	54.9

The Becher Street Bridge scour analysis, Scenario 2, was run using a 100-year storm discharge of 10,500 cfs, a D<sub>50</sub> of 0.55 mm, and a D<sub>95</sub> of 3.7 mm for an elevation of 556.5 feet IGLD85 (this includes overdredge) throughout the entire reach. Table 4 presents the results from this analysis.

## 5.2 S. 1st Street Bridge

The S. 1st Street Bridge scour analysis was run using a 100-year storm discharge of 10,500 cfs, a D<sub>50</sub> of 0.016 mm, and a D<sub>95</sub> of 0.18 mm for an elevation of 556.5 feet IGLD85 (this includes overdredge) throughout the upper part of the reach, increasing to 559.5 feet IGLD85 (this includes overdredge) just upstream of the Kinnickinnic River Bridge. Table 5 presents the results from this analysis.

<sup>1</sup> Although scour depths and elevations were calculated in the 1997 and 2009 HEC-RAS models for the Becher Street Bridge abutments, in actuality they are protected from scour by riprap and the numbers reflect scour potential if the riprap were not present.

<sup>2</sup> Dredging is not occurring beneath the Becher Street Bridge; however, headcutting has conservatively been assumed to extend upstream underneath the bridge equal to the depth of the maximum dredge cut.

**TABLE 5**

### 5.3 Kinnickinnic Avenue Bridge

The Kinnickinnic Avenue Bridge scour analysis was run using a 100-year storm discharge of 11,300 cfs, a D<sub>50</sub> of 0.35 mm, and a D<sub>95</sub> of 17.0 mm for an elevation of 556.5 feet IGLD85 (this includes overdredge) throughout the upper part of the reach, increasing to 559.5 feet IGLD85 (this includes overdredge) just upstream of the Kinnickinnic River Bridge. Table 7 presents the results from this analysis.

**TABLE 7**  
Kinnickinnic Avenue Scour Analysis Results (Scenario 1, 2009)

Element	Long Term Scour (ft)	Contraction Scour (ft)	Local Scour (ft)	Total Scour Depth (ft)	Dredge Elevation (IGLD85)	Scour Depth Elevation (IGLD85)	Total Scour Width (ft)
Left Abutment	0	0.0	39.8	39.8	563 <sup>1</sup>	523	79.5
Right Abutment	0	0.0	45.5	45.5	563 <sup>1</sup>	517	91.1

<sup>1</sup> Dredge elevation is estimated to be approximately 3 feet higher than the channel bottom elevation because dredging will not be done within 10 feet of the piers and abutments, and the long-term slope of the sediment will be approximately 3:1 (H:V).

The Kinnickinnic Avenue Bridge scour analysis was run using a 100-year storm discharge of 11,300 cfs, a  $D_{50}$  of 0.35 mm, and a  $D_{95}$  of 17.0 mm for an elevation of 556.5 feet IGLD85 (this includes overdredge) throughout the entire reach. Table 8 presents the results from this analysis.

**TABLE 8**

Right Abutment	0	0.0	46.8	46.8	560 <sup>1</sup>	513	93.6

Figures showing scour analysis for each of the scenarios are provided in Appendix C.

## 6. Scour Analysis Comparison

The 1997 analysis for both of the Becher Street and S. 1<sup>st</sup> Street bridges was compared to the 2009 analysis run using a discharge of 7,000 cfs, a dredge depth of 556.5 feet IGLD85 throughout the channel, and the same sediment particle sizes used in the 1997 analysis. This was done in an attempt to isolate the effects that dredging alone would have on the scour potential for each bridge. Tables 9 and 10 present a side-by-side comparison of these analyses.

### 6.1 Becher Street Bridge

Table 9 presents the Becher Street Bridge scour analysis comparison.

**TABLE 9**  
Becher Street Bridge Scour Analysis Comparison

Element	Long Term Scour (ft)		Contraction Scour (ft)		Local Scour (ft)		Total Scour Depth (ft)		Dredge Elevation (IGLD85)		Scour Depth Elevation (IGLD85)		Total Scour Width (ft)	
	1997	2009	1997	2009	1997	2009	1997	2009	1997	2009	1997	2009	1997	2009

## 6.3 Kinnickinnic Avenue Bridge

No previous scour analysis for the Kinnickinnic Avenue Bridge has been made available to CH2M HILL; therefore, no comparison to previous analyses can be made.

## 7. Discussion

Scour potential for the 2009 analyses are based on D<sub>50</sub> and D<sub>95</sub> of sediment samples taken at the approximate dredge elevation in borings closest to each bridge. In reality, the D<sub>50</sub> and D<sub>95</sub> will not remain constant throughout the entire scour depth.

The 2009 Becher Street Bridge scour analysis predicted a scour potential of up to 54 feet at the abutments; however, the Becher Street Bridge has riprap serving as scour protection along both abutments. Thus, scour is not anticipated around the abutments.

The 2009 S. 1st Street Bridge scour analysis predicted potential scour down to an elevation of 520 feet; however, based on the boring logs, there is a stiff clay soil at elevation 545.3 feet IGLD85. From the dredge elevation of 556.5 feet used in the model, there is approximately 11.2 feet of soft sediment that may be scoured away before the clay is encountered. It is

<sup>1</sup> Dredge elevation is estimated to be approximately 3 feet higher than the channel bottom elevation because dredging will not be done within 10 feet of the piers and abutments, and the long-term slope of the sediment will be approximately 3:1 (H:V).

anticipated that the maximum scour potential would not occur as the clay layer would act as a scour barrier.

The 2009 Kinnickinnic Avenue Bridge scour analysis predicted potential scour down to an elevation of 513 feet. Soil boring logs indicate primarily organic silt and sandy sediment down to an elevation of 531.3 feet IGLD85, where glacial tills comprised of stiff clay and silt were encountered. the soil boring stopped. It is anticipated that the maximum scour potential would not occur as the clay and silt layer would act as a scour barrier.

## **8. Conclusions**

The 2009 scour analyses were performed to determine to what extent the planned dredging of the Kinnickinnic River will impact the scour potential near the City-owned bridges. Secondly, the impact to scour potential due to a change in dredge elevation from 560.5 to 557.5 feet IGLD85 at the downstream end of the project was evaluated. A bridge-by-bridge evaluation follows.

### **8.1 Becher Street Bridge**

Although no dredging will occur beneath the Becher Street Bridge, it has been conservatively assumed that headcutting will occur and the post-dredge sediment elevations will extend upstream beneath the bridge. In actuality, if headcutting does occur, it will likely diminish somewhat before the bridge is reached. Also, both abutments of the bridge have been protected by riprap already, and potential scour calculated for these structures do not take this fact into account. Therefore, scour is unlikely to occur at all around the abutments.

Maximum potential scour depth at the piers was calculated to be 17 feet in 1997 and 15 feet in 2009 (using the 1997 flowrate and sediment particle sizes). Using the larger 100-year flowrate and location specific sediment particle size, maximum potential scour depth was determined to be 14 feet (the downstream dredge elevation made little difference). While the potential scour elevation was lower than the 1997 elevation due to headcutting (553 feet IGLD85 versus 542 feet IGLD85), the lack of change in magnitude of scour potential suggests that additional scour protection measures are unnecessary at the Becher Street Bridge.

### **8.2 S. 1<sup>st</sup> Street Bridge**

Post-dredge elevations at the S. 1<sup>st</sup> Street Bridge will be 570 at the left abutment and 560 at the right abutment and pier. Maximum potential scour depths at these three structures as calculated in 1997 were 17, 17, and 49 feet, respectively, and in 2009 (using the 1997 flowrate and sediment particle sizes) were 39, 34, and 35 feet, respectively. Potential scour elevations at these three structures as calculated in 1997 were 553, 550, and 511 feet IGLD85, respectively, and in 2009 (using the 1997 flowrate and sediment particle sizes) were 531, 527, and 525 feet IGLD85, respectively. While the potential scour elevations for the abutments are significantly lower due to the dredging work, the potential scour elevation for the pier is actually 14 feet higher. Using the larger 100-year flowrate and location specific sediment

particle size, the potential scour elevations were somewhat lower than using the 1997 parameters (538, 525, and 520 feet IGLD85, respectively), but the most critical potential scour at the pier was still less in magnitude than the 1997 calculation (2009 elevation of 520 feet IGLD85 versus 1997 elevation of 511 feet IGLD85). Therefore, it appears that the dredging project will not increase the most critical potential scour at the S. 1<sup>st</sup> Street Bridge.

### **8.3 Kinnickinnic Avenue Bridge**

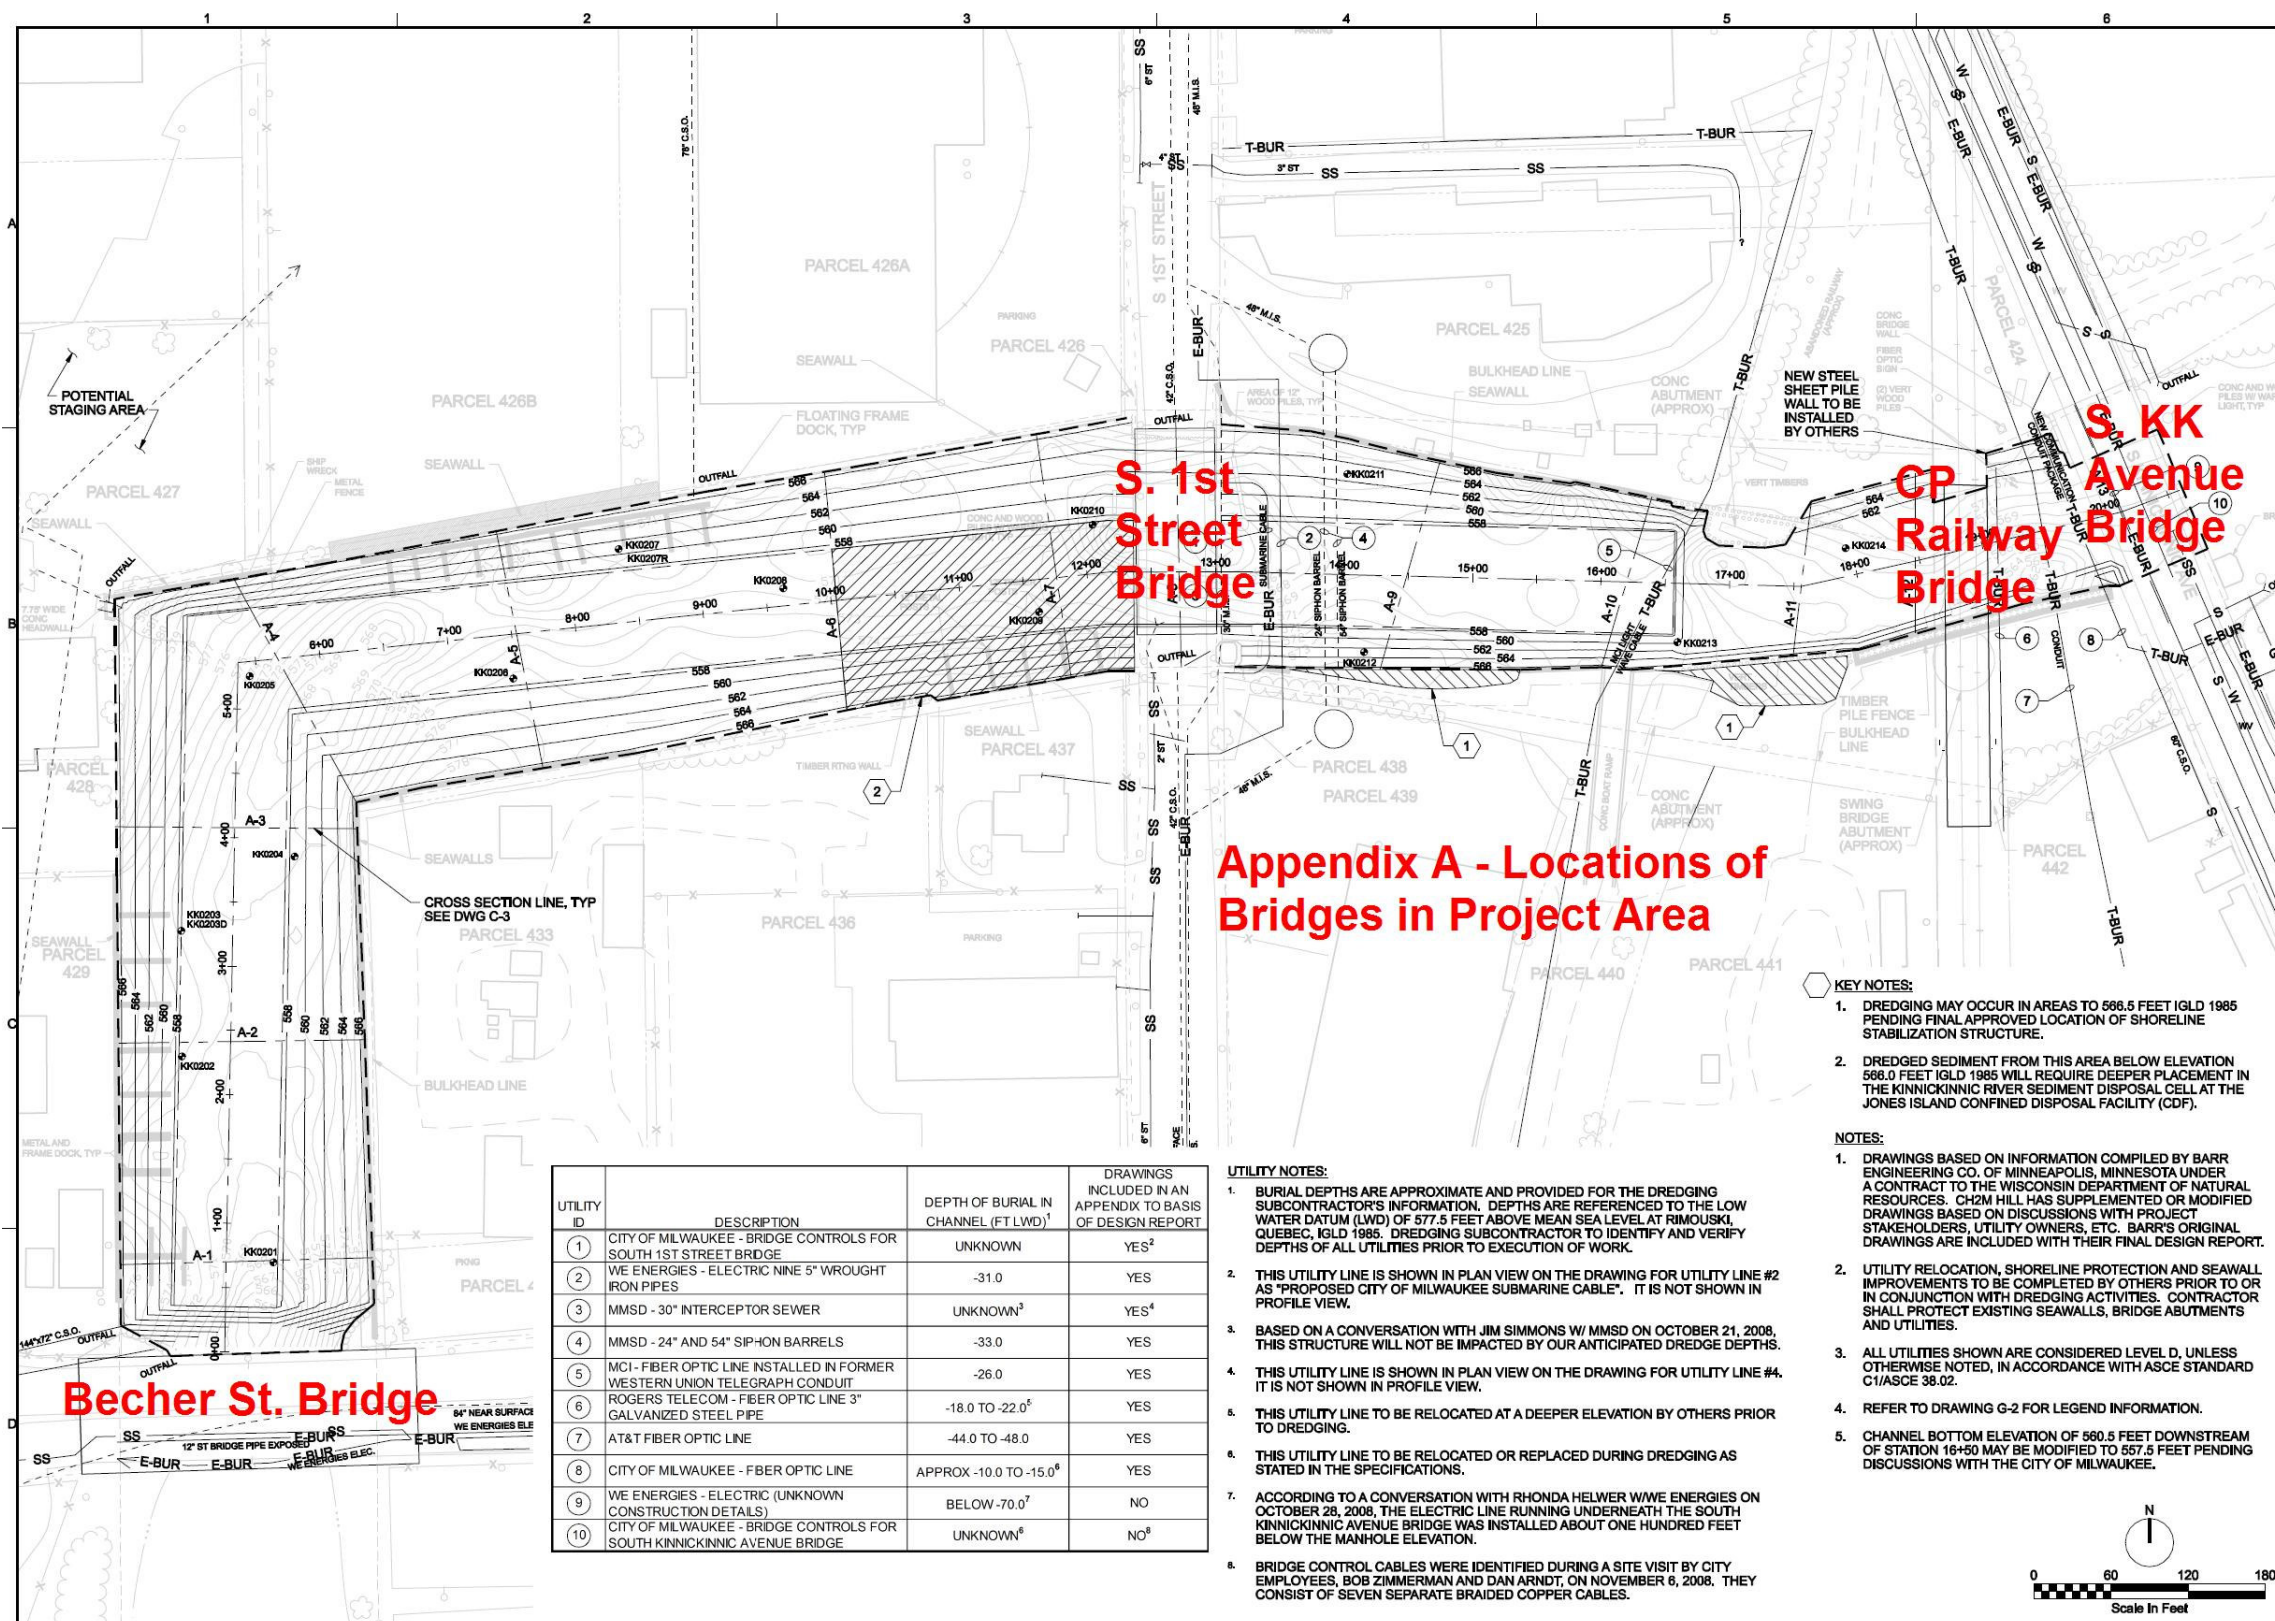

Post-dredge elevations at the Kinnickinnic Avenue Bridge will be 563 feet IGLD85 at the abutments with the 560 feet IGLD85 dredge elevation scenario and 560 feet IGLD85 with the 557 feet IGLD85 dredge elevation scenario. No previous scour analysis was provided to CH2M HILL for this bridge.

Maximum potential scour depths at the left and right abutments were calculated to be 40 and 46 feet, respectively, with the 560 feet IGLD85 dredge elevation scenario and 41 and 47 feet, respectively, with the 557 feet IGLD85 dredge elevation scenario. The potential scour elevations for the left and right abutments were calculated to be 523 and 517 feet IGLD85, respectively, with the 560 feet IGLD85 dredge scenario and 519 and 513 feet IGLD85, respectively, with the 557 feet IGLD85 dredge scenario. Although no previous scour analysis was available, the bridge itself had not been deemed scour critical according to a conversation with Jeff Dellemann with the City of Milwaukee. At these potential scour depths, it likely is scour critical.

It appears that the dredging project will impact the scour potential at the Kinnickinnic Avenue bridge significantly, regardless of the downstream dredge depth. Therefore, the 557 feet IGLD85 dredge depth scenario can be used, and implementation of scour protection measures after dredging, most likely in the form of riprap armoring, appears justified.

## Appendix A - Locations of Bridges in Project Area

UTILITY ID	DESCRIPTION	DEPTH OF BURIAL IN CHANNEL (FT LWD) <sup>1</sup>	DRAWINGS INCLUDED IN AN APPENDIX TO BASIS OF DESIGN REPORT
1	CITY OF MILWAUKEE - BRIDGE CONTROLS FOR SOUTH 1ST STREET BRIDGE	UNKNOWN	YES <sup>2</sup>
2	WE ENERGIES - ELECTRIC NINE 5" WROUGHT IRON PIPES	-31.0	YES
3	MMSD - 30" INTERCEPTOR SEWER	UNKNOWN <sup>3</sup>	YES <sup>4</sup>
4	MMSD - 24" AND 54" SIPHON BARRELS	-33.0	YES
5	MC1 - FBER OPTIC LINE INSTALLED IN FORMER WESTERN UNION TELEGRAPH CONDUIT	-26.0	YES
6	ROGERS TELECOM - FBER OPTIC LINE 3" GALVANIZED STEEL PIPE	-18.0 TO -22.0 <sup>5</sup>	YES
7	AT&T FIBER OPTIC LINE	-44.0 TO -48.0	YES
8	CITY OF MILWAUKEE - FBER OPTIC LINE	APPROX -10.0 TO -15.0 <sup>6</sup>	YES
9	WE ENERGIES - ELECTRIC (UNKNOWN CONSTRUCTION DETAILS)	BELOW -70.0 <sup>7</sup>	NO
10	CITY OF MILWAUKEE - BRIDGE CONTROLS FOR SOUTH KINNICKINNIC AVENUE BRIDGE	UNKNOWN <sup>8</sup>	NO <sup>8</sup>

**UTILITY NOTES:**

- BURIAL DEPTHS ARE APPROXIMATE AND PROVIDED FOR THE DREDGING SUBCONTRACTOR'S INFORMATION. DEPTHS ARE REFERENCED TO THE LOW WATER DATUM (LWD) OF 577.5 FEET ABOVE MEAN SEA LEVEL AT RIMOUSKI, QUEBEC, IGLD 1985. DREDGING SUBCONTRACTOR TO IDENTIFY AND VERIFY DEPTHS OF ALL UTILITIES PRIOR TO EXECUTION OF WORK.
- THIS UTILITY LINE IS SHOWN IN PLAN VIEW ON THE DRAWING FOR UTILITY LINE #2 AS "PROPOSED CITY OF MILWAUKEE SUBMARINE CABLE". IT IS NOT SHOWN IN PROFILE VIEW.
- BASED ON A CONVERSATION WITH JIM SIMMONS W/ MMSD ON OCTOBER 21, 2008, THIS STRUCTURE WILL NOT BE IMPACTED BY OUR ANTICIPATED DREDGE DEPTHS.
- THIS UTILITY LINE IS SHOWN IN PLAN VIEW ON THE DRAWING FOR UTILITY LINE #4. IT IS NOT SHOWN IN PROFILE VIEW.
- THIS UTILITY LINE TO BE RELOCATED AT A DEEPER ELEVATION BY OTHERS PRIOR TO DREDGING.
- THIS UTILITY LINE TO BE RELOCATED OR REPLACED DURING DREDGING AS STATED IN THE SPECIFICATIONS.
- ACCORDING TO A CONVERSATION WITH RHONDA HELWER W/WE ENERGIES ON OCTOBER 28, 2008, THE ELECTRIC LINE RUNNING UNDERNEATH THE SOUTH KINNICKINNIC AVENUE BRIDGE WAS INSTALLED ABOUT ONE HUNDRED FEET BELOW THE MANHOLE ELEVATION.
- BRIDGE CONTROL CABLES WERE IDENTIFIED DURING A SITE VISIT BY CITY EMPLOYEES, BOB ZIMMERMAN AND DAN ARNDT, ON NOVEMBER 6, 2008. THEY CONSIST OF SEVEN SEPARATE BRAIDED COPPER CABLES.

**KEY NOTES:**

- DREDGING MAY OCCUR IN AREAS TO 566.5 FEET IGLD 1985 PENDING FINAL APPROVED LOCATION OF SHORELINE STABILIZATION STRUCTURE.
- DREDGED SEDIMENT FROM THIS AREA BELOW ELEVATION 566.0 FEET IGLD 1985 WILL REQUIRE DEEPER PLACEMENT IN THE KINNICKINNIC RIVER SEDIMENT DISPOSAL CELL AT THE JONES ISLAND CONFINED DISPOSAL FACILITY (CDF).

**NOTES:**

- DRAWINGS BASED ON INFORMATION COMPILED BY BARR ENGINEERING CO. OF MINNEAPOLIS, MINNESOTA UNDER A CONTRACT TO THE WISCONSIN DEPARTMENT OF NATURAL RESOURCES. CH2M HILL HAS SUPPLEMENTED OR MODIFIED DRAWINGS BASED ON DISCUSSIONS WITH PROJECT STAKEHOLDERS, UTILITY OWNERS, ETC. BARR'S ORIGINAL DRAWINGS ARE INCLUDED WITH THEIR FINAL DESIGN REPORT.
- UTILITY RELOCATION, SHORELINE PROTECTION AND SEAWALL IMPROVEMENTS TO BE COMPLETED BY OTHERS PRIOR TO OR IN CONJUNCTION WITH DREDGING ACTIVITIES. CONTRACTOR SHALL PROTECT EXISTING SEAWALLS, BRIDGE ABUTMENTS AND UTILITIES.
- ALL UTILITIES SHOWN ARE CONSIDERED LEVEL D, UNLESS OTHERWISE NOTED, IN ACCORDANCE WITH ASCE STANDARD C1/ASCE 38.02.
- REFER TO DRAWING G-2 FOR LEGEND INFORMATION.
- CHANNEL BOTTOM ELEVATION OF 560.5 FEET DOWNSTREAM OF STATION 16+50 MAY BE MODIFIED TO 557.5 FEET PENDING DISCUSSIONS WITH THE CITY OF MILWAUKEE.

**NOTE:** 

EXISTING OVERHEAD CATWALK SYSTEM AT THE CENTER PIVOT PIER IS NOT SHOWN FOR CLARITY PURPOSES. THE CONTRACTOR SHALL FIELD VERIFY AT THE SITE FOR ANY OVERHEAD OBSTRUCTIONS AND ADJUST THE SHEET PILE DRIVING LINE AS NEEDED.

**GENERAL PLAN VIEW**  
 (SEE SHEET 2 OF 3 FOR A DETAILED PLAN VIEW)

**DESIGN DATA & NOTES:**

DRAWINGS BASED ON INFORMATION COMPILED BY BARR ENGINEERING CO. OF MINNEAPOLIS, MINNESOTA UNDER A CONTRACT TO THE WISCONSIN DEPARTMENT OF NATURAL RESOURCES. WESTBROOK ASSOCIATED ENGINEERS, INC. HAS SUPPLEMENTED OR MODIFIED THE DRAWINGS BASED ON DISCUSSIONS WITH PROJECT STAKEHOLDERS, UTILITY OWNERS, ETC. BARR'S ORIGINAL DRAWINGS ARE INCLUDED WITH THEIR FINAL DESIGN REPORT.

NOTIFY MMSD, DEBRA JENSEN AT (414)225-2143 PRIOR TO COMPLETING CONNECTIONS TO EXISTING MMSD OUTFALLS.

DRAWINGS SHALL NOT BE SCALED.

SUBMITTALS SHALL BE MADE FOR APPROVAL BY THE ENGINEER FOR THE SHEET PILE SECTION, CONCRETE MASONRY SEAL MIX, SURVEY CONTROL MEANS AND METHODS FOR THE CENTER PIVOT PIER MONITORING AND ALL CONNECTION HARDWARE.

EXISTING CONDITIONS SHOWN ON THE DRAWINGS ARE APPROXIMATE. ACTUAL FIELD CONDITIONS MAY VARY. THE CONTRACTOR SHALL VERIFY EXISTING FIELD CONDITIONS PERTINENT TO THE PROPER PERFORMANCE OF THE WORK. DISCREPANCIES BETWEEN THE ACTUAL FIELD CONDITIONS AND THOSE SHOWN ON THE DRAWINGS SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE ENGINEER.

THE DRIVING LINE FOR THE SHEET PILE WALL SHALL BE CLEARED BY THE CONTRACTOR OF ALL DEBRIS, STONE, CONCRETE, SUBMERGED TIMBERS, OR OTHER MATERIAL THAT MAY INTERFERE WITH THE PROPER ALIGNMENT AND PERFORMANCE OF THE WORK.

INSTALLATION MAY REQUIRE THE CONTRACTOR TO PERFORM SOME OF THE WORK UNDERWATER, DEPENDING ON THE RIVER LEVELS AT THE TIME OF INSTALLATION. ANY DE-WATERING / DIVING SHALL BE CONSIDERED INCIDENTAL TO THE PROJECT IF REQUIRED.

THE CONTRACTOR TO FIELD VERIFY THE RELATIONSHIP OF THE NEW SHEET PILE WALL SYSTEM TO EXISTING STRUCTURES AND MAKE ONLY THOSE ADJUSTMENTS APPROVED BY THE ENGINEER.

THE CONTRACTOR SHALL BRACE, SHORE, PROTECT, ETC. ALL NEW WORK AND MATERIALS FROM DAMAGE FROM WAVES, WINDS, STORMS, ETC. AS REQUIRED DURING CONSTRUCTION AND SHALL BE LIABLE FOR ANY DAMAGES RESULTING FROM SUCH.

 THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL TEMPORARY BRACING OR SHORING OF THE PERMANENT STEEL SHEETING TO RESIST THE FLUID PRESSURE OF THE CONCRETE TREMIE POUR DURING PLACEMENT.

CONCRETE TESTING SHALL INCLUDE FIELD TESTS FOR SLUMP, AIR CONTENT AND TEMPERATURE. CAST THREE TEST CYLINDERS PER SET FOR COMPRESSIVE STRENGTH TESTING AT 7, 14 AND 56 DAYS.

ALL BOLTS, LAG BOLTS, WASHERS AND NUTS USED IN CONNECTIONS SHALL BE HOT-DIPPED GALVANIZED.

**STEEL SHEET PILING**

STEEL SHEET PILING TO BE COLD FORMED IN ACCORDANCE WITH ASTM A572, F<sub>y</sub> = 50,000 PSI.

ALL STEEL SHEET PILING SHALL HAVE THE FOLLOWING MINIMUM SECTION PROPERTIES BASED ON SCZ-19:

- WIDTH = 29.95 INCHES
- AMPLITUDE OR DEPTH = 10.13 INCHES
- WEB THICKNESS = 0.354 INCHES
- SECTION MODULUS (ELASTIC) PER LINEAL FOOT = 18.74 IN<sup>3</sup>
- MOMENT OF INERTIA PER LINEAL FOOT = 94.92 IN<sup>4</sup>

A SHEET PILE SECTION OTHER THAN SCZ-19 IS ACCEPTABLE PROVIDED THAT THE SECTION MEETS THE MINIMUM REQUIREMENTS LISTED ABOVE FOR SECTION MODULUS, WEB THICKNESS AND MOMENT OF INERTIA. THE CONTRACTOR WILL BE RESPONSIBLE FOR ALL RESULTING CHANGES IN THE PLANS, STRUCTURAL DESIGN, LABOR AND MATERIALS AS A RESULT OF A SUBSTITUTION INCLUDING THE SUBMITTAL OF A STAMPED DESIGN AND DRAWINGS SEALED BY A STATE OF WISCONSIN - REGISTERED PROFESSIONAL ENGINEER.

**CONSTRUCTION SEQUENCE:**

1. POSITIVELY LOCATE ALL UTILITIES PRIOR TO COMMENCING THE PROPOSED WORK.
2. INSTALL A SURVEY MONITORING SYSTEM THAT INCLUDES ELECTRONIC SURVEY MEASURING EQUIPMENT AND NO LESS THAN 4 OPTICAL SURVEY PRISMS ATTACHED TO THE CONCRETE CENTER PIVOT PIER FOR X-Y-Z MEASUREMENTS. ESTABLISH BASELINE SURVEY DATA AT ALL PRISM LOCATIONS AND TABULATE PRIOR TO THE INSTALLATION OF THE NEW STEEL SHEETING. CONTINUALLY MONITOR THE CENTER PIVOT PIER DURING INITIAL SHEET PILE INSTALLATION FOR SIGNS OF MOVEMENT WHEN COMPARED TO THE BASELINE DATA. ALL SHEET PILE INSTALLATION WORK SHALL BE HALTED AND THE ENGINEER SHALL BE NOTIFIED IMMEDIATELY WHEN ANY DEVIATIONS ARE ENCOUNTERED.
3. INSTALL TURBIDITY BARRIER FOR THE FULL LENGTH OF THE NEW SHEETING TO BE INSTALLED.
  - a) BARRIER SHOULD BE MAINTAINED IN GOOD WORKING ORDER FOR THE DURATION OF ALL SHEET PILE INSTALLATION.
  - b) BARRIER SHALL BE POSITIONED TO ALLOW FALSEWORK PILES TO BE INSTALLED LANDWARD OF THE BARRIER.
  - c) BOTTOM SEDIMENT/DEBRIS ON EQUIPMENT AND/OR OBSTRUCTIONS SHALL BE RINSED ON THE LANDWARD SIDE OF THE TURBIDITY BARRIER.
  - d) BARRIER MAY BE REMOVED ONCE SHEET PILE INSTALLATION, INCLUDING REMOVAL OF ALL FALSEWORK PILES, IS COMPLETE.
4. REMOVE THE HORIZONTAL TIMBERS LOCATED IN THE TIMBER FENDER SYSTEM AND SALVAGE FOR REPLACEMENT AFTER STEEL SHEETING WORK HAS BEEN COMPLETED. NO SAWING OF THE HORIZONTAL TIMBERS WILL BE ALLOWED DURING THE REMOVAL PROCESS.
5. CHECK THE SHEETING LINE FOR POSSIBLE OBSTRUCTIONS USING A VIBRATORY PROBE.
6. REMOVE OBSTRUCTIONS AS NECESSARY USING WIRE ROPE OR CHAIN, PILE EXTRACTOR SLEEVE OR CLAMSHELL. THE SELECTED METHOD SHALL BE THE MOST PRACTICAL FOR REMOVAL OF THE ANTICIPATED OBSTRUCTION, AND THE LEAST DISRUPTIVE TO THE DREDGE LINE. OBSTRUCTIONS SHALL BE DISPOSED AT A REGULATED FACILITY.
7. DRIVE NEW STEEL SHEETING TO THE BOTTOM ELEVATIONS NOTED ON THE DRAWINGS.
8. SECURE NEW STEEL SHEETING TO THE TIMBER FENDER WALL AS NOTED ON THE DRAWINGS.
9. PLACE SAND BAGS WITH PLASTIC SHEETING AS SHOWN ON SHEET 2 OF 3 PRIOR TO PLACEMENT OF THE CONCRETE TREMIE POUR. SAND BAGS AND PLASTIC SHEETING SHALL EXTEND ABOVE THE OBSERVED RIVER LEVEL AND SERVE AS AN IMPERMEABLE BARRIER.
10. TREMIE PLACE CONCRETE MASONRY SEAL MIX AS SHOWN AND NOTED ON THE DRAWINGS.
11. REPLACE AND REATTACH ALL PREVIOUSLY REMOVED HORIZONTAL TIMBERS IN THE TIMBER FENDER SYSTEM.

**NOTES:**

- ① DRIVEN HP12x53 STEEL POSTS. LENGTH SHALL BE SUFFICIENT TO SECURELY SUPPORT BARRIER AT HIGH WATER ELEVATIONS.
- ② SANDBAGS TO BE USED AS ADDITIONAL BALLAST WHEN ORDERED BY THE ENGINEER TO MEET ADVERSE FIELD CONDITIONS.

Dear Jo-Anne Gareau:

Enclosed are the analytical reports for the EMT Lab Order listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me at 847-967-6666.

Sincerely,

## CASE NARRATIVE

**Lab Order:** 09100172

---

Unless otherwise noted, samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

Unless otherwise noted, all method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Sample results relate only to the analytes of interest tested and to the sample received at the laboratory.

All results are reported on a wet weight basis, unless otherwise noted. Dry weight adjusted results are indicated by the notation "dry" in the Units column.

The test results contained in this report meet all of the requirements of NELAC. Accreditation by the State of Illinois or Wisconsin is not an endorsement or a guarantee of the validity of data generated. For specific information regarding EMT's scope of accreditation, please contact your EMT project manager.

The Reporting Limit listed on the Report of Laboratory Analysis is EMT's reporting limit for the analyte reported. For most test methods this reporting limit is primarily based upon the lowest point in the calibration curve.

Analyst's initials of "OUT" indicate that the analyte was analyzed by a subcontracted laboratory.

EPA ID NO: \_\_\_\_\_

OMB#: 2050-0028 Expires 06/30/2009

9. Legal Owner (Continued) Address	Street or P. O. Box: 77 W. Jackson Blvd. (G-17J)	
	City, Town, or Village: Chicago	
	State: IL	
	Country: USA	Zip Code: 60604-3507

10. Type of Regulated Waste Activity

Mark "Yes" or "No" for all activities; complete any additional boxes as instructed. (See instructions on pages 17 to 20.)

A. Hazardous Waste Activities

Complete all parts for 1 through 6.

1. Generator of Hazardous Waste

If "Yes", choose only one of the following - a, b, or c.

- a. LQG: Greater than 1,000 kg/mo (2,200 lbs./mo.) of non-acute hazardous waste; or
- b. SQG: 100 to 1,000 kg/mo (220 - 2,200 lbs./mo.) of non-acute hazardous waste; or
- c. CESQG: Less than 100 kg/mo (220 lbs./mo.) of non-acute hazardous waste

In addition, indicate other generator activities.

- d. United States Importer of Hazardous Waste
- e. Mixed Waste (hazardous and radioactive) Generator

2. Transporter of Hazardous Waste

3. Treater, Storer, or Disposer of Hazardous Waste (at your site) Note: A hazardous waste permit is required for this activity.

4. Recycler of Hazardous Waste (at your site)

5. Exempt Boiler and/or Industrial Furnace If "Yes", mark each that applies.

- a. Small Quantity On-site Burner Exemption
- b. Smelting, Melting, and Refining

6. Underground Injection Control

B. Universal Waste Activities

1. Large Quantity Handler of Universal Waste (accumulate 5,000 kg or more) [refer to your State regulations to determine what is regulated]. Indicate types of universal waste that apply:

Manage

- a. Batteries
- b. Pesticides
- c. Mercury containing equipment
- d. Lamps
- e. Other (specify) \_\_\_\_\_
- f. Other (specify) \_\_\_\_\_
- g. Other (specify) \_\_\_\_\_

2. Destination Facility for Universal Waste

Note: A hazardous waste permit may be required for this activity.

C. Used Oil Activities

Mark all boxes that apply.

1. Used Oil Transporter If "Yes", mark each that applies.

- a. Transporter
- b. Transfer Facility

2. Used Oil Processor and/or Re-refiner If "Yes", mark each that applies.

- a. Processor
- b. Re-refiner

3. Off-Specification Used Oil Burner

4. Used Oil Fuel Marketer If "Yes", mark each that applies.

- a. Marketer Who Directs Shipment of Off-Specification Used Oil to Off-Specification Used Oil Burner
- b. Marketer Who First Claims the Used Oil Meets the Specifications

**11. Description of Hazardous Wastes (See instructions on page 21.)**

**A. Waste Codes for Federally Regulated Hazardous Wastes.** Please list the waste codes of the Federal hazardous wastes handled at your site. List them in the order they are presented in the regulations (e.g., D001, D003, F007, U112). Use an additional page if more spaces are needed.

D018						
D001						

**B. Waste Codes for State-Regulated (i.e., non-Federal) Hazardous Wastes.** Please list the waste codes of the State-regulated hazardous wastes handled at your site. List them in the order they are presented in the regulations. Use an additional page if more spaces are needed for waste codes.

NA						

**12. Comments (See instructions on page 21.)**

Item 7 - Work being done along the Kinnickinnic River.

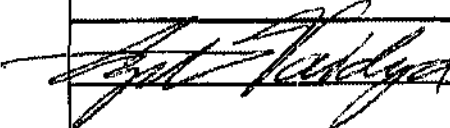

Item 8 - Please provide copies of all documents to the additional site contact: Robert Stryker, CH2M Hill

Address: 135 South 84th Street, Suite 325, Milwaukee, WI 53214

Phone: Office (414.847.0430); Mobile (262.894.4693); Fax (414.454.8703)

Item 9: Office Phone (312.353.5713); Fax (312-886-6869)

**13. Certification.** I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. For the RCRA Hazardous Waste Part A Permit Application, all operator(s) and owner(s) must sign (see 40 CFR 270.10 (b) and 270.11). (See instructions on page 21.)

Hazardous Waste Restricted from Land Disposal Certification

Line item 1,2 (1,2,3 or 4) is subject to the land disposal restrictions of 40CFR Part 268. In accordance with 40CFR 268.7, this generator is providing notice that the waste does not meet the treatment standards specified in Part 268 Subpart D, or does not meet the prohibitions specified in 268.32 or RCRA section 3004 (d).

The shipment contains F001 - F005 spent solvents (Complete Table A, page 2)

The shipment contains other Land Disposal Restricted materials. List all US EPA hazardous waste codes that apply to this waste shipment. (Complete Table B, page 3) (D001 CMBST)

The shipment contains F039 multi-source leachate, or D001 (DEACT), D002 (DEACT) waste prohibited under 40 CFR Section 268.37 or D012 through D043 waste prohibited under the revision to 40 CFR Section 268.48. (Complete Table B, page 3, and/or Table C, page 4)

The shipment contains labpacks (Complete Table D, page 6)

**Waste Management.** Using the following guidelines based on 40CFR 268.7, enter the appropriate letter in the "Management" column located on Table B.

- 1. **RESTRICTED WASTE REQUIRING FURTHER TREATMENT.** This waste must be treated in the applicable treatment standards set forth in 40CFR part 266 subpart D, 268.32, or RCRA Section 3004(d). For "Hazardous Debris", this hazardous debris is subject to the alternative treatment standards of 40CFR 268.45.
- 2. **RESTRICTED WASTE TREATED TO PERFORMANCE STANDARDS.** "I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and that based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the treatment process has been operated and maintained properly so as to comply with the performance levels specified in 40CFR 268 subpart D, and all applicable prohibitions set forth in 40CFR 268.32 or RCRA section 3004(d) without impermissible dilution of the prohibited waste. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."
- 3. **RESTRICTED WASTES FOR WHICH THE TREATMENT STANDARD IS A SPECIFIED TECHNOLOGY AND THE WASTE HAS BEEN TREATED BY THAT TECHNOLOGY.** "I certify under penalty of law that the waste has been treated in accordance with the requirements of 40CFR 268.42. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."
- 4. **GOOD FAITH ANALYTICAL CERTIFICATION FOR INCINERATED ORGANICS.** "I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and that based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the non wastewater organic constituents have been treated by incineration in units operated in accordance with 40CFR Part 264 Subpart O or 40CFR Part 265 Subpart D or by combustion in fuel substitution units in accordance with applicable technical requirements, and I have been unable to detect the non-wastewater organic constituents despite having used good faith efforts to analyze for such constituents. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."
- 5. **RESTRICTED WASTE SUBJECT TO A VARIANCE.** This waste is subject to a national capacity variance, a treatable variance, or a case - by - case extension. Enter the effective date of the prohibition in this column as well. For hazardous debris: "This hazardous debris is subject to the alternative treatment standards of 40CFR Part 265.45."
- 6. **RESTRICTED WASTE WHICH CAN BE LAND DISPOSED WITHOUT FURTHER TREATMENT.** "I have determined that this waste meets all applicable treatment standards set forth in 40 CFR Part 268 Subpart D, and all applicable prohibition levels set forth in Section 268.32, or RCRA Section 3004(d), and therefore can be land disposed without further

treatment." A copy of all applicable treatment standards and specified treatment methods is maintained at the treatment, storage and disposal facility named above. " I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support the certification that the waste complies with the treatment standards specified in 40CFR Part 268 subpart D, and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA Section 3004 (d). I believe that the information I have submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting false certification including the possibility of a fine and imprisonment."

3. WASTE IS NOT CURRENTLY SUBJECT TO PART 268 RESTRICTIONS. This waste is a newly identified waste that is not currently subject to any 40CFR 265 restrictions.

TABLE B

Waste Code	Non-waste water	Treatment Sub-category (if applicable, or NONE)	Technology Standards or Management (A-G based on list shown on pages 1/2)
D01		Ignitable Liquids based on 40 CFR 261.21 except for the 261.21 (a)(1) High TOC Subcategory, managed in Non-CWA/Non CWA equivalent, non Class 1 SDWA Systems	DEACT & meet UTSD, or RORGS, or CMBST
D01		Ignitable characteristic wastes, except for the 261.21 (a)(1) High TOC Subcategory, that are managed in CWA/CWA-equivalent Class 1 SDWA Systems.	DEACT
D01	<i>new</i>	Ignitable liquids based on 40 CFR 261.2 (a)(1) High TOC Ignitable Liquid Subcategory - greater than or equal to 10% TOC	RORGS or CMBST <i>A</i>

TABLE C

D001, D002, or D012 through D043 requires treatment to 268.40 standards, then each underlying hazardous constituent present the waste at the point of generation and at a level above the UTS constituents listed treatment standard must be checked.

D001 or D002 requires treatment of deactivation and meets F039 standards then each underlying hazardous constituent present the waste at the point of generation and at a level above the F039 and UTS constituent listed treatment standard must be checked.

THERE ARE NO UTS CONSTITUENTS PRESENT IN THE WASTE UPON IT'S INITIAL GENERATION CHECK HERE

Check the underlying individual constituents likely to be present from the list below:

Vanadium	4.3	0.23 <sup>1,2</sup>
Zinc	2.81 <sup>1</sup>	NA

These concentrations are expressed in mg/L and are measured through an analysis of TCLP extract; all others are measured through a total waste analysis.

These constituents are only applicable as Underlying Hazardous Constituents. They are not constituents requiring treatment in F039 wastes.

Zinc is not an Underlying Hazardous Constituent requiring treatment in D001, D002, or D012-D043 wastes.

These compounds are regulated by the sum of their concentration instead of as individual constituents.

NOTE: Wastewater units are in mg/L, non-wastewater are in mg/Kg.

TABLE D  
LAB PACK CERTIFICATION  
(268.42, Appendix iv)

APPENDIX IV DRUMS:

This notification and certification applies to the following drums on this shipment. List the Lab Pack drum identification numbers below:

ALL DRUMS THAT MAY NOT BE PACKAGED AS APPENDIX IV TYPE LABPACKS:

The US EPA Hazardous waste codes are **D009, F019, K003, K004, K005, K006, K062, K071, K100, K106, P010, P011, P012, P076, P078, U134, U151**. The alternative treatment standard is incineration (INCIN). This notification applies to those wastes in the following drums on this shipment. List the Lab Pack drum identification numbers below:

CERTIFICATION:

I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support the certification that the waste complies with the treatment standards specified in 40 CFR Part 268 Subpart D, and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA Section 3004(d). I believe that the information I have submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting false certification, including the possibility of a fine and imprisonment.

I hereby certify that all information in this and all associated documents is complete and accurate to the best of my knowledge and information has all the necessary permits and licenses for the waste that has been identified by the profile, if approved for management.

| f. Other (specify) _____        | <input type="checkbox"/> |
| g. Other (specify) _____        | <input type="checkbox"/> |
- Y  N  **2. Destination Facility for Universal Waste**  
 Note: A hazardous waste permit may be required for this activity.

**C. Used Oil Activities; Complete all parts 1-4.**

- Y  N  **1. Used Oil Transporter**  
 If "Yes", mark all that apply.
- a. Transporter
- b. Transfer Facility (at your site)
- Y  N  **2. Used Oil Processor and/or Re-refiner**  
 If "Yes", mark all that apply.
- a. Processor
- b. Re-refiner
- Y  N  **3. Off-Specification Used Oil Burner**
- Y  N  **4. Used Oil Fuel Marketer**  
 If "Yes", mark all that apply.
- a. Marketer Who Directs Shipment of Off-Specification Used Oil to Off-Specification Used Oil Burner
- b. Marketer Who First Claims the Used Oil Meets the Specifications

**D. Eligible Academic Entities with Laboratories—Notification for opting into or withdrawing from managing laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K**

❖ You must check with your State to determine if you are eligible to manage laboratory hazardous wastes pursuant to 40 CFR Part 262 Subpart K

- 1. Opting into or currently operating under 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories  
**See the item-by-item instructions for definitions of types of eligible academic entities. Mark all that apply:**
  - a. College or University
  - b. Teaching Hospital that is owned by or has a formal written affiliation agreement with a college or university
  - c. Non-profit Institute that is owned by or has a formal written affiliation agreement with a college or university
- 2. Withdrawing from 40 CFR Part 262 Subpart K for the management of hazardous wastes in laboratories

**11. Description of Hazardous Waste**

**A. Waste Codes for Federally Regulated Hazardous Wastes.** Please list the waste codes of the Federal hazardous wastes handled at your site. List them in the order they are presented in the regulations (e.g., D001, D003, F007, U112). Use an additional page if more spaces are needed.

D001	D018	F003	F005			

**B. Waste Codes for State-Regulated (i.e., non-Federal) Hazardous Wastes.** Please list the waste codes of the State-Regulated hazardous wastes handled at your site. List them in the order they are presented in the regulations. Use an additional page if more spaces are needed.

NA						

**12. Notification of Hazardous Secondary Material (HSM) Activity**

Y  N  Are you notifying under 40 CFR 260.42 that you will begin managing, are managing, or will stop managing hazardous secondary material under 40 CFR 261.2(a)(2)(ii), 40 CFR 261.4(a)(23), (24), or (25)?

If "Yes", you must fill out the Addendum to the Site Identification Form: Notification for Managing Hazardous Secondary Material.

**13. Comments**

Form is being submitted to specify that US EPA ID # is no longer active. The facility is no longer active.

**14. Certification.** I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations. For the RCRA Hazardous Waste Part A Permit Application, all owner(s) and operator(s) must sign (see 40 CFR 270.10(b) and 270.11).

General Notes

1. A City of Milwaukee permit is required and has been applied for.
2. Restoration and backfill per City permit.
3. Contact North Shore Engineering, Inc. on (262) 241- 9400 for construction staking and layout.
4. Contractor is also to provide erosion control guards (i.e. haybales, silt fence, etc.) necessary to control soil erosion in the area of construction.
5. This project shall adhere to the applicable erosion control measures as stipulated in chapter 290 of the code of ordinances which is in effect as of July 14, 1988.

CITY OF MILWAUKEE  
WATER DEPARTMENT

Maintain a minimum of 6' vertical clearance from the O.D. of water main or the outside edge of any water main appurtenances to the outside edge of the proposed installation.

A minimum of 2'-0" of undisturbed earth between the trench edges of the proposed installation and the existing water main or 3'-0" lateral distance from the C/L of the water main to the C/L of the proposed installation shall be maintained. The 2'-0" undisturbed earth shall have priority.

CERTAIN UNDERGROUND STRUCTURES HAVE BEEN LOCATED ON THE DRAWING. THESE LOCATIONS SHALL NOT BE TAKEN AS CONCLUSIVE. VERIFICATION TO THE SATISFACTION OF THE CONTRACTOR OF ALL UNDERGROUND STRUCTURES, WHETHER SHOWN ON THE DRAWING OR NOT, SHALL BE ASSUMED AS A CONDITION OF THE CONTRACT.

# KK River Dredging Project City of Milwaukee Bridge Cable Installation

RECORD DOCUMENTS

**NOTES:**

Cables were placed in excavated trench. Diver walked the cables to ensure cables placed properly in trench bottom. Centerline location of cables approximate, depth is as shown.  
 Survey data collected by Ryba Marine Construction Co. Hydrographic Survey Team using a single beam sonar system, Odom CVM Echotrack depth sounder and land based Trimble S6 Robotic total station. Survey vessel: Lund 18 Ft. Contours generated using Hypack v9.0.0.22, 0.5 Ft intervals. Cable trench survey's conducted on 09/15/2009 (S. 1st. Street) and 09/22/2009 (S. KK Ave.)  
 This survey represents information for the dates indicated and can only be considered as indicating the general conditions existing at that time.  
 Low Water Datum: All hydrographic survey depths are referred to Low Water Datum elevation 577.5 Ft. above Mean Water Datum, I.G.L.D. 1985  
 Grid Coordinates: Grids shown are based on Wisconsin State Plane Coordinates North American Datum 1983, South Zone 4803 (US Survey Feet)  
 Survey by: James Cooley, Ryba Marine Construction Co.

# TSS and In-situ Turbidity Correlation - 2009 Dredge Monitoring

## Kinnickinnic River Sediment Remediation Project

PREPARED FOR: Kinnickinnic River Team

PREPARED BY: Huck Raddemann/MKE  
Theresa Himmer/BOS

DATE: August 11, 2009

### Introduction

The 2009 dredging activities on the Kinnickinnic River consist of the mechanical dredging of sediments and transportation of the dredged material by barge to the CDF. Continuous turbidity monitoring at stations located 200 feet upstream and 1,000 feet downstream of the dredge area is being performed to demonstrate compliance with the project-specific total suspended solids (TSS) standard of less than 80 mg/L above background. Turbidity measurements in nephelometric turbidity units (NTUs) are recorded as a surrogate for TSS at the monitoring stations.

Prior to the project-specific TSS/turbidity relationship being established, correlations developed by Barr Engineering based on previous TSS/turbidity data from the Milwaukee Metropolitan Sewerage District (MMSD) were used to determine if the 80-mg/L limit above background for TSS was being exceeded (Barr Engineering, 2008). The curve developed using the MMSD data indicated that a turbidity change of 88 NTU above background was equivalent to an 80-mg/L TSS increase. After the commencement of the dredging activities, turbidity monitoring was performed concurrently with TSS sampling in order to establish a project-specific TSS/turbidity correlation curve.

### Field Methods

Surface water monitoring of TSS and turbidity was performed to collect data in order to evaluate the potential for sediment resuspension during dredging activities. A two-person crew in a small vessel (john boat) monitored the extent of the turbidity plume downstream of dredging activities using the same type of turbidity probe (YSI 6136) used at the two monitoring stations. TSS samples were collected from the water depth of greatest turbidity as measured at every 2-foot interval beginning 2-feet above the sediment surface using a peristaltic pump. If turbidity measurements throughout the water column were uniform, the sample was collected at the approximate mid-point of the water column. Sampling was performed starting at the dredge and continued at 50-foot intervals downstream within the center of the visible suspended solid (turbidity) plume until reaching the point where turbidity levels returned to the daily average background level as determined by the upstream monitoring station near the Becher Street Bridge. Surface water TSS sample/turbidity monitoring locations were surveyed and recorded using a sub-meter global positioning system (GPS). TSS samples were submitted USEPA Central Regional Laboratory (CRL) for analyses by method 2540D.

## Results and Discussion

The TSS and turbidity data collected during the 2009 Kinnickinnic River dredging are presented in Table 1. In order to establish the correlation curve, TSS was plotted against the average turbidity reading for each station (Figure 1). When plotting the recent Kinnickinnic River data, the highest values for each of the two replicate samples was retained for graphing. A linear fit trendline was added to the plot along with the trendline equation and  $R^2$  value. The project-specific data exhibit an  $R^2$  value is 0.99, indicative of a very good correlation between measured turbidity and TSS.

The summary data for the initial curve established by Barr Engineering using the MMSD data and the correlation curve established using project specific data are presented in Table 2. The project-specific correlation currently estimates that a turbidity change of 85 NTU above background is equivalent to a TSS increase of approximately 80-mg/L; exhibiting very close agreement with the 88 NTU change predicted by the previously existing correlation curve.

The predicted TSS values across a range of turbidity values were calculated using the two curves and compared (Table 3). There is a lack of agreement between the two curves for relatively low turbidity values (below 60 NTU); this is likely due in part, to the lack of recent data in this range and the negative y-intercept in the equations for the curve determined using the project-specific data. Above 60 NTU the percent difference between the TSS values predicted using the initial correlation curve and the new correlation curve ranges from 1 to ~17%, with the closest agreement in the turbidity range of 80 to 180 NTU (RPD is less than 10%).

## Summary and Conclusions

The project specific correlation curve developed using the recently collected TSS and turbidity data is an adequate means of predicting TSS in real time during dredging operations. This correlation exhibits very close agreement with the previously established correlation curve that was used during the initial monitoring operations. The newer, project specific TSS-turbidity correlation is slightly more conservative than the previous correlation curve established using the MMSD data, resulting in TSS estimates that are more protective of the environment (Figure 1).

## EXECUTIVE SUMMARY

The United States Environmental Protection Agency (U.S. EPA) Great Lakes National Program Office (GLNPO) contracted CH2M Hill as the primary contractor to dredge a small area on the Kinnickinnic River, Milwaukee, Wisconsin (Project Area). CH2M Hill sub-contracted Ryba Marine Construction (Ryba) to provide the dredging services. Ryba sub-contracted Veolia Environmental (Veolia) to provide pre- and post-dredging bathymetry services.

GLNPO tasked Weston Solutions Inc., (WESTON) under the Superfund Technical Assessment and Response Team (START) contract to provide third-party oversight of the pre- and post-dredging bathymetric survey. WESTON sub-contracted Affiliated Researchers to assist with the field oversight and provide a Hydrographer to directly observe and document the field process of the pre- and post-dredging bathymetric survey, as well as review the compiled data and the bathymetric survey. Neither WESTON nor Affiliated Researchers collected any data as part of its oversight of the post-dredge survey. This report documents the oversight of the methods and findings of the post-dredging bathymetric survey of RMU1 of the Kinnickinnic River in Milwaukee, Wisconsin.

The scope of work for the project requested a written “survey plan” to describe the equipment, methods, and procedures proposed for the pre- and post-dredging bathymetric surveys of the Project Area. A pre-dredging survey plan was provided by Ryba prior to the pre-dredging bathymetric survey, and subsequently modified. Prior to the commencement of the bathymetric surveying of RMU1, a revised version of the pre-dredge survey plan<sup>1</sup> was provided by Ryba and reviewed by WESTON and Affiliated Researchers. Affiliated Researchers noted that the RMU1 survey plan contained an inconsistency by stating that bathymetric survey procedures would “aim for 100% coverage”.

Onsite preparations for the post-dredging survey for RMU1 were scheduled to begin and were completed on September 11, 2009. The data collection process was completed with minimal software problems, which were readily corrected in the field. A few minor data points were discussed for collection but the additional data was never collected.

Data compiling of the post-dredge survey began on September 14, 2009 and was completed on September 22, 2009. Survey data was edited, compiled, and developed by Veolia into bathymetric survey drawings of river bottom elevations, utilizing *HYPACK* software. Affiliated Researchers utilized *HYPACK* software to review and compare the data and bathymetric survey. A significant error in the river bank elevations depicted on the bathymetric survey was discovered and determined to have been caused from erroneous compiling of the data by Veolia. This error was corrected through emails and conversations between Affiliated Researchers and Veolia.

On September 22, 2009, a final bathymetric survey drawing was provided by Veolia for review. Affiliated Researchers verified Veolia’s bathymetric survey drawing to be consistent with the

---

<sup>1</sup> Survey Plan – Rev C dated June 5, 2009

data collected. The final drawing provided by Veolia however, was represented in one foot bathymetric increments although the project scope of work called for bathymetric survey to be represented in ½ foot bathymetric increments.

With the exceptions as noted, Affiliated Researchers' oversight of the methods and findings of the post-dredging surveying of RMU1 has determined that recognized and acceptable equipment and methods were used.

## INTRODUCTION

The United States Environmental Protection Agency (U.S. EPA) Great Lakes National Program Office (GLNPO) contracted WESTON Solutions Inc., (WESTON), to perform third-party oversight of the post-dredging bathymetric survey for the Kinnickinnic River (KK River) in Milwaukee, Wisconsin. WESTON sub-contracted Affiliated Researchers to provide the field oversight and oversee the data compilation and bathymetric survey map comparison. Affiliated Researchers' Hydrographer provided field oversight of the post-dredging survey. GLNPO's primary contractor for the dredging project was CH2M Hill out of Milwaukee, Wisconsin. CH2M Hill sub-contracted Ryba Marine Construction (Ryba) to provide the dredging services. Ryba sub-contracted Veolia Environmental (Veolia) to provide pre- and post-dredging bathymetry services.

The small area on the KK River to be dredged (Project Area) is approximately 0.38 river miles, located approximately 1.6 to 2.0 river miles upstream of the river mouth (Figure 1.) The Project Area had been subdivided into four staged work areas referred to as "remediation area units" (RMU). RMU1, which was located within the southwestern portion of the Project Area, was the first area where dredging had been completed, and was the first area for the post-dredging survey.

This report documents the oversight of the methods and findings of the post-dredging bathymetric survey of RMU1 of the Kinnickinnic River in Milwaukee, Wisconsin. This report provides a summary of the:

- Survey Plan;
- On-Site Survey Preparations;
- Data Collection;
- Data Compiling; and,
- Conclusions.

## SURVEY PLAN

The scope of work for the project requested a written “survey plan” to describe the equipment, methods, and procedures proposed for the pre- and post-dredging bathymetric surveys of the Project Area. A pre-dredging survey plan was provided by Ryba prior to the pre-dredging bathymetric survey, and subsequently modified. Prior to the commencement of the bathymetric surveying of RMU1, a revised version of the pre-dredge survey plan<sup>2</sup> was provided by Ryba and reviewed by WESTON and Affiliated Researchers.

Affiliated Researchers noted that the RMU1 survey plan contained an inconsistency by stating that bathymetric survey procedures would “aim for 100% coverage”. This statement in the plan apparently remained from the original pre-dredging survey plan in which multi-beam procedures had been proposed. Subsequent to the original plan, the procedures had been modified to use single beam methods along transects which did not enable 100% coverage of the Project Area.

**Figure 1. Kinnickinnic River Project  
Milwaukee, Milwaukee County, Wisconsin**

<sup>2</sup> Survey Plan – Rev C dated June 5, 2009

## ONSITE SURVEY PREPARATIONS

The post-dredging survey of RMU1 and the onsite preparations for the post-dredging survey was initiated and completed on September 11, 2009.

A manual “tidal gauge” was established on the river to record water elevations at the Project Area. Benchmarks had been previously established during the pre-dredging survey, along the river at strategic locations.

Proposed transects for which the single-beam survey was to be conducted, were developed at 50 foot intervals, using *AutoCAD* software. A “Planned Lines” file was created with *HYPACK* software, to correspond with the survey transect that were developed using *AutoCAD*. The “Planned Lines” file was copied to the *HYPACK* survey program on the onboard computer, to provide navigation of the survey transects.

As required by the US Army Corps of Engineers hydrography manual<sup>3</sup>, a latency test of the equipment and a sound velocity measurement was preformed.

### STAFF INVOLVED:

- Mr. James Cooley, Ryba
- Mr. Bill Schuette, Veolia
- Mr. Chris Bauer, Veolia
- Mr. Jake Spees, Veolia
- Mr. Trent Nedens, Veolia
- Ms. Tonya Balla, WESTON
- Mr. Mike Caldwell, Affiliated Researchers

### EQUIPMENT USED:

- Survey vessel: “Miss Geodesy”, 22 foot aluminum survey boat with cabin for 3.
- RTK-GPS: *Trimble R8 GNSS Model 3*
- Single-beam echo sounder: *Odom Dual Frequency Echotrac II*
- Velocity profiler: *Applied Micro Systems Smart SV*
- Computer drafting and design software: *AutoCADD*
- Hydrographic software: *HYPACK*

### ERRORS, CONCERNS, DISCREPANCIES, AND SOLUTIONS:

During the post-survey preparations on September 11, 2009, the *HYPACK* software displayed errors during setup. Veolia checked all of the connections, installed a different software driver,

---

<sup>3</sup>US Army Corps of Engineers, EM 110-2-1003 Hydrographic Surveying manual.

restarted the computer, and restarted the *HYPACK* software. This procedure seemed to correct the noted *HYPACK* errors.

However, a 1 foot elevation error still remained in *HYPACK*. This same error was encountered during the pre-dredge survey and the source of the problem was never discovered. To resolve the 1 foot elevation error, Veolia contacted *HYPACK* Technical Support. *HYPACK* suggested that since this was a constant error rather than a variable error, Veolia could incorporate an “orthographic height correction” into the *HYPACK* program. Veolia accepted this course of action in order to maintain continuity between pre- and post-dredging surveys.

## DATA COLLECTION

Data collection for the post-dredging survey was initiated and completed on September 11, 2009, with the exception of a few minor additional data that were discussed as needed but never collected. The data collection process involved minor problems associated with the software, but overall was without incident. Tidal data was manually recorded approximately every one-half hour to record water elevations in the Project Area.

### STAFF INVOLVED:

- Mr. James Cooley, Ryba
- Mr. Bill Schuette, Veolia
- Mr. Chris Bauer, Veolia
- Mr. Jake Spees, Veolia
- Mr. Bob Kilburn, Seiler Instrument
- Mr. Trent Nedens, Veolia
- Mr. Mike Caldwell, Affiliated Researchers

### EQUIPMENT

- Survey vessel: “Miss Geodesy”, 22 foot aluminum survey boat with cabin for 3.
- RTK-GPS: *Trimble R8 GNSS Model 3*
- Single-beam echo sounder: *Odom Dual Frequency Echotrac II*
- Velocity profiler: *Applied Micro Systems Smart SV*
- Hydrographic software: *HYPACK*

### ERRORS, CONCERNS, DISCREPANCIES, AND SOLUTIONS

The data collection process involved only a few minor problems associated with the software, but was without incident or impact.

## DATA COMPILING

Compiling the data from the post-dredging survey for RMU1 was initiated on September 14, 2009 and was completed on September 22, 2009. Survey data was edited, compiled, and developed by Veolia into bathymetric survey drawings of river bottom elevations, utilizing *HYPACK* software.

During the data compiling process, Mr. Mike Caldwell of Affiliated Researchers and Mr. Chris Bauer of Veolia developed independent bathymetric drawings from the post-dredge survey data. Affiliated Researchers and Veolia utilized *HYPACK* software to review the data and develop the bathymetric survey.

### STAFF INVOLVED:

- Mr. Chris Bauer, Veolia
- Mr. James Cooley, Ryba
- Ms. Diana Mally, GLNPO
- Ms. Tonya Balla, WESTON
- Mr. Mike Caldwell, Affiliated Researchers
- Mr. Rollin Reineck, Affiliated Researchers
- Mr. Bob Kilburn, Seiler Instrument

### EQUIPMENT:

- Hydrographic software: *HYPACK*
- Computer drafting and design software: *AutoCAD*

### ERRORS, CONCERNS, DISCREPANCIES, AND SOLUTIONS:

#### September 17, 2009

- Affiliated Researchers received a phone call from Mr. Chris Bauer of Veolia regarding the need for some additional data points to be collected by Ryba, in order to complete the bathymetric survey drawing. Veolia also inquired from Affiliated Researchers whether they had knowledge of whether a “channel design” had been created/provided. Affiliated Researchers had not received a channel design.

#### September 18, 2009

- A conference call was scheduled and conducted with U.S EPA, CH2M Hill, Ryba, and Veolia, WESTON, and Affiliated Researchers to discuss the additional data points, status of the channel design, timing on the deliverables, and a few other minor issues. All issues were resolved.

#### September 21, 2009

- Affiliated Researchers received from Veolia via email a data package containing what Veolia had intended to be all of the post-dredging data used for the development of the final bathymetric drawing as well as the final bathymetric drawing. However, the materials shared inadvertently contained the data and drawing relating to the pre-dredge survey. Veolia provided the correct data and drawing package.
- Affiliated Researchers found, from comparing its independently developed post-dredge surveys with the survey developed by Veolia, that Veolia had erroneously interpolated a portion of the data. Veolia had interpolated from the last data point elevation along each transect, to the top of the sheet-piling wall along the bank of the river. This erroneous interpolation created bathymetric contours that were approximately 4 to 5 feet above the water's surface elevation along the bank of the river. Veolia suggested excluding bank data that was derived from the sheet-piling wall and instead to end the bathymetric contours at the last sounding on each transect. Affiliated Researchers suggested Veolia utilize the same method that it had employed in the pre-dredging survey, which was to interpolate the last sounding elevation on each transect with the horizontal coordinates only from the adjacent sheet-piling wall. Veolia implemented this course of action in order to maintain continuity between pre- and post-dredging surveys.

**September 22, 2009**

- Affiliated Researchers finalized its independently developed post-dredge survey and compared it with the survey developed by Veolia. No significant errors were noted – only a few minor computer generated anomalies. The acceptable comparison survey was relayed by WESTON to GLNPO.

**September 23, 2009**

- WESTON submitted the comparison figure to GLNPO, containing a depiction of the comparison of the two independently create post-dredge bathymetric survey drawings (see attached).
- The final drawing provided by Veolia was represented in one foot bathymetric increments although the project scope called for the bathymetric survey to be represented in ½ foot bathymetric increments.

## **CONCLUSION**

With the exceptions as noted, Affiliated Researchers' oversight of the methods and findings of the post-dredging surveying of RMU1 has determined that recognized and acceptable equipment and methods were used, which has resulting in an acceptable bathymetric survey of this area.

## EXECUTIVE SUMMARY

The United States Environmental Protection Agency (U.S. EPA) Great Lakes National Program Office (GLNPO) contracted CH2M Hill as the primary contractor to dredge a small area on the Kinnickinnic River, Milwaukee, Wisconsin (Project Area). CH2M Hill sub-contracted Ryba Marine Construction (Ryba) to provide the dredging services. Ryba sub-contracted Veolia Environmental (Veolia) to provide pre- and post-dredging bathymetry services.

GLNPO tasked Weston Solutions Inc., (WESTON) under the Superfund Technical Assessment and Response Team (START) contract to provide third-party oversight of the pre- and post-dredging bathymetric survey. WESTON sub-contracted Affiliated Researchers to assist with the field oversight and provide a Hydrographer to directly observe and document the field process of the pre- and post-dredging bathymetric survey, as well as review the compiled data and the bathymetric survey. Neither WESTON nor Affiliated Researchers collected any data as part of its oversight of the post-dredge survey. This report documents the oversight of the methods and findings of the post-dredging bathymetric survey of RMU's 2, 3, & 4 of the Kinnickinnic River in Milwaukee, Wisconsin.

The scope of work for the project requested a written "survey plan" to describe the equipment, methods, and procedures proposed for the pre- and post-dredging bathymetric surveys of the Project Area. A pre-dredging survey plan was provided by Ryba prior to the pre-dredging bathymetric survey, and subsequently modified. Prior to the commencement of the bathymetric surveying of RMU1, a revised version of the pre-dredge survey plan<sup>1</sup> was provided by Ryba and reviewed by WESTON and Affiliated Researchers. Affiliated Researchers noted that the RMU1 survey plan contained an inconsistency by stating that bathymetric survey procedures would "aim for 100% coverage". A revised survey plan was not provided prior to the post-dredging bathymetric surveying of RMU's 2, 3, & 4.

Onsite preparations for the post-dredging survey for RMU2, 3, & 4 were initiated and completed on October 2, 2009. The data collection process was completed without incident.

Data compiling of the post-dredge survey began on October 5, 2009 and was completed on October 8, 2009. Survey data was edited, compiled, and developed by Veolia into bathymetric survey drawings of river bottom elevations, utilizing *HYPACK* software. Affiliated Researchers utilized *HYPACK* software to review and compare the data and bathymetric survey. Several insignificant errors were found in the river elevations depicted on the bathymetric survey and corrected. These errors were corrected through a telephone conversation between Affiliated Researchers and Veolia.

On October 8, 2009, a final bathymetric survey drawing was provided by Veolia for review. Affiliated Researchers verified Veolia's bathymetric survey drawing to be consistent with the data collected. The final drawing provided by Veolia was represented in one foot bathymetric

increments, although the project scope of work called for the bathymetric survey to be represented in ½ foot bathymetric increments.

With the exceptions as noted, Affiliated Researchers' oversight of the methods and findings of the post-dredging surveying of RMU's 2, 3, & 4 has determined that recognized and acceptable equipment and methods were used.

## INTRODUCTION

The United States Environmental Protection Agency (U.S. EPA) Great Lakes National Program Office (GLNPO) contracted WESTON Solutions Inc., (WESTON), to perform third-party oversight of the post-dredging bathymetric survey for the Kinnickinnic River (KK River) in Milwaukee, Wisconsin. WESTON sub-contracted Affiliated Researchers to provide the field oversight and oversee the data compilation and bathymetric survey map comparison. Affiliated Researchers' Hydrographer provided field oversight of the post-dredging survey. GLNPO's primary contractor for the dredging project was CH2M Hill out of Milwaukee, Wisconsin. CH2M Hill sub-contracted Ryba Marine Construction (Ryba) to provide the dredging services. Ryba sub-contracted Veolia Environmental (Veolia) to provide pre- and post-dredging bathymetry services.

The small area on the KK River to be dredged (Project Area) is approximately 0.38 river miles, located approximately 1.6 to 2.0 river miles upstream of the river mouth (Figure 1.) The Project Area had been subdivided into four staged work areas referred to as "remediation area units" (RMU). RMU's 2, 3, & 4 comprised all but the southwestern portion (RMU1) of the Project Area, and accounted for the final area of dredging and post-dredging survey.

This report documents the oversight of the methods and findings of the post-dredging bathymetric survey of RMU's 2, 3, & 4 of the Kinnickinnic River in Milwaukee, Wisconsin. This report provides a summary of the:

- Survey Plan;
- On-Site Survey Preparations;
- Data Collection;
- Data Compiling; and,
- Conclusions.

## SURVEY PLAN

The scope of work for the project requested a written “survey plan” to describe the equipment, methods, and procedures proposed for the pre- and post-dredging bathymetric surveys of the Project Area. A pre-dredging survey plan was provided by Ryba prior to the pre-dredging bathymetric survey, and subsequently modified. Prior to the commencement of the bathymetric surveying of RMU1, a revised version of the pre-dredge survey plan<sup>2</sup> was provided by Ryba and reviewed by WESTON and Affiliated Researchers. Affiliated Researchers noted that the RMU1 survey plan contained an inconsistency by stating that bathymetric survey procedures would “aim for 100% coverage”. This statement in the plan apparently remained from the original pre-dredging survey plan in which multi-beam procedures had been proposed. Subsequent to the original plan, the procedures had been modified to use single beam methods along transects which did not enable 100% coverage of the Project Area.

A revised survey plan was not provided prior to the post-dredging bathymetric surveying of RMU’s 2, 3, & 4.

**Figure 1. Kinnickinnic River Project  
Milwaukee, Milwaukee County, Wisconsin**

<sup>2</sup> Survey Plan – Rev C dated June 5, 2009

## ONSITE SURVEY PREPARATIONS

The post-dredging survey of RMU's 2, 3, & 4 and the onsite preparations for the post-dredging survey was initiated and completed on October 2, 2009.

A manual "tidal gauge" was established on the river to record water elevations at the Project Area. Benchmarks had been previously established during the pre-dredging survey, along the river at strategic locations.

Proposed transects for which the single-beam survey was to be conducted, were developed at 50 foot intervals, using *AutoCAD* software. A "Planned Lines" file was created with *HYPACK* software, to correspond with the survey transect that were developed using *AutoCAD*. The "Planned Lines" file was copied to the *HYPACK* survey program on the onboard computer, to provide navigation of the survey transects.

As required by the US Army Corps of Engineers hydrography manual<sup>3</sup>, a latency test of the equipment and a sound velocity measurement was preformed.

### STAFF INVOLVED:

- Mr. James Cooley, Ryba
- Mr. Bill Schuette, Veolia
- Mr. Chris Bauer, Veolia
- Mr. Bob Kilburn, Seiler Instrument
- Mr. Mike Caldwell, Affiliated Researchers

### EQUIPMENT USED:

- Survey vessel: "Miss Geodesy", 22 foot aluminum survey boat with cabin for 3.
- RTK-GPS: *Trimble R8 GNSS Model 3*
- Single-beam echo sounder: *Odom Dual Frequency Echotrac II*
- Velocity profiler: *Applied Micro Systems Smart SV*
- Computer drafting and design software: *AutoCADD*
- Hydrographic software: *HYPACK*

### ERRORS, CONCERNS, DISCREPANCIES, AND SOLUTIONS:

No problems were encountered during the onsite survey preparations.

---

<sup>3</sup>US Army Corps of Engineers, EM 110-2-1003 Hydrographic Surveying manual.

## DATA COLLECTION

Data collection for the post-dredging survey was initiated and completed on October 2, 2009. The data collection process proceeded without and tidal data was manually recorded approximately every one-half hour to record water elevations in the Project Area.

### STAFF INVOLVED:

- Mr. James Cooley, Ryba
- Mr. Bill Schuette, Veolia
- Mr. Chris Bauer, Veolia
- Mr. Bob Kilburn, Seiler Instrument
- Mr. Mike Caldwell, Affiliated Researchers

### EQUIPMENT

- Survey vessel: “Miss Geodesy”, 22 foot aluminum survey boat with cabin for 3.
- RTK-GPS: *Trimble R8 GNSS Model 3*
- Single-beam echo sounder: *Odom Dual Frequency Echotrac II*
- Velocity profiler: *Applied Micro Systems Smart SV*
- Hydrographic software: *HYPACK*

### ERRORS, CONCERNS, DISCREPANCIES, AND SOLUTIONS

No problems were encountered during the data collection.

## DATA COMPILING

Compiling the data from the post-dredging survey for RMU 2, 3, & 4 was initiated on October 5, 2009 and was completed on October 8, 2009. Survey data was edited, compiled, and developed by Veolia into bathymetric survey drawings of river bottom elevations, utilizing *HYPACK* software.

During the data compiling process, Mr. Mike Caldwell of Affiliated Researchers and Mr. Chris Bauer of Veolia developed independent bathymetric drawings from the post-dredge survey data. Affiliated Researchers and Veolia utilized *HYPACK* software to review the data and develop the bathymetric survey.

### STAFF INVOLVED:

- Mr. Chris Bauer, Veolia
- Ms. Tonya Balla, WESTON
- Mr. Mike Caldwell, Affiliated Researchers
- Mr. Rollin Reineck, Affiliated Researchers

### EQUIPMENT:

- Hydrographic software: *HYPACK*
- Computer drafting and design software: *AutoCAD*

### ERRORS, CONCERNS, DISCREPANCIES, AND SOLUTIONS:

#### October 8, 2009

- Affiliated Researchers called Mr. Bauer of Veolia with respect to a few minor discrepancies between the two independently developed bathymetric survey drawings. Mr. Bauer corrected a minor error seen in the bathymetric contours, and also modified his border file (which was used to represent the river bank) to eliminate the contour lines that had been previously shown within an abandoned train bridge abutment.

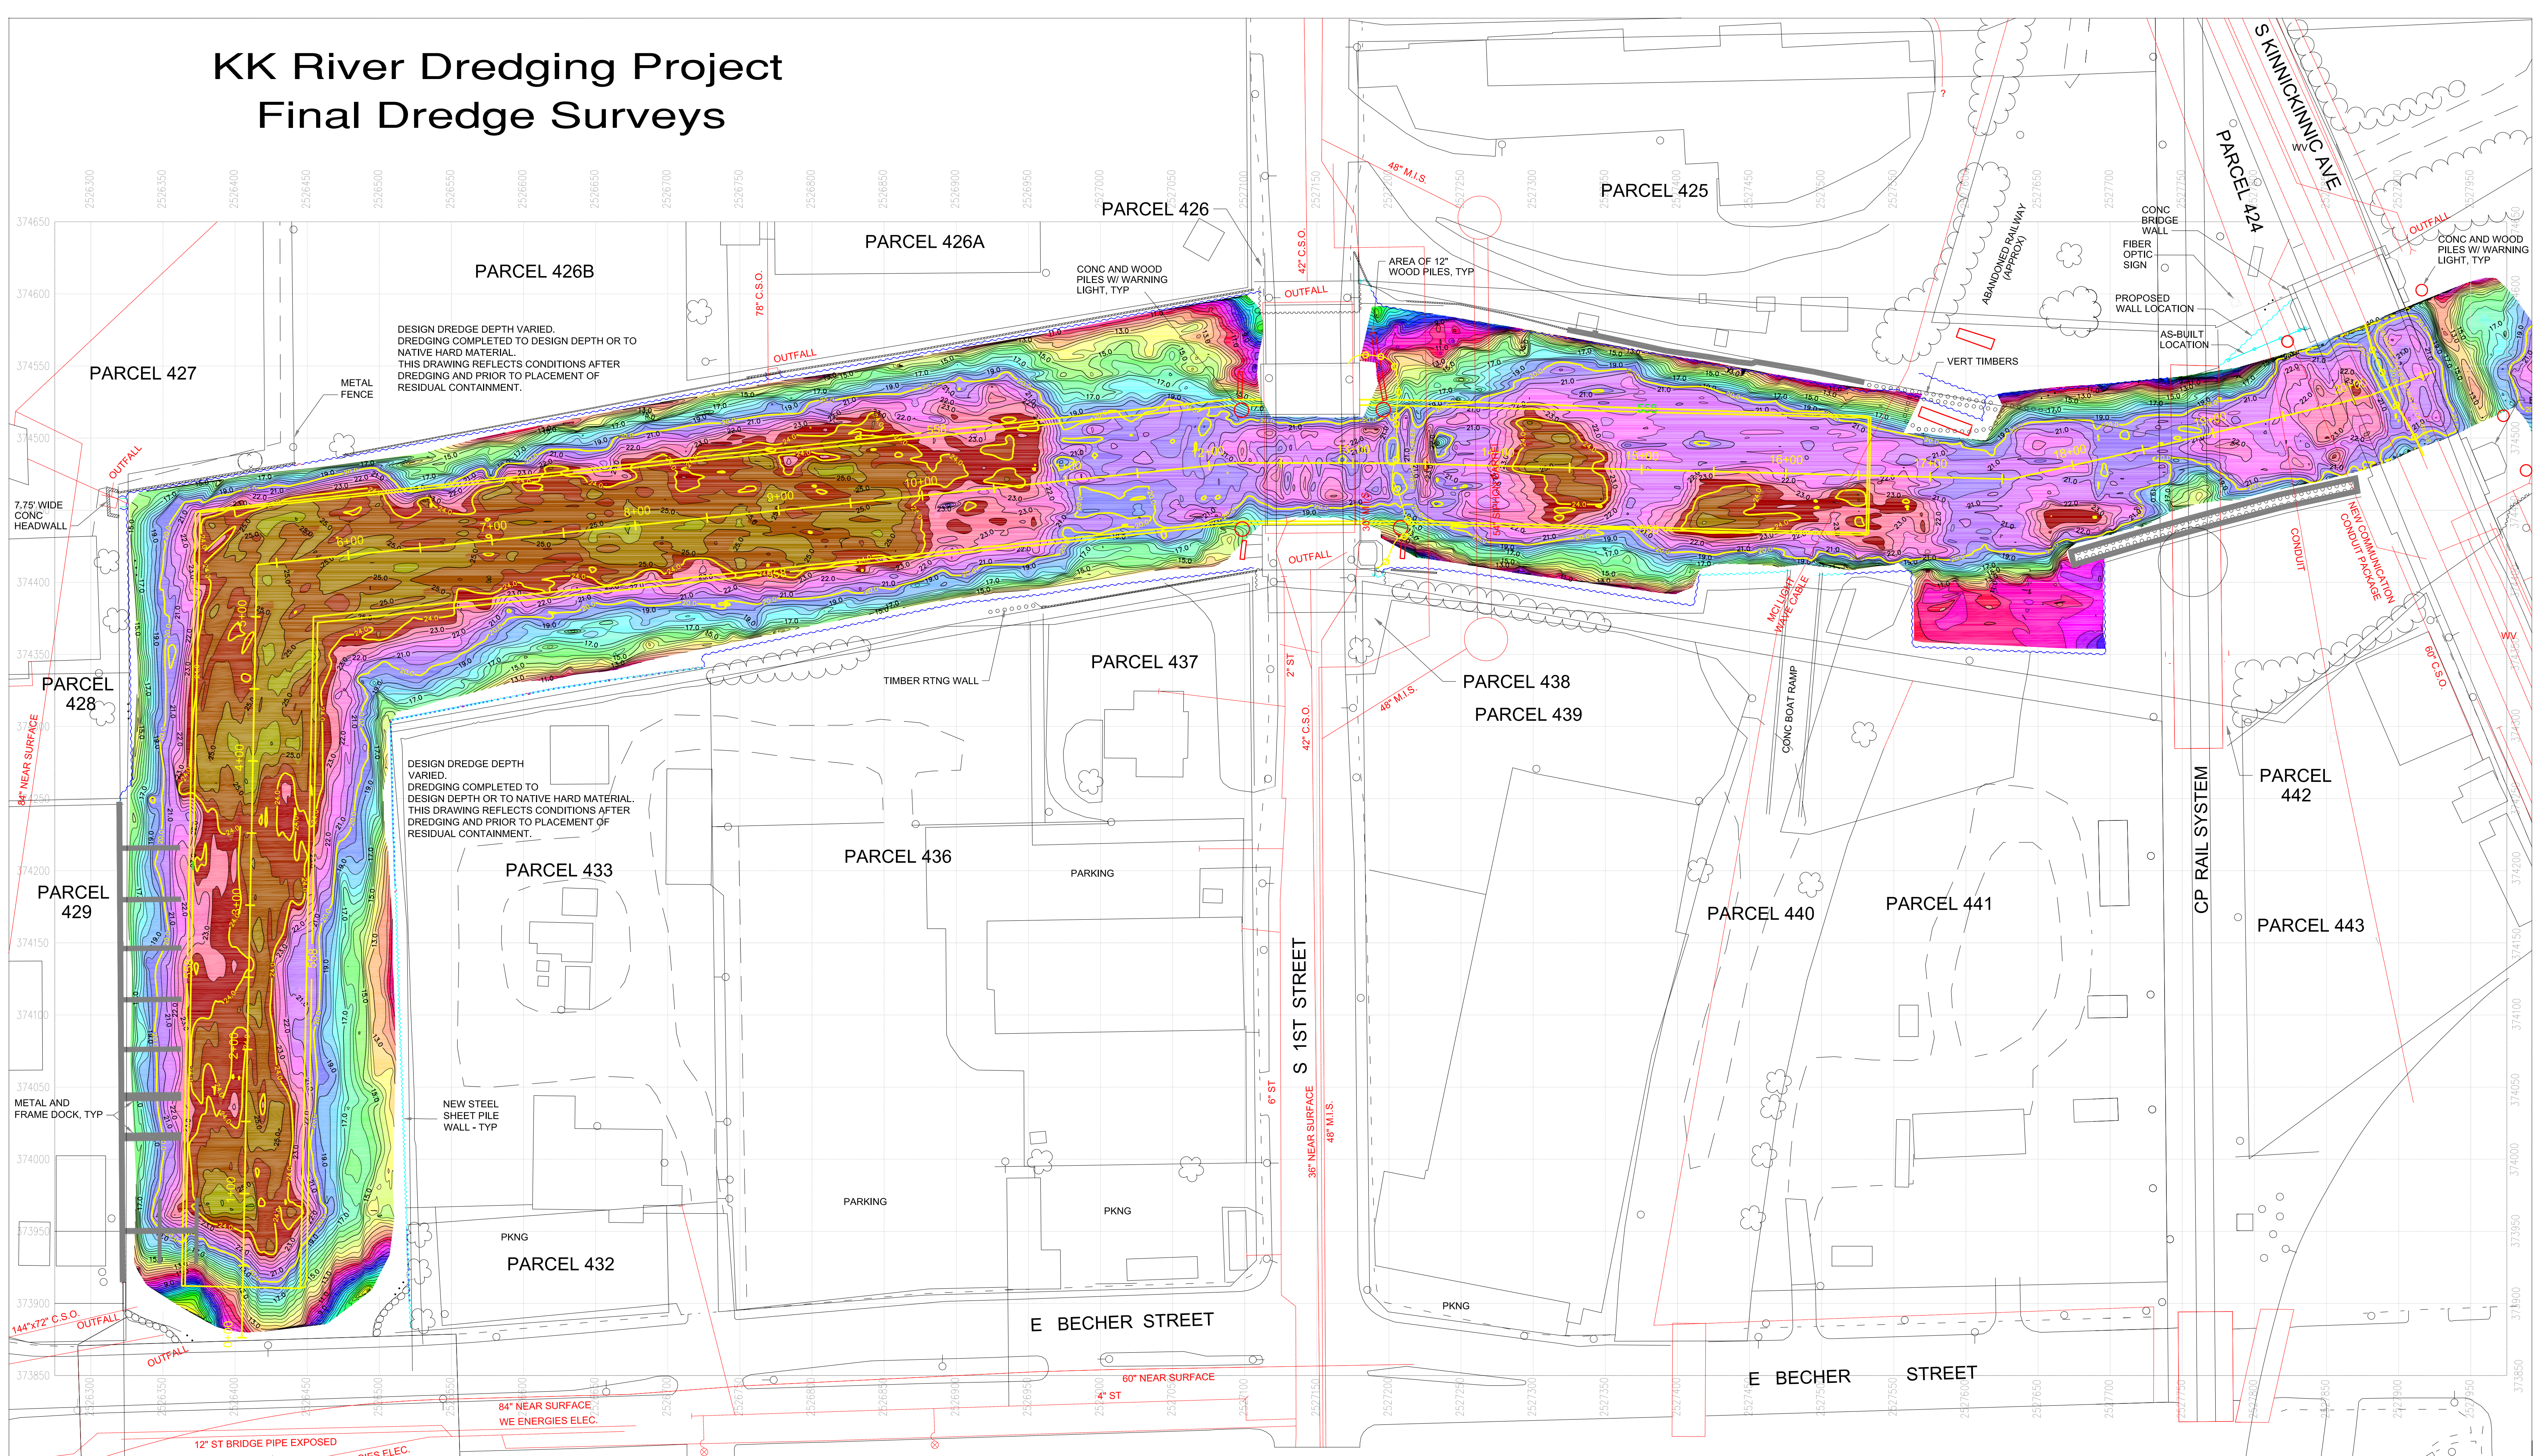

## **CONCLUSION**

With the exceptions as noted, Affiliated Researchers' oversight of the methods and findings of the post-dredging surveying of RMU's 2, 3, & 4 has determined that recognized and acceptable equipment and methods were used, which has resulting in an acceptable bathymetric survey of this area.

DESIGN DREDGE DEPTH VARIED. DREDGING COMPLETED TO DESIGN DEPTH OR TO NATIVE HARD MATERIAL. THIS DRAWING REFLECTS CONDITIONS AFTER DREDGING AND PRIOR TO PLACEMENT OF RESIDUAL CONTAINMENT.

**NOTES:**  
 Hydrographic survey data collected by both Ryba Marine Construction Co. and Veolia ES Special Services (VES-SS). Above contours generated primarily with use of VES-SS survey data combined with incidental areas by Ryba Marine. Contours generated using Hypack v9.0.0.22, 0.5 Ft intervals.  
 Ryba Marine used a single beam sonar system, Odom CVM Echowalk depth sounder and land based Trimble 56 Robotic total station. Survey vessel: Lund 18 Ft.  
 VES-SS survey data was collected using a single-beam sonar system and a GNSS RTK unit. All surveying utilized a Trimble GNSS RTK unit for horizontal and vertical position. The single-beam system used an Odom Echo-Trac II for soundings in water 3' or greater in depth. Fluctuations in water datum were accounted for by the RTK unit in real-time, and all data used was collected in "Fix" mode. Survey procedure limited the vessel to 2 knots or less for the majority of the single-beam surveying, with an emphasis on controlling any pitch or roll error. Data was collected along survey tracklines running perpendicular to the flow of the river at 25 foot intervals. All data collected at 50' intervals was witnessed by Affiliated Researchers working for Weston. Data collected under bridges was collected using conventional survey methods due to the lack of satellite availability. Data collected under the "Maple" and incidental areas was collected by Ryba Marine. The speed of sound in water was obtained using a SmartSV sound velocity unit at 2' intervals through the range of project water depth. An average for this velocity profile was calculated and applied to the data in real-time.  
 Survey dates varied, surveys conducted as work areas completed and prior to sand capping. This survey represents information for the survey's conducted in the fall of 2009 after final dredge cut and prior to sand capping and can only be considered as indicating the general conditions existing at that time. Factors such as storm events, river currents, prop wash, etc. may impact conditions since survey.  
 Low Water Datum: All hydrographic survey depths are referred to Low Water Datum elevation 577.5 Ft. above Mean Water Datum, I.G.L.D. 1985  
 Grid Coordinates: Grids shown are based on Wisconsin State Plane Coordinates North American Datum 1983, South Zone 4803 (US Survey Feet)  
 New sheet pile wall survey provided by Edward E. Gillen Company. City streets, properties, utilities, building survey developed by Barr Engineering. Barr Engineering drawing provided by CH2M HILL.

# KK RIVER DREDGING PROJECT - CDF SURVEY

## PRE-DREDGE CDF, POST DREDGE CDF PERIMETER POST-DREDGE HYDROGRAPHIC OFFLOADING AREA

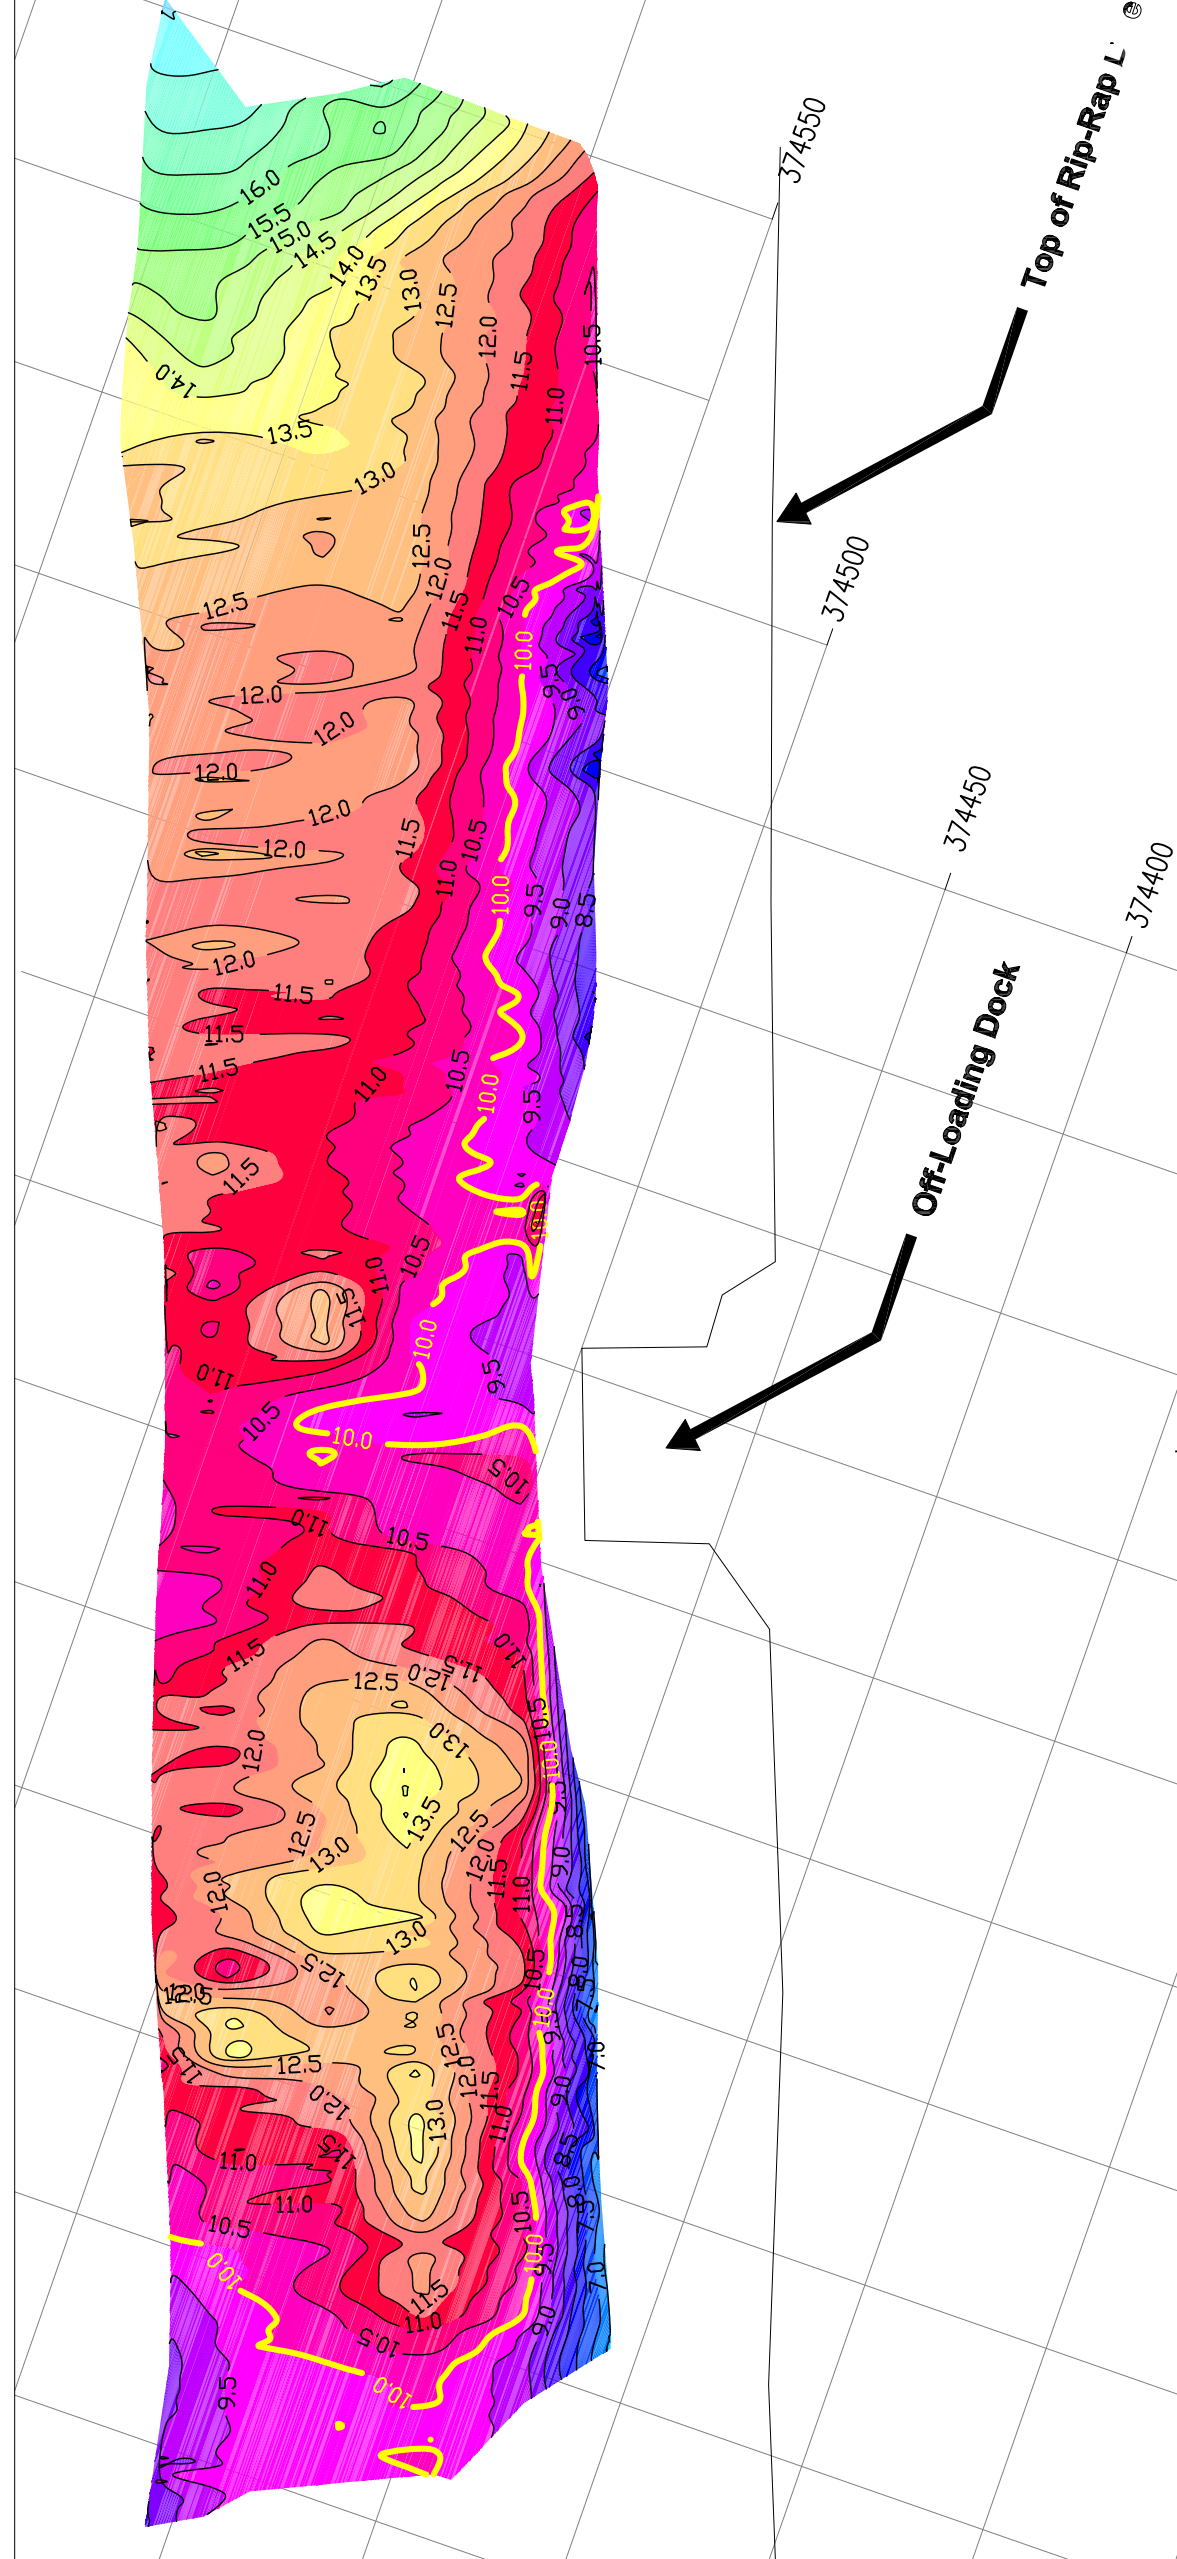

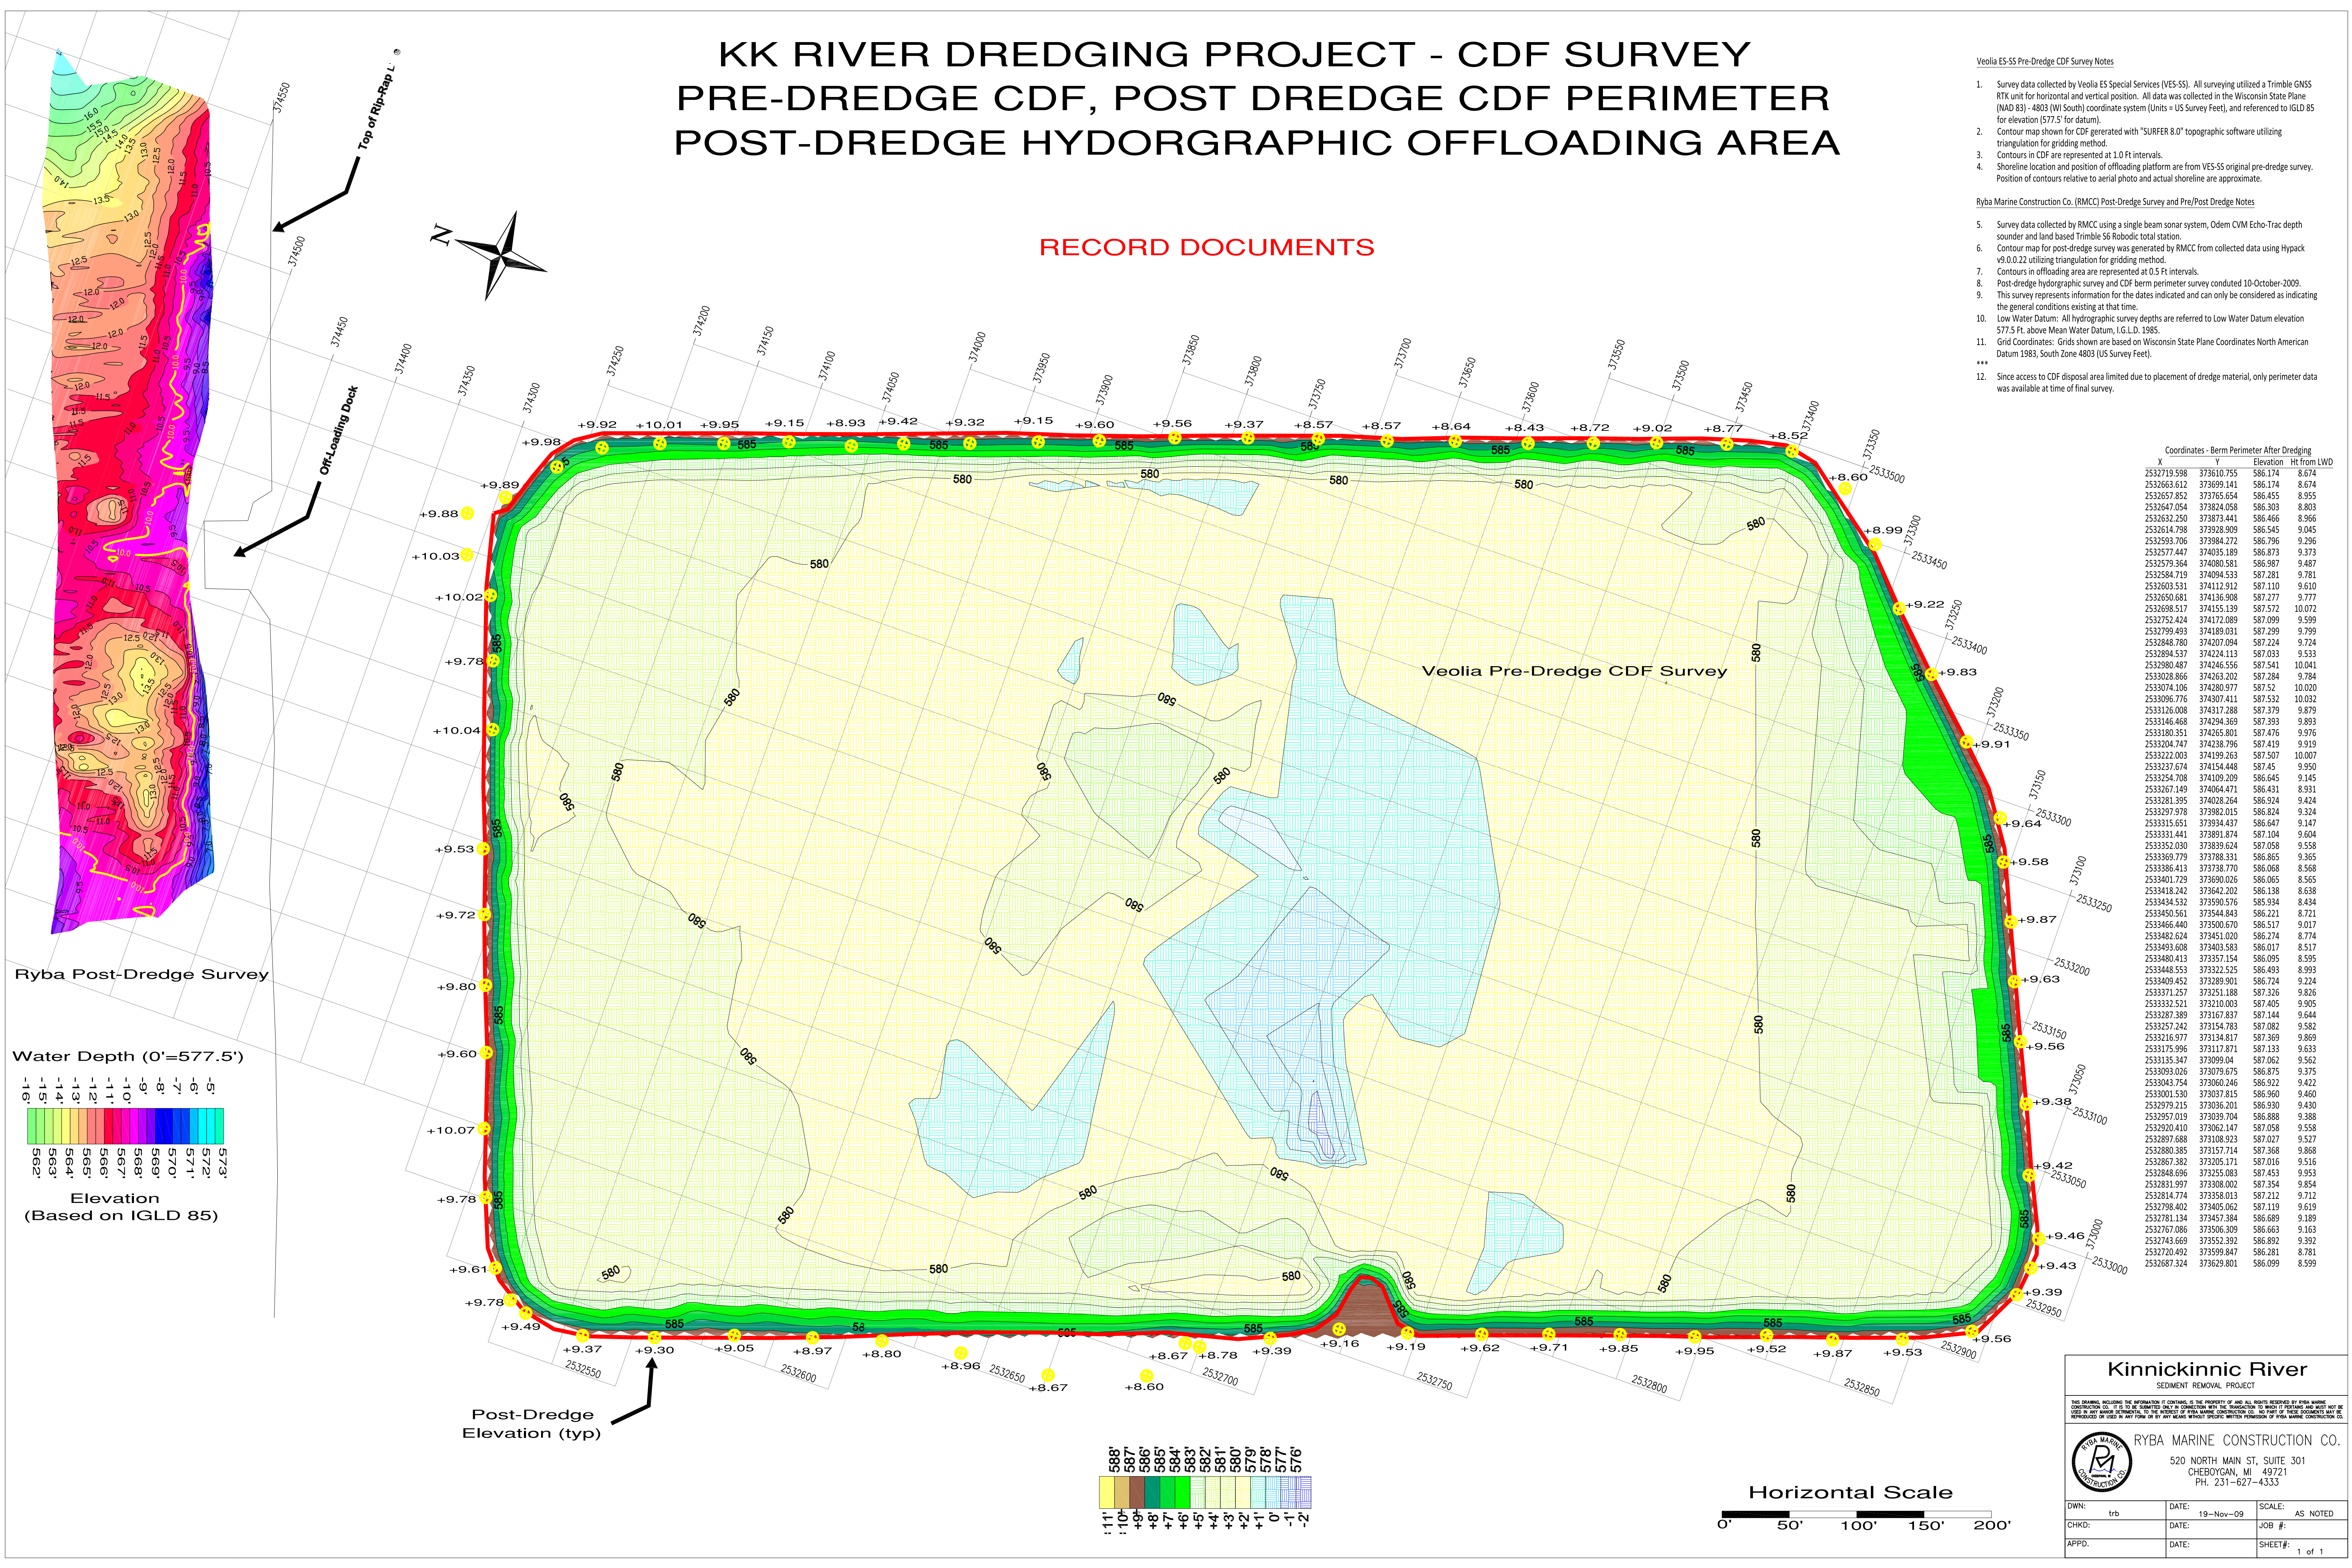

### RECORD DOCUMENTS

#### Veolia ES-SS Pre-Dredge CDF Survey Notes

1. Survey data collected by Veolia ES Special Services (VES-SS). All surveying utilized a Trimble GNSS RTK unit for horizontal and vertical position. All data was collected in the Wisconsin State Plane (NAD 83) - 4803 (W South) coordinate system (Units = US Survey Feet), and referenced to IGLD 85 for elevation (577.5' for datum).
2. Contour map shown for CDF generated with "SURFER 8.0" topographic software utilizing triangulation for gridding method.
3. Contours in CDF are represented at 1.0 Ft intervals.
4. Shoreline location and position of offloading platform are from VES-SS original pre-dredge survey. Position of contours relative to aerial photo and actual shoreline are approximate.

#### Ryba Marine Construction Co. (RMCC) Post-Dredge Survey and Pre/Post Dredge Notes

5. Survey data collected by RMCC using a single beam sonar system, Odom CVM Echo-Trac depth sounder and land based Trimble S6 Robotic total station.
6. Contour map for post-dredge survey was generated by RMCC from collected data using Hypack v9.0.0.22 utilizing triangulation for gridding method.
7. Contours in offloading area are represented at 0.5 Ft intervals.
8. Post-dredge hydrographic survey and CDF berm perimeter survey conducted 10-October-2009.
9. This survey represents information for the dates indicated and can only be considered as indicating the general conditions existing at that time.
10. Low Water Datum: All hydrographic survey depths are referred to Low Water Datum elevation 577.5 Ft. above Mean Water Datum, I.G.L.D. 1985.
11. Grid Coordinates: Grids shown are based on Wisconsin State Plane Coordinates North American Datum 1983, South Zone 4803 (US Survey Feet).
12. Since access to CDF disposal area limited due to placement of dredge material, only perimeter data was available at time of final survey.

**Groundwater Sample Collection and Results  
Construction of KK Cell at the Milwaukee Confined Disposal Facility  
Kinnickinnic River Sediment Remediation Project, Milwaukee, Wisconsin  
WA No. 041-RDRD-6081, Contract No. EP-S5-06-01**

PREPARED FOR: Ajit Vaidya/U.S. EPA  
PREPARED BY: Rob Stryker/CH2M HILL  
COPIES: Gina Bayer/CH2M HILL  
Larry Sullivan/Port of Milwaukee  
DATE: July 28, 2008  
PROJECT NUMBER: 363841.FD.06

## **Background**

According to Larry Sullivan with the Port of Milwaukee, the Port of Milwaukee has an existing agreement with the Milwaukee Metropolitan Sewerage District (MMSD) to discharge water to the sanitary sewer at the Milwaukee confined disposal facility (CDF). PCBs were not present in water ponded on the surface of the CFD based on samples collected in July and August 2007. However, work to create the Kinnickinnic Cell (Cell) within the CDF will involve dewatering from within the soil matrix rather than just ponded water, so CH2M HILL, on behalf of U.S. EPA, desired to collect groundwater samples that would be more representative of field conditions during construction of the Cell.

The Port of Milwaukee arranged to have their consultant, Giles Engineering Associates, Inc. of Waukesha, Wisconsin (Giles), work with CH2M HILL to collect the samples and submit them to a laboratory for PCB analysis. The reason for Giles' involvement was mainly because they had collected the 2007 samples and already had a laboratory under contract, and it was important to minimize time delay since the Cell construction bid documents were being issued to bidders very soon. Additionally, CH2M HILL asked Giles to request a one-week turnaround on the samples from the laboratory, rather than wait for the standard three-week turnaround for results.

## **Sample Collection**

The groundwater samples were collected on July 9, 2008 by Rob Stryker/CH2M HILL and Tom Bauman/Giles. A contractor to the Port of Milwaukee had been actively pumping out ponded water for two weeks, and based on the staining on the sheet piling along the west side of the CDF, the water level had dropped about nine inches to date. The ponded water was mostly within the footprint of the Cell.

Samples were collected from three locations, designated as HA-1, HA-2, and HA-3. The goal of the sample location selection was to be close to the ponded water and be approximately

equally spaced around the perimeter of the pond. Figure 1 shows approximate locations for the samples.

Shallow borings were advanced using a 3" diameter hand auger. After advancing the boring to a depth of approximately 3.5 feet, a cone was screwed onto the end of a five foot long section of 2" diameter PVC well screen, and the screen was pushed to the bottom of the boring (a new well screen was used at each location). The well screen was immediately purged dry using a disposable bailer, except for location HA-1, where purging stopped after the removal of 5 gallons of water because the well screen did not purge dry. The bailer was suspended in the well screen and the water was allowed to recover at least one hour before sampling.

The hand auger was decontaminated between boring locations by scraping with a brush and Alconox® solution followed by a distilled water rinse.

Groundwater samples were collected by slowly lowering the bailer into the top of the water column until it filled and then slowly removing the bailer. The water was sufficiently clear at all three locations to pour it directly into the sample jar without additional decanting. The idea was to obtain a water sample that would most closely resemble water generated by dewatering using well points and a settling tank, which is a likely dewatering scenario that the subcontractor might utilize during the Cell construction.

In addition to the three groundwater samples, an equipment blank was obtained by pouring reagent-grade HPLC (high performance liquid chromatography) water down a new disposable bailer and submitting that sample to the laboratory for PCB analysis. This sample was designated as "Bailer Rinsate Blank."

TestAmerica of Watertown, Wisconsin (TestAmerica) was the laboratory used for sample analysis. Sample jars were provided by TestAmerica, which were unpreserved one liter amber glass jars.

All used disposable gloves, well screens, bailers, and other miscellaneous items were placed in trash bags and taken offsite for disposal.

## Results

Results are attached to this memorandum. TestAmerica used EPA Method SW846 8082 to analyze for PCBs, and a total of 8 Aroclors were reported. The only Aroclor detected was PCB-1242, which was detected in all three groundwater samples at trace levels of 0.298 µg/l, 0.265 µg/l, and 0.248 µg/l in HA-1, HA-2, and HA-3, respectively (all three detections were flagged as "estimated" because they were below the reporting limit of 0.8 µg/l). None of the 8 Aroclors were detected in the Bailer Rinsate Blank.

Attention: Mr. Lawrence Sullivan  
Harbor Engineer

Subject: Sediment Sampling Results  
Confined Disposal Facility  
Lincoln Memorial Drive  
Milwaukee, Wisconsin  
Project No. 1E-0807003

Dear Mr. Sullivan:

In accordance with your July 2, 2008 request and authorization, Giles Engineering Associates, Inc. (Giles), Giles sampled the water within the sediment at the above-referenced property (herein referenced as the Site).

Water samples were collected from three locations as directed by Mr. Robert Stryker of CH2M Hill on July 9, 2008. The water samples were submitted to TestAmerica Analytical Testing Corporation for Polychlorinated Biphenyls (PCBs) (EPA Method 8082). Water samples collected for PCB analysis were placed in one-liter amber jars without preservative, and placed on-ice in a cooler.

Copies of the analytical reports and associated chain of custody documentation with this sampling event are enclosed with this letter.

We appreciate the opportunity to be of service on this project. If there are any questions regarding the information contained within this report, please feel free to call upon the undersigned at your convenience.

Respectfully submitted,

GILES ENGINEERING ASSOCIATES, INC.

## CERTIFICATION SUMMARY

### Subcontracted Laboratories

TestAmerica Analytical - Cedar Falls NELAC Cert #000668, Wisconsin Cert #999917270, Illinois Cert #000668, Minnesota Cert #019-999-319, Iowa Cert #007, North Dakota Cert #R-186  
704 Enterprise Drive - Cedar Falls, IA 50613

Method Performed: SW 8082

Samples: WRG0374-01, WRG0374-02, WRG0374-03, WRG0374-04

## DATA QUALIFIERS AND DEFINITIONS

- C1** Closing CCV out of control due to interference from previous sample.
- C8** Calibration Verification recovery was outside the method control limits for this analyte.
- C9** Calibration Verification recovery was outside the method control limits for this analyte. The LCS for this analyte met CCV acceptance criteria, and was used to validate the batch.
- J** Analyte detected at a level less than the Reporting Limit (RL) and greater than or equal to the Method Detection Limit (MDL). Concentrations within this range are estimated.

## ADDITIONAL COMMENTS

Results are reported on a wet weight basis unless otherwise noted.

### DATA QUALIFIERS AND DEFINITIONS

- J** Results reported between the Method Detection Limit (MDL) and Limit of Quantitation (LOQ) are less certain than results at or above the LOQ.
- MNR1** There was no MS/MSD analyzed with this batch due to insufficient sample volume. See Blank Spike.
- Z2** Surrogate recovery was above the acceptance limits. Data not impacted.
- Z5** Due to sample matrix effects, the surrogate recovery was outside acceptance limits. Secondary surrogate recovery was within the acceptance limits.

### ADDITIONAL COMMENTS

Results are reported on a wet weight basis unless otherwise noted.

Improving Water Quality

May 12, 2009

Mr. Larry Sullivan  
Port of Milwaukee  
2323 South Lincoln Memorial Drive  
Milwaukee, Wisconsin 53207

Subject: *Wastewater Discharge Permit 515.01*

Dear Mr. Sullivan:

Wastewater Discharge Permit 515.01 is enclosed for discharges from the confined disposal facility related to the dredging of the Kinnickinnic River. This permit establishes various effluent limits, sampling and reporting requirements, and other conditions for the discharge of wastewater to the District's sewerage system. Please carefully review the limits that apply and the sampling, reporting, and record-keeping requirements.

If you have any questions regarding your new permit or if you find errors, please contact me at 414-225-2275 or [tnowicki@mmsd.com](mailto:tnowicki@mmsd.com). Thank you for your cooperation.

Sincerely yours,

Thomas A. Nowicki, P.E.  
Senior Industrial Waste Engineer

# WASTEWATER DISCHARGE PERMIT 515.01

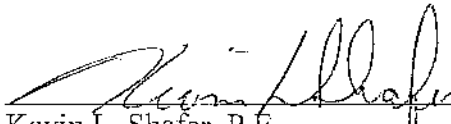

The Milwaukee Metropolitan Sewerage District (District) has issued this wastewater discharge permit to:

**Harbor Commission of the Port of Milwaukee  
Confined Disposal Facility  
2000 South Lincoln Memorial Drive  
Milwaukee, Wisconsin 53207**

This permit is issued according to sec. 200.45, Wis. Stats., and ch. 11, MMSD Rules. The Permittee shall comply with the pretreatment standards, monitoring requirements, and other conditions set forth in this permit.

Section 11.814, MMSD Rules, provides procedures for the administrative review of the conditions contained in this permit. These procedures are the exclusive means for the Permittee to seek amendments to this permit. The right to an administrative review of this permit expires 30 days after receiving this permit. Failure to exhaust these administrative review procedures may preclude judicial review. The Permittee must comply with this permit during the review in any forum of any challenge to this permit, according to sec. 11.815, MMSD Rules.

This permit becomes effective on the date of signature and expires at noon, **December 31, 2010**. The Permittee may continue discharging after this date only if the District reissues this permit. The Permittee must apply for renewal of this permit according to the requirements of sec. 11.305, MMSD Rules, at least 60 days before the expiration date of this permit.

## Part 1 - Limits

### 1.01 INTRODUCTION

Discharges from the outfalls regulated by this permit are subject to the local limits established by the District in sec. 11.203, MMSD Rules. Based upon these requirements, the District has established the limits in sec. 1.02 of this permit.

### 1.02 OUTFALL 1

(1) (a) Outfall 1 is near Lincoln Memorial Drive, inside the fence, north of Lincoln Avenue, under the I-794 bridge, at the outlet of the sump that receives supernatant discharges.

(b) All discharged supernatant shall flow through Outfall 1.

(2) The following limits apply to discharges from Outfall 1:

#### Outfall 1 Applicable Local Limits

Pollutant	Maximum For Any One Day (mg/L)
Arsenic, total	0.6
Cadmium, total	1.5
Chromium, total	64
Copper, total	6.0
Cyanide, total	2.9
Hexane extractable materials	300
Lead, total	2.0
Mercury, total	0.0026
Molybdenum, total	12
Nickel, total	4.0
Organic priority pollutants <sup>(1)</sup>	5.0
Polychlorinated biphenyl Aroclors <sup>(2)</sup>	0.005
Silver, total	5.8
Total suspended solids	100
Zinc, total	8.0

(1) Volatile and semi-volatile compounds only. The limit applies to the sum of the concentrations of the detected compounds.

(2) The limit applies to the sum of the concentrations of the detected Aroclors.

(3) The pH of the Permittee's discharge shall be greater than 5.0 at all times.

## Part 2 - Sampling

### 2.01 SAMPLING FREQUENCY

- (1) The Permittee shall sample for polychlorinated biphenyl Aroclors and total suspended solids starting with the first day of discharge and every three days of discharge afterwards. After results comply for six consecutive weeks, then the Permittee may reduce sampling to once per calendar week. After results comply for twelve consecutive months, then the Permittee may reduce sampling to once per month.
- (2) At least once within the first seven days of discharge, the Permittee shall sample for all of the pollutants listed in sec. 1.02(2). After the initial sampling, the Permittee shall sample for these pollutants at least once per calendar month. After the sixth month of sampling, sampling may cease for any pollutant present at less than 25% of the applicable limit in all preceding samples.

### 2.02 REPRESENTATIVE SAMPLES

The Permittee's self-monitoring shall represent production activities and discharges normally occurring during the reporting period.

### 2.03 SAMPLE COLLECTION AND ANALYSIS

- (1) The Permittee shall sample at Outfall 1.
- (2) The Permittee shall collect grab samples.
- (3) The Permittee shall collect, preserve, and analyze samples using techniques that provide sufficient precision and accuracy to measure the regulated pollutants at or below the applicable limit to a reasonable degree of scientific certainty, using analytical methods included in 40 CFR Part 136 or ch. NR 219, Wis. Adm. Code, or other methods approved by the Department of Natural Resources. For analysis, the Permittee shall use a laboratory certified or registered by the Department of Natural Resources, according ch. NR 149, Wis. Adm. Code, for the parameter being analyzed.
- (4) The Permittee shall measure pH either at the point of discharge, using a portable pH meter, or at a laboratory, using a grab sample free of acidic or alkaline preservatives.
- (5) Samples collected by the Permittee shall be independent of samples collected by the District.

## **2.04 Flow Monitoring**

The Permittee shall implement techniques and procedures to determine the volume discharged per day, such as a water meter or calculations using pumping time and pump capacity. The Permittee shall record the volume discharged per day.

## Part 3 - Reporting

### 3.01 SELF-MONITORING REPORTS

The Permittee shall submit to the District self-monitoring reports that include the following information. These reports are due before the date established by sub. (5).

#### (1) Sample results

The Permittee shall report to the District the results of all sampling required by part 2. If the Permittee monitors a pollutant more frequently than required by this permit using the sample type and the sample collection, preservation, and the analytical techniques set forth in part 2, then the Permittee shall also report the results of this monitoring to the District. Reports shall include:

- (a) The place, date, type, and time of the sample;
- (b) The names of the persons collecting the samples, the persons doing the analyses, and the laboratory performing the analyses;
- (c) The dates the analyses were performed;
- (d) The analytical techniques used; and
- (e) The analytical results.

#### (2) Average and maximum flow rates

- (a) For each outfall identified in sec. 1.02 of this permit, the Permittee shall report the average and maximum daily process wastewater flow rates for the period since the last period for which the Permittee reported these flow rates. For the Permittee's first report, the Permittee shall report flows for either the six months preceding the self-monitoring report or the time since the commencement of discharge, whichever is shorter. The Permittee shall indicate the starting and ending dates of the period covered by the reported flow rates.
- (b) If an outfall contains domestic wastewater or other non-process wastewater, then the Permittee shall include average and maximum flow rates for these types of wastewater.
- (c) The Permittee may estimate these flow rates.
- (d) The Permittee shall indicate whether the reported flows are measurements or estimates. If the Permittee is reporting estimated flows, then the Permittee shall provide all of the information and calculations used to obtain the estimates. If calculating an estimated flow by dividing a long-term discharge volume by a number of days, then the Permittee shall count only the days when a discharge occurred.

**(3) General certification**

The Permittee shall include the certification set forth in sec. 3.08 in self-monitoring reports.

**(4) Signature**

A person who satisfies the requirements of sec. 11.417, MMSD Rules, shall sign self-monitoring reports.

**(5) Report due date**

The Permittee shall submit self-monitoring reports to the District no later than the last day of the month following the month in which the sample was collected.

**3.02 HAULED WASTEWATER REPORTS**

- (1) On or before January 30 and July 30, the Permittee shall report wastewater shipments. Each report shall include information for the preceding six months. The Permittee may report more frequently.
- (2) For any wastewater that has been shipped off-site for disposal, the Permittee shall report the category, manufacturing process, volume, destination, hauler, and shipping date. For the purposes of this subsection, "wastewater" does not include sludge or solid waste shipped to treatment, storage, or disposal facilities licensed under solid and hazardous waste management laws.
- (3) The reports required by this section shall contain the certification set forth in sec. 3.08 and be signed according to sec. 11.417, MMSD Rules.

**3.03 REPORT OF VIOLATION AND RESAMPLING**

- (1) If sampling performed by the Permittee identifies a violation of any applicable pretreatment standard or requirement, the Permittee shall:
  - (a) Notify the District within 24 hours of becoming aware of the violation,
  - (b) Provide a written report with sample results to the District within 5 days after becoming aware of the violation, and
  - (c) Repeat the sampling and analysis and submit the results of the repeat analysis to the District within 30 days after becoming aware of the violation.
- (2) The reports required by sub. (1) shall contain the certification set forth in sec. 3.08 and be signed according to sec. 11.417, MMSD Rules.

### **3.04 REPORTING OF UPSETS, SPILLS, OTHER SLUGS, AND EMERGENCIES**

- (1) The Permittee shall immediately notify the District of an upset, spill, or other slug that has a reasonable potential to cause a violation of any pretreatment standard or requirement.
- (2) The report required by sub. (1) shall include:
  - (a) The location, date, and time of the discharge;
  - (b) The character and volume of the discharged material; and
  - (c) Containment or other corrective action taken by the Permittee.
- (3) Within 5 days after the report required by sub. (1), the Permittee shall submit to the District a written report describing the cause of the discharge, the duration of the discharge, and the measures taken by the Permittee to prevent similar occurrences in the future.
- (4) The report required by sub. (3) shall contain the certification set forth in sec. 3.08 and be signed according to sec. 11.417, MMSD Rules.
- (5) The Permittee shall immediately notify the District at 414-282-7200 (24 hours per day) of any emergency that may affect the sewerage system.

### **3.05 BYPASS REPORTS**

- (1) If the Permittee knows in advance of the need for a bypass, then the Permittee shall notify the District at least ten days before the bypass, if possible, or otherwise immediately.
- (2) If the Permittee has a bypass that causes a violation of a pretreatment standard or requirement and the Permittee did not anticipate the bypass, then the Permittee shall:
  - (a) Orally notify the District of the bypass within 24 hours of becoming aware of the bypass, and
  - (b) Provide a written notification within 5 days after becoming aware of the bypass that describes:
    1. The bypass and its cause;
    2. The date and time of when the bypass began and the date and time of either the end of the bypass, if the bypass has ceased, or the expected end of the bypass, if the bypass has not ceased; and
    3. The steps taken or planned to prevent reoccurrence of the bypass.

- (3) The report required by sub. (2)(b) shall contain the certification set forth in sec. 3.08 and be signed according to sec. 11.417, MMSD Rules.

### **3.06 NOTICE OF INTENT TO CHANGE DISCHARGE**

Before any activity that would either result in a 20 percent long-term increase or decrease in the volume of non-domestic wastewater discharged by the Permittee or that would significantly change the characteristics of the discharge, the Permittee shall submit a written Notice of Intent to the District.

### **3.07 HAZARDOUS WASTE REPORTS**

The Permittee shall report discharges of hazardous waste according to sec. 11.412, MMSD Rules.

### **3.08 GENERAL CERTIFICATION**

The reports required by this permit shall contain the following certification:

*I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.*

### **3.09 REPORTING ADDRESS**

The Permittee shall submit all reports required by this permit to the following address:

Milwaukee Metropolitan Sewerage District  
Industrial Waste Department  
260 West Seeboth Street  
Milwaukee, Wisconsin 53204-1446

## Part 4 - General Conditions

### 4.01 GENERAL PROHIBITIONS

#### (1) Compliance with rules

The Permittee may not discharge to the sewerage system except in compliance with ch. 11, MMSD Rules, and this permit.

#### (2) Interference

The Permittee may not discharge any pollutant to the sewerage system in a quantity or concentration that, alone or in conjunction with other discharges:

- (a) Inhibits or disrupts the sewerage system or its sludge processes; and
- (b)
  1. Is a cause of a violation of the District's WPDES permits or air pollution control permits;
  2. Increases the magnitude or duration of a violation;
  3. Prevents the use or disposal of sewage sludge in compliance with any applicable local, state, or federal statutes, ordinances, regulations, permits, or other requirements; or
  4. Inhibits the marketing of treated sewage sludge.

#### (3) Pass through

The Permittee may not discharge to the sewerage system any pollutant in a quantity or concentration that, alone or in conjunction with other discharges, is a cause of a discharge from the sewerage system to waters of the state that violates the District's WPDES permits or increases the magnitude or duration of a violation.

### 4.02 PROHIBITED DISCHARGES

The Permittee may not discharge to the sewerage system:

- (1) Pollutants that create a fire or explosion hazard in the sewerage system, including but not limited to pollutants that result in wastewater with a closed cup flashpoint of less than 60 C (140 F);
- (2) Pollutants that will cause corrosive structural damage to the sewerage system, including but not limited to discharges with a pH lower than 5.0 s.u.;
- (3) Solid or viscous pollutants that will obstruct the flow in the sewerage system;

- (4) Heat in amounts that will cause interference by inhibiting the biological activity in the treatment plant, including but not limited to heat in an amount that causes the influent of the treatment plant to exceed 40 C (104 F).
- (5) Used motor vehicle anti-freeze, motor oil, brake fluid, transmission fluid, hydraulic fluid, oil-based paint, and paint thinners if the material is in a collectable and recyclable quantity or if the discharge would result in a violation of the oil and grease limit set forth in sec. 11.203(1), MMSD Rules;
- (6) Pollutants that result in the presence of toxic gases, vapors, or fumes within the sewerage system in a quantity that may cause acute worker health and safety problems;
- (7) Hauled waste, except for hauled waste that:
  - (a) Consists only of domestic wastewater, and
  - (b) Is discharged at a point designated by the District;
- (8) Any substance that may cause the sewerage system's treatment residues, sludges, or scums to be unsuitable for reclamation and reuse, that causes interference with the reclamation process, or that inhibits the marketing of treated sewage sludge;
- (9) Any wastewater that contains radioactivity in amounts greater than a drinking water standard established by the U.S. Environmental Protection Agency or the Department of Natural Resources;
- (10) Storm water, surface water, groundwater, roof runoff, subsurface drainage, single pass non-contact cooling water, cooling tower blowdown, and reverse osmosis concentrate from any site served by separated sewers or riparian to waters of the state, according to sec. 11.202(10), MMSD Rules.
- (11) Any non-domestic wastewater before the District has approved a notice of intent submitted according to sec. 11.401, MMSD Rules; and
- (12) Any mass, concentration, or volume of a substance in excess of the amount allowed in this wastewater discharge permit.

#### **4.03 PROHIBITED POLLUTANTS**

The Permittee may not discharge to the sewerage system the following pollutants, excepts as provided in sec. 11.202(13), MMSD Rules:

## PROHIBITED POLLUTANTS

Acrolein	Furans
Alkylated lead	Heptachlor
Benzo(a)pyrene	Hexachlorobenzene
Chlordane	Lindane(BHC)
Dieldrin	Mirex
Dioxins	Pentachlorobenzene
3,3'-Dichlorobenzidine	Polybrominated biphenyl ethers
4,4'-Dichlorodiphenyltrichloroethane (DDT)	Polychlorinated biphenyls (PCBs)
Endosulfan	1,2,4,5-Tetrachlorobenzene
Endrin	Toxaphene
Fluoranthene	2,4,6-Trichlorophenol

### 4.04 DUTY TO MITIGATE

The Permittee shall take all reasonable actions necessary to minimize and correct any adverse impacts to the sewerage system or the environment resulting from noncompliance with this permit.

### 4.05 DILUTION PROHIBITION

The Permittee may not increase the use of process water or in any other way attempt to dilute a discharge as a partial or complete substitute for adequate treatment to achieve compliance with any applicable pretreatment standard or requirement. The District may impose mass limits on permittees who use dilution to meet the applicable pretreatment standards or requirements or in any other case where mass limits are appropriate.

### 4.06 BYPASS PROHIBITION

- (1) Intentional bypass is prohibited.
- (2) The Permittee shall report bypasses according to sec. 3.05.

### 4.07 PROPER DISPOSAL OF PRETREATMENT SLUDGE

The Permittee shall dispose sludges generated by wastewater treatment systems according to all applicable local, state, and federal requirements. If sludge is a hazardous waste according to the criteria set forth in sec. NR 605, Wis. Admin. Code, then the Permittee shall satisfy the requirements of either secs. NR 610 or NR 615, Wis. Admin. Code.

#### **4.08 COMPLIANCE WITH ALL LOCAL, STATE, AND FEDERAL REQUIREMENTS**

The Permittee shall comply with all applicable pretreatment standards and requirements set forth in ch. 11, MMSD Rules, the Code of Federal Regulations, and the Wisconsin Administrative Code, regardless of their enumeration in this permit.

#### **4.09 NO PROPERTY RIGHTS CREATED**

This permit does not convey or create any private property rights.

#### **4.10 PERMIT MODIFICATION**

The District may modify this wastewater discharge permit at any time to reflect changes in federal, state, or local law, to incorporate the terms of an order, or to reflect changed circumstances.

#### **4.11 PERMIT TRANSFER**

This wastewater discharge permit is issued to the Permittee for specific processes and operations at a specific location. If any person is seeking to become an owner of the facility to which this permit applies or operator of the processes or operations to which this permit applies, then that person shall apply to the District for a transfer of this wastewater discharge permit before becoming an owner or operator. If an owner or operator changes without the prior approval of the District, then this permit is void.

#### **4.12 SAMPLING LOCATION**

The Permittee may change sampling locations only after receiving approval from the District. The District shall ensure that any change in the Permittee's sampling location will not allow the Permittee to substitute dilution for adequate treatment.

#### **4.13 SAMPLING FACILITIES**

- (1) The Permittee shall provide sampling facilities that will be accessible and that will provide representative samples of the process wastewater.
- (2) The Permittee shall locate, construct, and maintain sampling facilities according to the requirements of the District.
- (3) The Permittee's sampling facility shall have sufficient room to allow the installation of sampling and flow monitoring devices.

- (4) The Permittee shall submit to the District plans and specifications for construction or modification of sampling facilities at least 30 days before the proposed commencement of construction or modification. If the Permittee constructs or modifies a sampling facility before District approval or without inspection during construction and if the District determines that the sampling facility is unacceptable, then the Permittee shall reconstruct or modify the sampling facility according to the requirements of the District.
- (5) The Permittee shall maintain sampling facilities in a safe, operating condition at all times.
- (6) The Permittee shall allow the District access to all sampling facilities according to the requirements of sec. 4.18.

#### **4.14 RECORD KEEPING REQUIREMENTS**

The Permittee shall retain and preserve for no less than 5 years all records relating to monitoring, sampling, and analyses made by or on behalf of the Permittee. If a record pertains to matters that are the subject of an order, litigation, or other enforcement action, then the Permittee shall retain and preserve the record until all enforcement activities have concluded and all periods of limitations for appeals have expired. The Permittee shall make these records available to the District upon request for inspection and copying.

#### **4.15 REVIEW OF PROPOSED TREATMENT FACILITIES**

- (1) If the Permittee is planning to install or modify treatment facilities or operations to comply with a categorical pretreatment standard, a pretreatment standard set forth in sec. 11.203, MMSD Rules, a permit condition, or an order of the District, then the Permittee shall provide the District with plans, specifications, and operating procedures for the proposed facilities. The District may approve, conditionally approve, or disapprove the plans, specifications, and operating procedures. The Permittee may not begin discharging from the treatment facilities until the Permittee has satisfied the requirements of the District.
- (2) The Wisconsin Department of Natural Resources has separate requirements for the review of plans, specifications, and operating procedures of proposed pretreatment facilities, such as the requirements set forth in sec. 144.04, Wis. Stats., and ch. NR 108, Wis. Admin. Code. The Permittee shall comply with these requirements before commencing discharges to the sewerage system.

#### **4.16 ADDITIONAL REPORTS**

In addition to the reports required by this permit and the reports specifically required by ch. 11, MMSD Rules, the District may require other reports, management plans, or other information whenever the District finds that such a requirement is necessary to fulfill the District's responsibilities under ch. 11, MMSD Rules, or any other local, state, or federal law.

#### 4.17 PUBLIC INFORMATION

All written information submitted to the District shall be available upon request to any person without restriction, according to sec. 19.35, Wis. Stats., unless:

- (1) The Permittee provides, at the time the Permittee submits the information, a written notice to the District that the Permittee claims that all or part of the information is exempt from disclosure according to sec. 19.36(5), Wis. Stats.; and
- (2) The Permittee demonstrates to the District's satisfaction that the information is a trade secret according to sec. 134.90(1)(c), Wis. Stats.

#### 4.18 RIGHT OF ENTRY

The Permittee consents to inspection and sampling by the District according to the requirements and limitations set forth in sec. 11.804, MMSD Rules.

#### 4.19 ADMINISTRATIVE REVIEW OF DISTRICT DECISIONS

The Permittee may seek administrative review of permit conditions and enforcement actions according to sec. 11.814, MMSD Rules. For purposes of judicial review, a District decision is not final until all of the available administrative review procedures have been exhausted.

#### 4.20 ENFORCEMENT

- (1) The District may obtain any remedy allowed by law for any violation of any pretreatment standard or requirement. According to secs. 11.801 to 11.823, MMSD Rules, enforcement options include: a notice of noncompliance, a notice of violation, an order, publication of the Permittee's name in a public notice of users in significant noncompliance, permit revocation, injunctive relief, civil penalties up to \$25,000 per day per violation, and criminal prosecution. Further information is provided in the District's *Enforcement Response Plan*.
- (2) If any person willfully or negligently violates any pretreatment standard or requirement, knowingly makes a false statement, representation or certification, or knowingly falsifies, tampers with, or renders inaccurate any monitoring device or analytical method, then that person may be subject to prosecution under the criminal laws of the State of Wisconsin or the United States, in addition to actions for civil remedies.
- (3) If a Permittee's discharge results in damage to or a deposit, obstruction, or impairment in the sewerage system, then the Permittee shall be liable to the District for the costs of cleaning, repairing, or replacing the affected components.
- (4) In any enforcement action against the Permittee, the District may recover the District's costs for sampling, analysis, other surveillance measures, and time devoted to the action by the District's legal counsel, engineering staff, administrative staff, or other personnel.

## **Part 5 - Special Conditions**

### **5.01 Notice of the Commencement of Discharge**

The Permittee shall notify the District of the commencement of discharge. The Permittee shall notify Mr. Thomas Nowicki at 414-225-2275 or [tnowicki@mmsd.com](mailto:tnowicki@mmsd.com) and Mr. Andrew Walloch at 414-325-5134 or [awalloch@mmsd.com](mailto:awalloch@mmsd.com).

### **5.02 Rain Delay**

Discharge is prohibited during rain and within 24 hours after the site receives one-half inch or more of rain.

### **5.03 Violation Delay**

If the Permittee obtains a sample result indicating a violation, then the Permittee must:

- (1) immediately cease discharging until the Permittee can ensure that future discharges will comply, and
- (2) notify the District by telephone or email within 24 hours.

### **5.04 Discharge Volume Reports**

The Permittee shall report the volume discharged per day and the total discharged for each month. This report is due before the end of the month following the month covered by the report. For example, measurements for June are due before the end of July.

Subject: *Wastewater Discharge Permit 515.01  
Amendment*

Dear Mr. Sullivan:

An amended page for Wastewater Discharge Permit 515.01 is enclosed. This amendment responds to the request received by the Milwaukee Metropolitan Sewerage District on May 18. The amendment affects sec. 2.01(2) and eliminates monthly sampling for all of the regulated pollutants.

If you have any questions or find errors, please contact me at 414-225-2275 or [tnowicki@mmsd.com](mailto:tnowicki@mmsd.com). Thank you for your cooperation.

Sincerely yours.

Thomas A. Nowicki, P.E.

## Part 1 - Limits

### 1.01 INTRODUCTION

Discharges from the outfalls regulated by this permit are subject to the local limits established by the District in sec. 11.203, MMSD Rules. Based upon these requirements, the District has established the limits in sec. 1.02 of this permit.

### 1.02 OUTFALL 1

(1) (a) Outfall 1 is near Lincoln Memorial Drive, inside the fence, north of Lincoln Avenue, under the I-794 bridge, at the outlet of the sump that receives supernatant discharges.

(b) All discharged supernatant shall flow through Outfall 1.

(2) The following limits apply to discharges from Outfall 1:

#### Outfall 1 Applicable Local Limits

Pollutant	Maximum For Any One Day (mg/L)
Arsenic, total	0.6
Cadmium, total	1.5
Chromium, total	64
Copper, total	6.0
Cyanide, total	2.9
Hexane extractable materials	300
Lead, total	2.0
Mercury, total	0.0026
Molybdenum, total	12
Nickel, total	4.0
Organic priority pollutants <sup>(1)</sup>	5.0
Polychlorinated biphenyl Aroclors <sup>(2)</sup>	0.005
Silver, total	5.8
Total suspended solids	100
Zinc, total	8.0

(1) Volatile and semi-volatile compounds only. The limit applies to the sum of the concentrations of the detected compounds.

(2) The limit applies to the sum of the concentrations of the detected Aroclors.

(3) The pH of the Permittee's discharge shall be greater than 5.0 at all times.

## Part 2 - Sampling

### 2.01 SAMPLING FREQUENCY

- (1) The Permittee shall sample for polychlorinated biphenyl Aroclors and total suspended solids starting with the first day of discharge and every three days of discharge afterwards. After results comply for six consecutive weeks, then the Permittee may reduce sampling to once per calendar week. After results comply for twelve consecutive months, then the Permittee may reduce sampling to once per month.
- (2) At least once within the first seven days of discharge, the Permittee shall sample for all of the pollutants listed in sec. 1.02(2).

### 2.02 REPRESENTATIVE SAMPLES

The Permittee's self-monitoring shall represent production activities and discharges normally occurring during the reporting period.

### 2.03 SAMPLE COLLECTION AND ANALYSIS

- (1) The Permittee shall sample at Outfall 1.
- (2) The Permittee shall collect grab samples.
- (3) The Permittee shall collect, preserve, and analyze samples using techniques that provide sufficient precision and accuracy to measure the regulated pollutants at or below the applicable limit to a reasonable degree of scientific certainty, using analytical methods included in 40 CFR Part 136 or ch. NR 219, Wis. Adm. Code, or other methods approved by the Department of Natural Resources. For analysis, the Permittee shall use a laboratory certified or registered by the Department of Natural Resources, according ch. NR 149, Wis. Adm. Code, for the parameter being analyzed.
- (4) The Permittee shall measure pH either at the point of discharge, using a portable pH meter, or at a laboratory, using a grab sample free of acidic or alkaline preservatives.
- (5) Samples collected by the Permittee shall be independent of samples collected by the District.

Subject: *Wastewater Discharge Permit 515.01  
Correction*

Dear Mr. Sullivan:

A corrected page for Wastewater Discharge Permit 515.01 is enclosed. This permit is for the confined disposal facility on South Lincoln Memorial Drive. The correction eliminates semi-volatile organic compounds from the sampling requirements in sec. 2.01(2) on page 4.

If you have questions or find errors, please contact me at 414-225-2275 or [tnowicki@mmsd.com](mailto:tnowicki@mmsd.com). Thank you for your cooperation.

Sincerely yours,

Thomas A. Nowicki, P.E.  
Senior Industrial Waste Engineer

Permits/letters/Confined Disposal

## Part 1 - Limits

### 1.01 INTRODUCTION

Discharges from the outfalls regulated by this permit are subject to the local limits established by the District in sec. 11.203, MMSD Rules. Based upon these requirements, the District has established the limits in sec. 1.02 of this permit.

### 1.02 OUTFALL 1

(1) (a) Outfall 1 is near Lincoln Memorial Drive, inside the fence, north of Lincoln Avenue, under the I-794 bridge, at the outlet of the sump that receives supernatant discharges.

(b) All discharged supernatant shall flow through Outfall 1.

(2) The following limits apply to discharges from Outfall 1:

#### Outfall 1 Applicable Local Limits

Pollutant	Maximum For Any One Day (mg/L)
Arsenic, total	0.6
Cadmium, total	1.5
Chromium, total	64
Copper, total	6.0
Cyanide, total	2.9
Hexane extractable materials	300
Lead, total	2.0
Mercury, total	0.0026
Molybdenum, total	12
Nickel, total	4.0
Organic priority pollutants <sup>(1)</sup>	5.0
Polychlorinated biphenyl Aroclors <sup>(2)</sup>	0.005
Silver, total	5.8
Total suspended solids	100
Zinc, total	8.0

(1) Volatile and semi-volatile compounds only. The limit applies to the sum of the concentrations of the detected compounds.

(2) The limit applies to the sum of the concentrations of the detected Aroclors.

(3) The pH of the Permittee's discharge shall be greater than 5.0 at all times.

## **Part 2 - Sampling**

### **2.01 SAMPLING FREQUENCY**

- (1) The Permittee shall sample at least once in each of the following three month periods:  
January through March, April through June, July through September, and October through December.
- (2) The Permittee shall sample for polychlorinated biphenyl Aroclors and total suspended solids.

### **2.02 REPRESENTATIVE SAMPLES**

The Permittee's self-monitoring shall represent production activities and discharges normally occurring during the reporting period.

### **2.03 SAMPLE COLLECTION AND ANALYSIS**

- (1) The Permittee shall sample at Outfall 1.
- (2) The Permittee shall collect grab samples.
- (3) The Permittee shall collect, preserve, and analyze samples using techniques that provide sufficient precision and accuracy to measure the regulated pollutants at or below the applicable limit to a reasonable degree of scientific certainty, using analytical methods included in 40 CFR Part 136 or ch. NR 219, Wis. Adm. Code, or other methods approved by the Department of Natural Resources. For analysis, the Permittee shall use a laboratory certified or registered by the Department of Natural Resources, according ch. NR 149, Wis. Adm. Code, for the parameter being analyzed.
- (4) The Permittee shall measure pH either at the point of discharge, using a portable pH meter, or at a laboratory, using a grab sample free of acidic or alkaline preservatives.
- (5) Samples collected by the Permittee shall be independent of samples collected by the District.

**Residuals Management Decision Tree**

---

Summary of additional discussion on the decision tree for the post remediation plans for the Kinnickinnic River Environmental Restoration/Sediment Remediation Project (KK Project)

10- 3:30 pm

June 24, 2009

Attendees: Diana Mally – EPA, Robert Stryker – CH2M Hill, Regina Bayer- CH2M Hill  
Marsha Burzynski – WDNR, and Xiaochun Zhang – WDNR

10- 11:30 am

July 2, 2009

Attendees: Diana Mally – EPA, Robert Stryker – CH2M Hill, and Xiaochun Zhang – WDNR

As of July 2, 2009, a final decision has been made for post remediation actions based on continuous discussions. The goal of the discussion is to evaluate the existing chemistry based decision tree and integrate that with engineering feasibility of implementing the decision for a cost effective plan after remediation is completed at each sediment management unit. Over the discussion based on the early processes, a total of four residual cover options were considered including 1) no action, 2) 6” sand cover, 3) enhanced cover with 12” sand or gravel; and 4) engineering cap. As a result we decided to apply options 1) to 3) at the project site. This decision was based on careful evaluation of the decision tree and processes with the first line of action of re-dredging whenever applicable if the residual PCB and PAHs exceed action levels.

In addition to the information provided in the decision tree that was documented earlier, there are a few critical endpoints that have been agreed upon by the project team as follows:

- It is very much difficult to capture the true “fluffy layer” (top 6”), the newly settled sediment right after dredging. The concentrations do not trigger critical actions unless PCB>10ppm and PAH>100ppm in Zone A and PCBs < 1 and PAHs< 37ppm in Zone B. Therefore, we will treat the top 6” as the Zone A whether it’s a “fluffy layer” or mixed with inventory sediment that has not be dredged.
- Geostatistical analyses using ArcMap with spatial analyst in lieu of EVS. Kriging will be applied to the area with a cell grid size of 20’x20’. Action subunit within each SMU will be 60’x60’. After redredging no additional geostatistical analyses will be performed.
- Additional cores (about 7) in SMU 1 will be placed in areas that the probability of exceeding criteria is high and the 1940 sound data showed deeper water depth compared to the dredge cut line.
- Additional cores might be needed for other RMUs but the number of additional cores and their locations will be determined in a later time.
- Assuming that the soft sediment thickness (D) is greater than 48”, segmentation of the cores will follow the scheme as described below (note the illustration is not to scale)

A	0-6"
B	6"-12"
C1	12"-30"
C2	30"-48"
C3	48"-native material
Native Material	

- If the thickness of inventory sediment post remediation is greater than 48" (4 feet) then another layer of sediment (48"-native material) will be collected for analyses for determination of the thickness of cover needed if PCB and PAH concentrations still exceed post remediation action levels.
- Native material will be collected from every location and a sample will be analyzed for PCB and PAHs. Samples selected for analyses will be biased to be representative for each RMU for decision making purpose. The features of particular interests are the side slope vs. center channel.
- Due to the history of the site in specific and hydrodynamic nature of sediment transport in general, not every area exists more than 48" sediment. There will be typical five different scenarios as shown below. Decision was made that if the thickness ( $D_x$ , where  $x = \text{zone}$ ) of soft sediment in each zone except Zone A is  $\leq 3'$ , then it will be combined to the zone overlying it. For instance, if the soft sediment thickness in "Zone B" ( $D_b$ ) is less than or equal to 3' then it will be combined to Zone A. If  $D_b$  is  $> 3'$  then it will be treated as a separate zone.
- Decision was made that the maximum thickness to be dredged will be 4 feet. On the basis of case by case, if there are still some sediment existing 4 feet that contain elevated PCB and/or PAHs, the project team will make a decision to deploy a thicker sand layer.

Considering the variation of soft sediment thickness after remediation, a total of five different scenarios may be possible in the project area as follows:

Scenario 1 (S1): the thickness (D) of soft sediment is less than 6" ( $D \leq 6''$ )

A	0-6"
Native Material	Analyze selective samples

Scenario 2 (S2): the thickness (D) of soft sediment is between 6"-12" ( $6 \leq D \leq 12''$ )

A	0-6"
B	6"-12"
Native Material	Analyze selective sample

Scenario 3 (S3): the thickness (D) of soft sediment is between 12"-30" ( $12'' \leq D \leq 30''$ )

A	0-6"
B	6"-12"
C1	12"- 30"
Native Material	Analyze selective samples

Scenario 4 (S4): the thickness (D) of soft sediment is between 30"-48" ( $30'' \leq D \leq 48''$ )

A	0-6"
B	6"-12"
C1	12"-30'
C2	30"-48"
Native Material	Analyze selective samples

Scenario 5 (S5): the thickness (D) of soft sediment is  $\geq 48''$  ( $D \geq 48''$ )

A	0-6"
B	6"-12"
C1	12"-30"
C2	30"-48"
C3	48"-native material
Native Material	Analyze selective samples

As described above, the soft sediment thickness after vary, which will result in a total of four different decision processes. These decision processes are illustrated in the flowcharts as shown in Figures 1-4. There may be exceptions, the project team will discuss and make decision when that occasion comes.

**Figure 1. Decision process for S1**

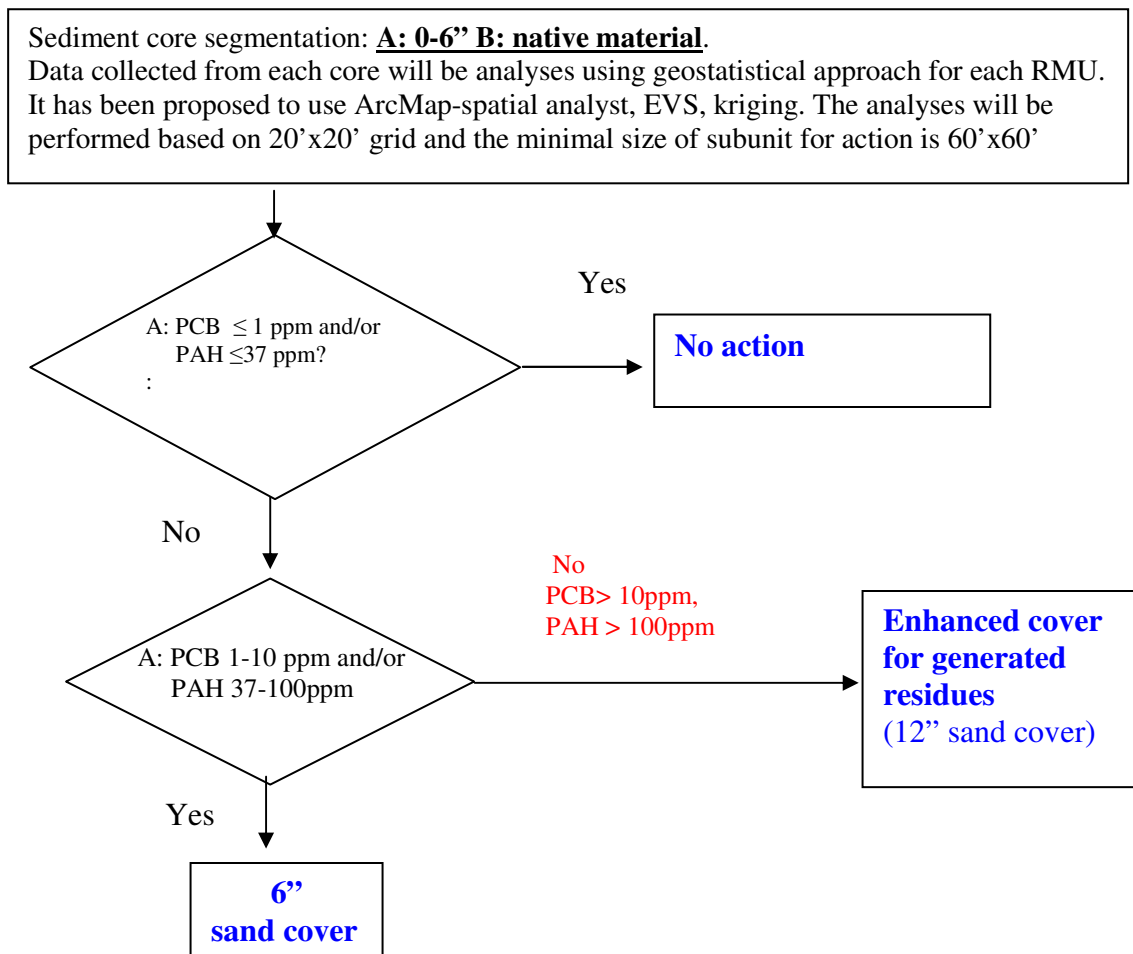

Figure 2 Decision process for S2

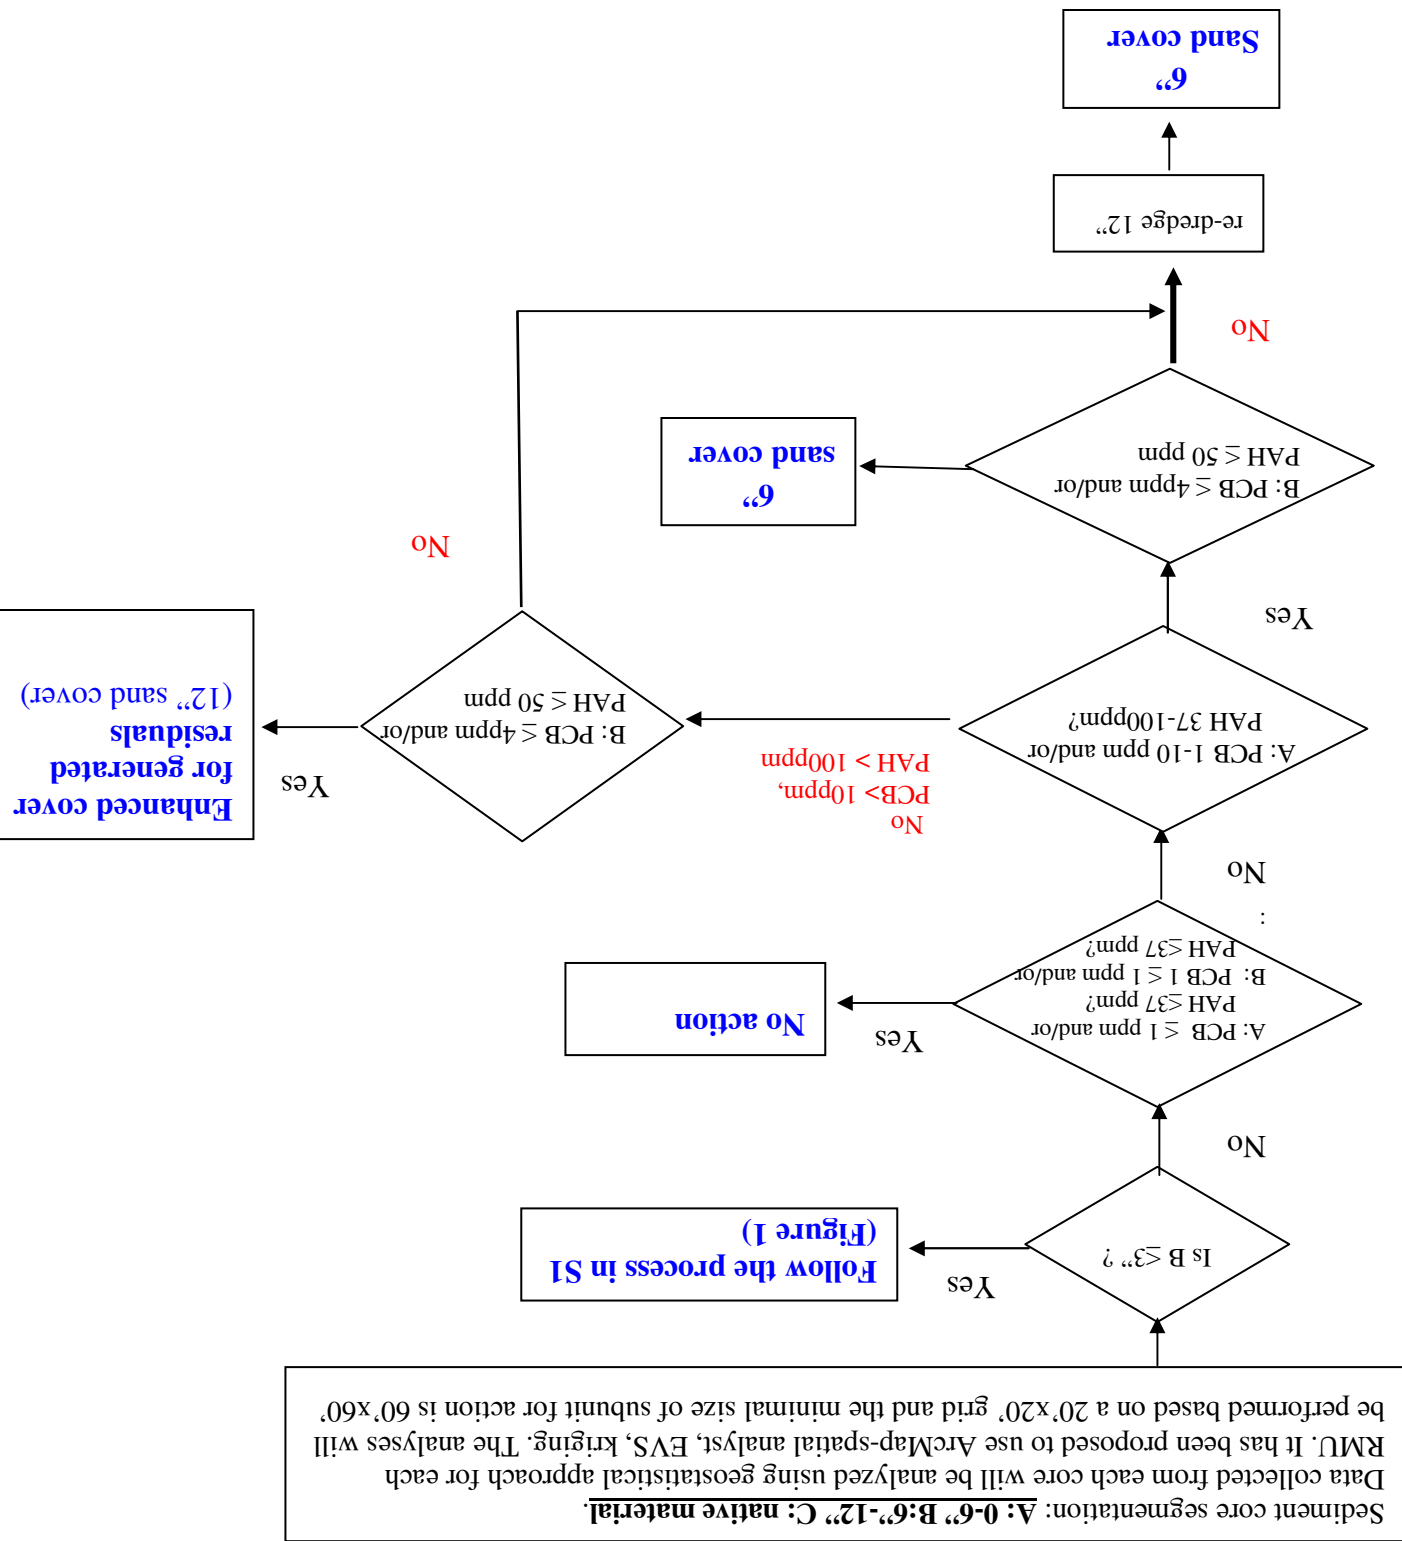

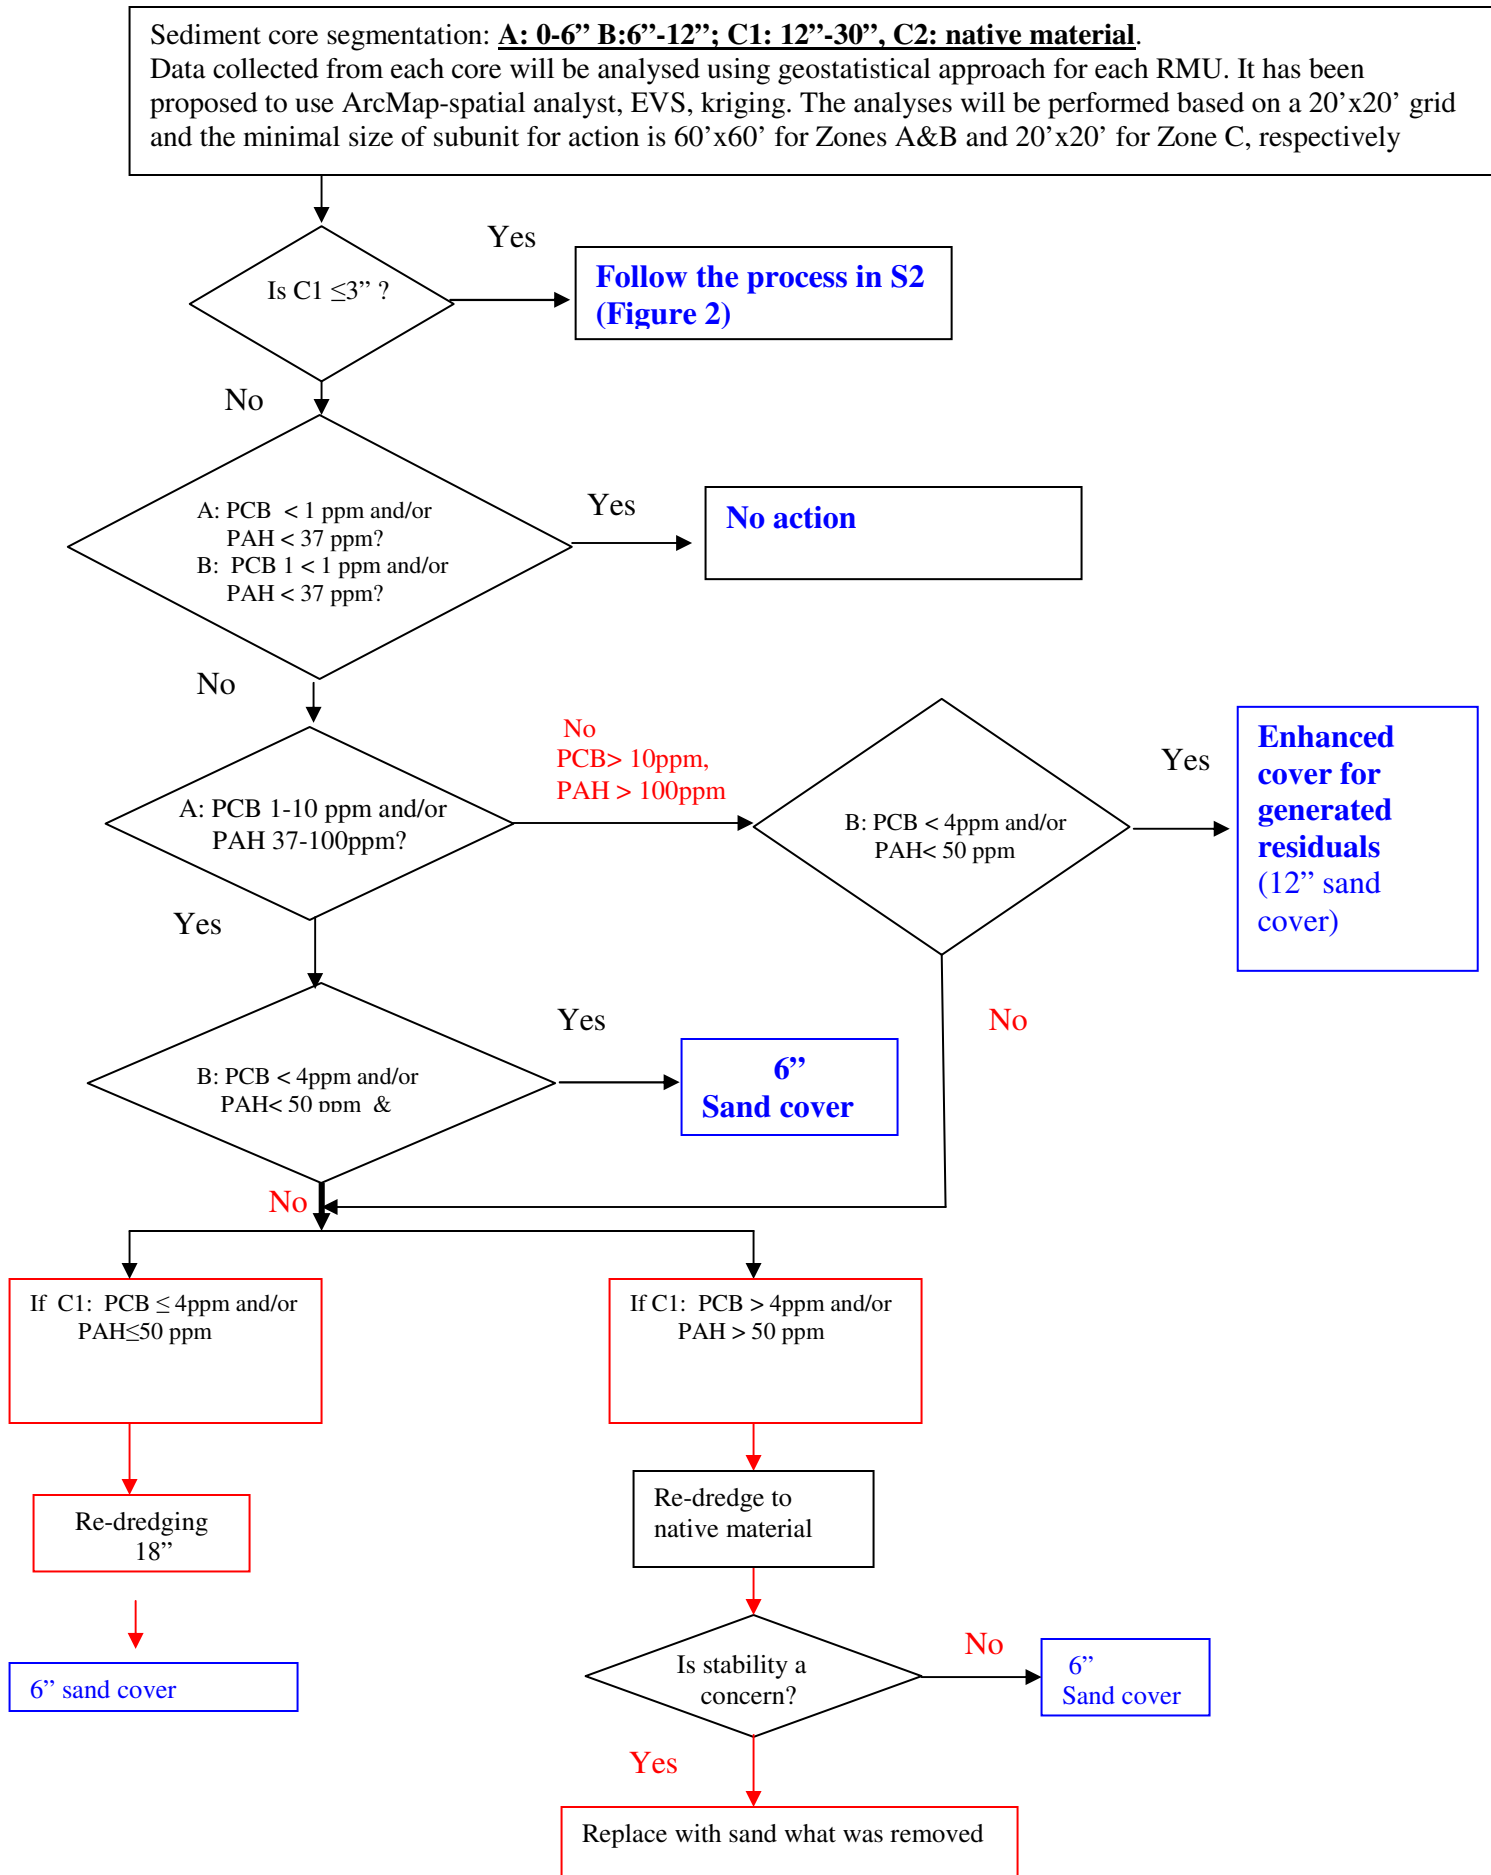

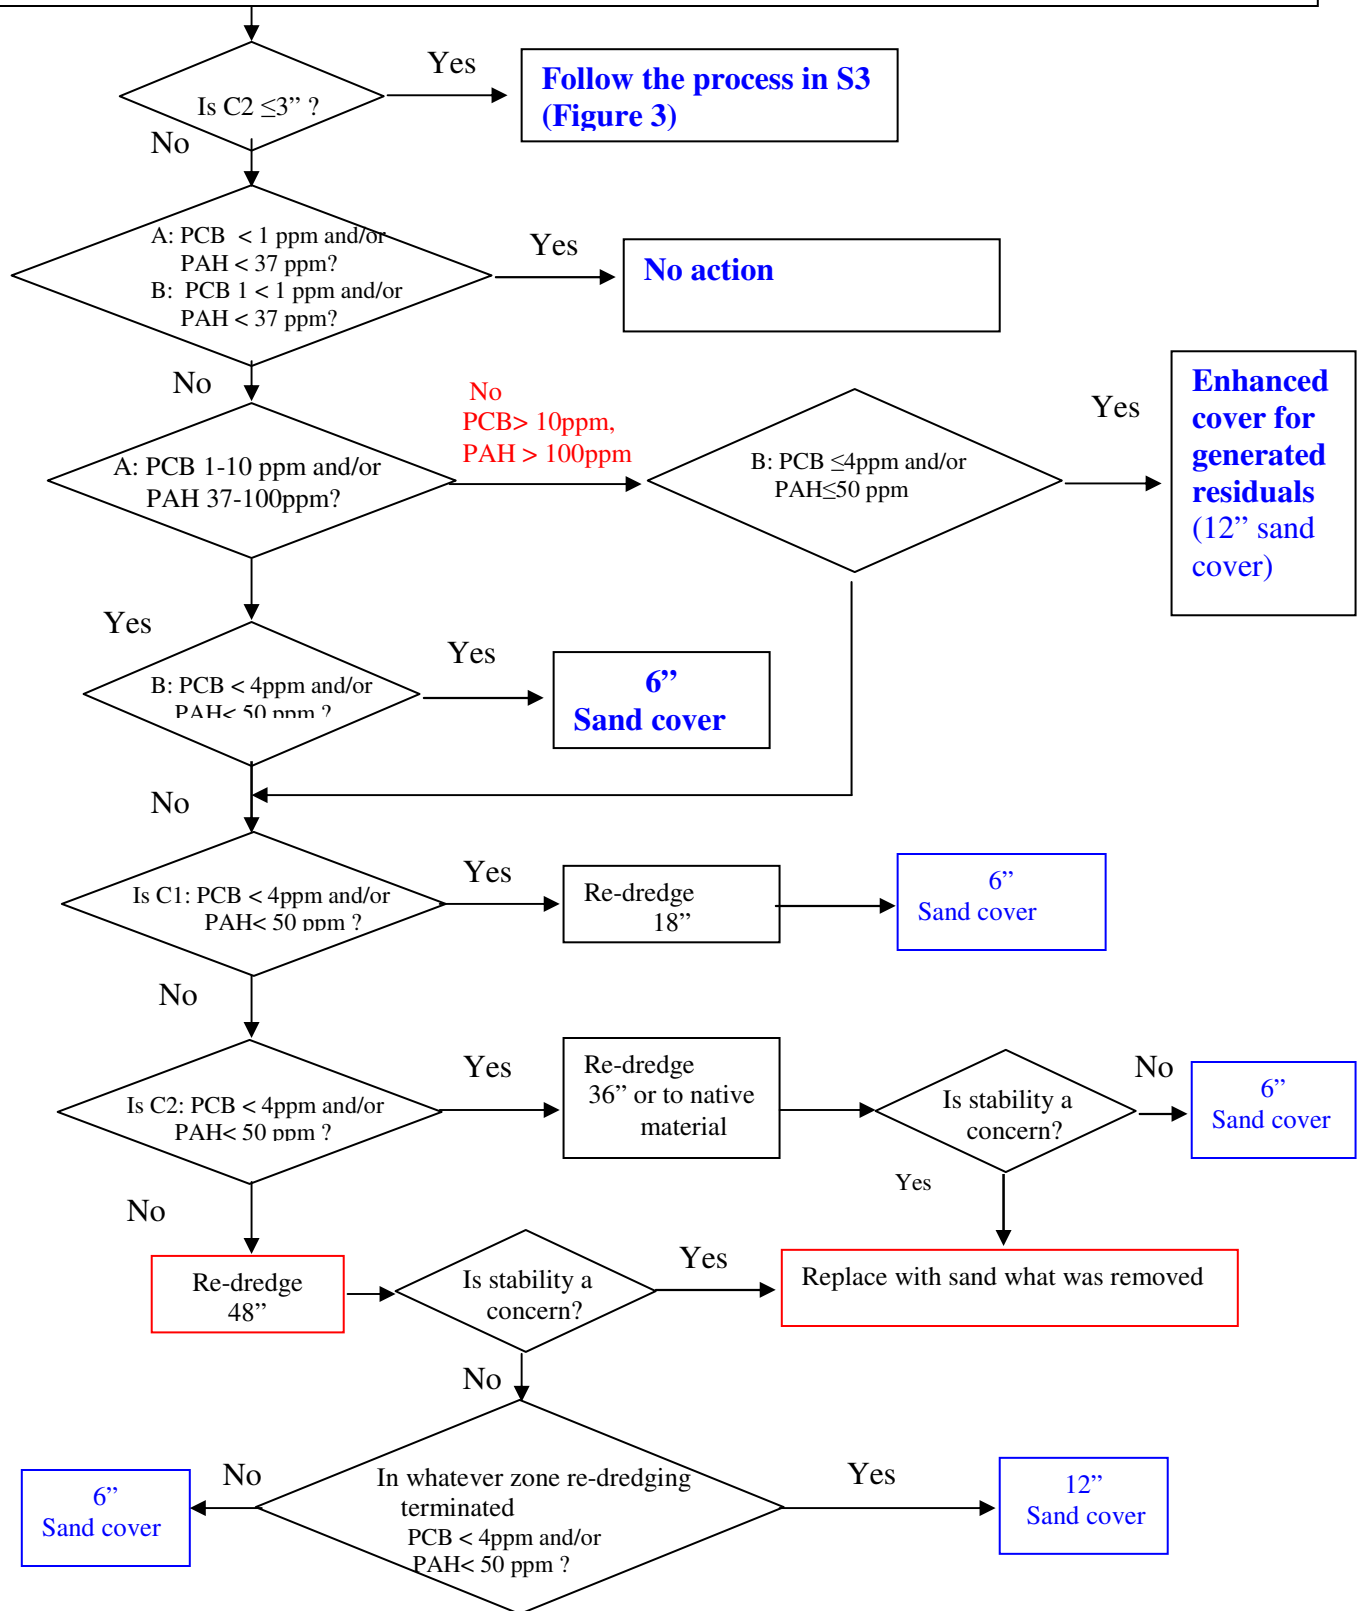

Figure 3. Decision process for Scenario 3

**Figure 4. Decision process for Scenarios 4 and 5**

Sediment core segmentation: **A: 0-6" B:6"-12"; C1: 12"-30", C2: 30"-48" or 30"-native material, C3: 48"-native material or native material.** Data collected from each core will be analyzed using geostatistical approach for each RMU. It has been proposed to use ArcMap-spatial analyst, EVS, kriging. The analyses will be performed based on a 20'x20' grid and the minimal size of subunit for action is 60'x60' for Zones A&B and 20'x20' for Zone C, respectively

# Kinnickinnic River Area of Concern – Data Quality Evaluation

PREPARED FOR:           Ajit Vaidya/USEPA, GLNPO  
                                  Louis Blume/USEPA, GLNPO

PREPARED BY:           Shannon Olson/CH2M HILL

COPIES TO:             Rob Stryker/CH2M HILL

DATE:                    December 28, 2010

## Introduction

The objective of the Data Quality Evaluation memorandum is to assess the data quality of analytical results for samples collected at the Kinnickinnic River, within the Milwaukee River Estuary Area of Concern in Milwaukee, Wisconsin, June 2009 through April 2010. Samples were collected and analyzed with the objective to characterize sediment, monitor water quality, and protect human health and the environment during dredging operations. Individual method requirements and guidelines from the Quality Assurance Project Plan (QAPP) (CH2M HILL, 2009), *Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (USEPA, 2008), and *Contract Laboratory Program National Functional Guidelines for Inorganic Data Review* (USEPA, 2004) were used in this assessment.

This report is intended as a general data quality assessment designed to summarize data issues.

## Analytical Data

The analytical laboratory analyses for samples collected included:

- 39 wastewater samples (including field quality control [QC] samples and four field duplicate [FD] samples) from the dewatering cell were analyzed for one or more of the following: polychlorinated biphenyl (PCB) Aroclors and total suspended solids (TSS).
- 411 sediment samples from 77 locations (including field QC samples, 37 FD samples, and 7 equipment blank [EB] samples) were analyzed for one or more of the following: PCB Aroclors, polycyclic aromatic hydrocarbons (PAHs), and grain size.
- 45 ponar grab sediment samples (including field QC samples, 5 FD samples, and 1 EB sample) were analyzed for one or more of the following: PCB Aroclors and PAHs.
- 22 surface water samples (including field QC samples and two FD samples) were analyzed for TSS.

- FD samples were collected for the same analyses as the parent sample at the given location.
- EBs were collected during the sampling events to evaluate field sampling and decontamination procedures.

The PCB Aroclor and PAH data were analyzed by the USEPA Contract Laboratory Program (CLP). Approximately 20 wastewater samples (including field QC samples) and 291 sediment samples (including field QC samples) were subsequently reviewed by the USEPA validating contractor, ESAT. Approximately 16 wastewater samples (including field QC samples), 120 sediment samples (including field QC samples) and 45 ponar grab samples (including field QC samples) were not reviewed by ESAT. This data was reviewed only by the software program Computer Aided Data Review and Evaluation (CADRE), which performs a review of data quality by comparing the quality control results to a preprogrammed set of criteria. The criteria used for this evaluation are defined in the CLP National Functional Guidelines. All CLP data are reviewed by the CADRE software program. Appendix A contains the case narratives prepared by ESAT during data reviews. The findings of the reviews are summarized in the following paragraphs. See Appendix B for the PCB Aroclor and PAH data summary.

The TSS samples were analyzed by the USEPA Central Regional Laboratory (CRL). Grain size samples were analyzed by the University of Wisconsin Soil and Plant Analysis Lab (SPL). Both analyses were reviewed by CH2M HILL. See Appendix B for the TSS and grain size data summary.

Samples were collected and shipped by overnight carrier to the laboratories for analysis. Selected samples were analyzed for one or more of the analytes/methods in Table 1.

TABLE 1  
Analytical Parameters

Parameter	Method	Laboratory
PCB Aroclors	SOM01.2 Modified	CLP
PAHs	SOM01.2 Modified	CLP
TSS	2540 D	CRL
Grain Size	ASTM method D422	SPL

The ESAT assessment of data included a review of the following:

- Chain-of-custody documentation
- Holding-time compliance
- Required QC samples at the specified frequencies
- Instrument calibration
- Flagging for method blanks
- Laboratory control spiking samples
- Surrogate spike recoveries for organic analyses
- Analytical spike data
- Matrix spike/matrix spike duplicate samples on a site/location basis
- Equipment blank samples
- Field duplicate samples

Data qualifiers are assigned according to the QAPP. These qualifiers are entered into the electronic database. Multiple qualifiers are routinely applied to specific sample method/matrix/analyte combinations, but there will be only one final qualifier. A final

qualifier is applied to the data and is the most conservative of the applied validation qualifiers. The final qualifier also includes matrix and blank sample impacts.

The data qualifiers are those listed in the QAPP and are defined below:

- J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- R = The sample result was rejected because of serious deficiencies in the ability to analyze the sample and meet the QC criteria. The presence or absence of the analyte could not be verified.
- U = The analyte was analyzed but was not detected above the reported sample quantitation limit.
- UJ = The analyte was not detected above the reported sample quantitation limit; however, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

## Findings

The overall summaries of the data validation findings are contained in the following sections.

### PCB Aroclor Data

PCB Aroclor data were assessed for 38 wastewater samples and 411 sediment samples from 77 locations and 45 ponar grab sediment samples. The data were analyzed through the CLP and were partially reviewed by the USEPA contractor, ESAT.

In summary of the PCB Aroclor data, J or UJ qualifiers were applied to sample results that were potentially affected by QC deficiencies. J qualifiers were also applied to sample results that were reported between the method detection limit (MDL) and the reporting limit (RL).

There were 11 PCB sediment results where the sum of the preliminary results was significantly different from the sum of the validated results. These few instances were due to Aroclor results exceeding the instruments calibration range in the preliminary run. A dilution was required to bring the result within acceptable calibration range. The dilution concentration was then used as the final result, which affected the total summations between the preliminary and the validated results.

PCB Aroclor-1254 was rejected from one sample, KK-SD062-B, and should not be used to make project decisions. The reason this result was rejected could not be determined because it was reviewed only by the CADRE software, which does not explicitly reveal why qualifiers are being applied to the data.

### PAH Data

PAH data were assessed for 411 sediment samples from 77 locations and 45 ponar grab sediment samples. The data were analyzed through the CLP and were partially reviewed by the USEPA contractor, ESAT.

PAH data required that a result be selected from the initial, the dilution, the selective ion monitoring (SIM) initial or the SIM dilution run, as applicable. SIM analysis was performed when the regular PAH method produced a non-detected result for any of the analytes. Dilutions were necessary when the instruments calibration range was exceeded. Figure 1 shows a decision tree on how the results were selected.

In summary of the PAH data, J or UJ qualifiers were applied to sample results that were potentially affected by QC deficiencies. J qualifiers were also applied to sample results that were reported between the MDL and the RL.

None of the reported PAH results were rejected. One hundred percent of this data, as qualified, can be used to make project decisions.

### **TSS and Grain Size Data**

TSS data were assessed for one wastewater sample and 22 surface water samples and one wastewater sample. Grain size data were assessed for 120 sediment samples from 24 locations. The TSS data were analyzed through the CRL, while the grain size data were analyzed through the SLP. All data were reviewed by CH2M HILL.

The data set underwent a forms review by CH2M HILL staff to assess the lab notes and precision of the field duplicate samples, and to determine completeness of the data set. Data qualifiers were added by CH2M HILL validators when the QC statistics indicated a possible bias to specific compounds or analytes associated with a particular method and sample batch.

Two FD pairs were collected and analyzed for TSS, and precision criteria were met.

None of the reported TSS or grain size results were rejected. One hundred percent of this data, as qualified, can be used to make project decisions.

### **Overall Assessment**

The final activity in the data quality evaluation is an assessment of whether the data meets the data quality objectives. The goal of the assessment is to demonstrate that a sufficient number of representative samples were collected, and that the resulting analytical data can be used to support the decision making process. The following summary highlights the data evaluation findings for the events defined above:

1. The completeness objective of 90 percent was met for all method/analyte combinations.
2. The precision and accuracy of the data, as measured by field and laboratory QC indicators, suggest that the data quality objectives were met.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
REGION V  
SUPERFUND DIVISION

DATE:

SUBJECT: Review of Data  
Received for Review on: June 26, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

SITE Name: KinnicKinnic River (WI)

Case Number: 38637 SDG Number: E3ZR6

Number and Type of Samples: 2 water Samples (Aroclors only)

Sample Numbers: E3ZR6, E3ZR7

Laboratory: KAP Technologies, Inc. Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38637  
Site Name: KinnicKinnic River (WI)

Page 2 of 5  
SDG Number: E3ZR6  
Laboratory: KAP Technologies Inc

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Two (2) water samples labeled E3ZR6 and E3ZR7, were shipped to KAP Technologies, Inc located in The Woodlands, Texas. Sample E3ZR6 was collected on June 4, 2009 and received on June 5, 2009 intact with a cooler temperature of 1.1°C. Sample E3ZR7 was collected on June 9, 2009 and received on June 10, 2009 intact with a cooler temperature of 1.2°C.

All samples were analyzed for Aroclor Analytes according to CLP SOW SOM01.2 and reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 Validation and customization requests.

No sample was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

No samples were identified as field blanks or field duplicates.

**1. HOLDING TIME**

No problems found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No problems found.

**3. CALIBRATION**

No problems found.

**4. BLANKS**

No problems found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

No problems found.

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

No sample was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

**6B. LABORATORY CONTROL SAMPLE**

No problems found.

**7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as field blanks or field duplicates.

Results are not qualified based upon the results of the field duplicates.

**8. INTERNAL STANDARDS**

Not applicable to Aroclor analysis.

**9. COMPOUND IDENTIFICATION**

After reviewing the chromatograms it appears that all aroclor compounds were properly identified.

## **10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

The following Aroclors samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

ALCS46, ALCS51  
Aroclor-1016, Arclor-1260

## **11. SYSTEM PERFORMANCE**

The GC baselines for the Aroclor analyses were acceptable.

## **12. ADDITIONAL INFORMATION**

The CADRE and EDD spreadsheets did not include the following samples. The laboratory Form I's for these samples are included with the hard copy data package.

ALCS46, ALCS51

Sample E3ZR6 was received with a cooler temperature of 1.1°C and sample E3ZR7 was received with a cooler temperature of 1.2°C. Both were outside the EPA stated range of  $4 \pm 2^\circ\text{C}$ . There is no Regional guidance for this out of control condition; the end user needs to determine what affect it will have on the final data usage.

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: July 14, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (15080102), WI

Case Number: 38637 SDG Number: E3ZS2

Number and Type of Samples: 2 waters (Aroclors)

Sample Numbers: E3ZS1, E3ZS2

Laboratory: KAP Laboratories Hrs for Review: \_\_\_\_\_

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38637  
Site Name: Kinnickinnic River (WI)

Page 2 of 5  
SDG Number: E3ZS2  
Laboratory: KAP Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Two (2) water samples labeled E3ZS1 and E3ZS2 were collected 06-18-09 and 06-22-09. The samples were received intact by KAP Technologies, Inc. located in The Woodlands, TX on 06-19-09 and 06-23-09. Sample E3ZS1 arrived intact and at the proper shipping temperature range of 2 - 6°C. The temperature of the cooler containing sample E3ZS2 was 1.0°C upon receipt. Although the cooler containing sample E3ZS2 was outside the required temperature range, no sample results are qualified for this deficiency.

All samples were analyzed for the aroclor target compounds according to CLP SOW SOM01.2. The samples were reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 Validation SOP and customization request.

Sample E3ZS2 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No samples were identified as field blanks or field duplicates.

**1. HOLDING TIME**

No problems were found.

**2. GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

No problems were found.

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

No problems were found.

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3ZS2 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No problems were found.

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as field blanks or field duplicates.

**8. INTERNAL STANDARDS**

Not applicable to this analysis.

**9. COMPOUND IDENTIFICATION**

After reviewing the chromatograms it appears that the aroclor compounds were properly identified.

## **10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

The following aroclor samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

ALCS67  
Aroclor-1016, Aroclor-1260

## **11. SYSTEM PERFORMANCE**

The GC baselines for the aroclor analyses were acceptable.

## **12. ADDITIONAL INFORMATION**

The following aroclor samples were reported in the EDD spreadsheet but not report in the CADRE spreadsheet. The laboratory Form Is for these samples are included with the hard copy data package.

ALCS61, ALCS67

The samples were analyzed according to CLP SOW SOM01.2. The sample results were reported on forms from SOW SOM01.2 (06/2007). All QC results were reported on forms from SOW SOM01.1 (05/2005). The sample results are not qualified for this non-compliance.

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: July 14, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (15080102), WI

Case Number: 38637 SDG Number: E3ZS4

Number and Type of Samples: 2 waters (Aroclors)

Sample Numbers: E3ZS3, E3ZS4

Laboratory: KAP Laboratories Hrs for Review: \_\_\_\_\_

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38637  
Site Name: Kinnickinnic River (WI)

Page 2 of 5  
SDG Number: E3ZS4  
Laboratory: KAP Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Two (2) water samples labeled E3ZS3 and E3ZS4 were collected 06-25-09 and 06-29-09. The samples were received by KAP Technologies, Inc. located in The Woodlands, TX on 06-26-09 and 06-30-09. All samples arrived intact and at the proper shipping temperature range of 2 - 6°C.

All samples were analyzed for the aroclor target compounds according to CLP SOW SOM01.2. The samples were reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 Validation SOP and customization requests.

Sample E3ZS4 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No samples were identified as field blanks or field duplicates.

**1. HOLDING TIME**

No problems were found.

**2. GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

The following aroclor samples are associated with an opening CCV with % Difference exceeding criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

ABLK74, ALCS74, E3ZS4, E3ZS4MS, E3ZS4MSD  
Aroclor-1260

ABLK75, ALCS75, E3ZS3  
Aroclor-1016, Aroclor-1260

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

No problems were found.

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3ZS4 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No problems were found.

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as field blanks or field duplicates.

Case Number: 38637  
Site Name: Kinnickinnic River (WI)

Page 4 of 5  
SDG Number: E3ZS4  
Laboratory: KAP Laboratories

## **8. INTERNAL STANDARDS**

Not applicable to this analysis.

## **9. COMPOUND IDENTIFICATION**

After reviewing the chromatograms it appears that the aroclor compounds were properly identified.

## **10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

The following aroclor samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

ALCS74  
Aroclor-1016

ALCS75  
Aroclor-1016, Aroclor-1260

## **11. SYSTEM PERFORMANCE**

The GC baselines for the aroclor analyses were acceptable.

## **12. ADDITIONAL INFORMATION**

The following aroclor samples were reported in the EDD spreadsheet but not report in the CADRE spreadsheet. The laboratory Form Is for these samples are included with the hard copy data package.

ALCS74, ALCS75

The samples were analyzed according to CLP SOW SOM01.2. The sample results were reported on forms from SOW SOM01.2 (06/2007). All QC results were reported on forms from SOW SOM01.1 (05/2005). The sample results are not qualified for this non-compliant.

Laboratory: KAP Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Three (3) water samples labeled E3ZS5, E3ZS6, and E3ZS9 were collected 07-02-09 and 07-06-09. The samples were received by KAP Technologies, Inc. located in The Woodlands, TX on 07-03-09 and 07-07-09. All samples arrived intact and at the proper shipping temperature range of 2 - 6°C. All samples were analyzed for the aroclor target compounds according to CLP SOW SOM01.2. The samples were reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 Validation and customization requests.

Sample E3ZS5 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No samples were identified as field blanks. Sample E3ZS9 was identified as field duplicate of sample E3ZS6.

**1. HOLDING TIME**

No problems were found.

**2. GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

No problems were found.

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

No problems were found.

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3ZS5 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No problems were found.

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as field blanks. Sample E3ZS9 was identified as field duplicate of sample E3ZS6. No Aroclor was detected in the field duplicate samples.

**8. INTERNAL STANDARDS**

Not applicable to this analysis.

**9. COMPOUND IDENTIFICATION**

After reviewing the chromatograms it appears that the aroclor compounds were properly identified.

## **10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

The following aroclor samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

ALCS78, ALCS79  
Aroclor-1016

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified "J".

ALCS78  
Aroclor-1016

## **11. SYSTEM PERFORMANCE**

The GC baselines for the aroclor analyses were acceptable.

## **12. ADDITIONAL INFORMATION**

The following aroclor samples were reported in the EDD spreadsheet but not reported in the CADRE spreadsheet. The laboratory Form Is for these samples are included with the hard copy data package.

ALCS78, ALCS79

The samples were analyzed according to CLP SOW SOM01.2. The sample results were reported on forms from SOW SOM01.2 (06/2007). All QC results were reported on forms from SOW SOM01.1 (05/2005). The sample results are not qualified for this non-compliant.

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

SITE Name: KinnicKinnic River (WI)

Case Number: 38637 SDG Number: E3ZS0

Number and Type of Samples: 2 water Samples (Aroclors only)

Sample Numbers: E3ZR8, E3ZS0

Laboratory: KAP Technologies, Inc. Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38637  
Site Name: KinnicKinnic River (WI)

Page 2 of 5  
SDG Number: E3ZS0  
Laboratory: KAP Technologies Inc

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Two (2) water samples labeled E3ZR8 and E3ZS0, were shipped to KAP Technologies, Inc located in The Woodlands, Texas. Sample E3ZS0 was collected on June 11, 2009 and received on June 12, 2009 intact with a cooler temperature of 1.0°C. Sample E3ZR8 was collected on June 15, 2009 and received on June 16, 2009 intact with a cooler temperature of 1.2°C.

All samples were analyzed for Aroclor analytes according to CLP SOW SOM01.2 and reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 Validation and customization requests.

Sample E3ZS0 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

No samples were identified as field blanks or field duplicates.

**1. HOLDING TIME**

No problems found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No problems found.

**3. CALIBRATION**

No problems found.

**4. BLANKS**

No problems found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

No problems found.

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3ZS0 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

No problems found.

**6B. LABORATORY CONTROL SAMPLE**

No problems found.

**7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as field blanks or field duplicates.

Results are not qualified based upon the results of the field duplicates.

**8. INTERNAL STANDARDS**

Not applicable to Arclor analysis

**9. COMPOUND IDENTIFICATION**

After reviewing the chromatograms it appears that all aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following Aroclors samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

ALCS51  
Aroclor-1016, Arclor-1260

## 11. SYSTEM PERFORMANCE

The GC baselines for the Aroclor analyses were acceptable.

## 12. ADDITIONAL INFORMATION

The CADRE and EDD spreadsheets did not include the following samples. The laboratory Form I's for these samples are included with the hard copy data package.

ALCS51, ALCS58

Sample E3ZS0, was received with a cooler temperature of 1.0°C and sample E3ZR8, was received with a cooler temperature of 1.2°C. Both were outside the EPA stated range of  $4 \pm 2^\circ\text{C}$ . There is no Regional guidance for this out of control condition; the end user needs to determine what affect it will have on the final data usage.

The FORM I submitted by the laboratory for ABLK58 listed Aroclor-1016 present at 0.19 µg/L, but upon reviewing the raw data, it was determined to be a false positive as there were no peaks of pattern match in the chromatograph.

SUBJECT: Review of Data  
Received for Review on: September 2, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (15080102), WI

Case Number: 38701 SDG Number: E3MZ9

Number and Type of Samples: 20 soil samples (SVOA, SVOA SIM, Aroclors)

Sample Numbers: E3MZ9, E3N00 – E3N02, E3ZT7 – E3ZT9, E3ZW0 – E3ZW2, E3ZW4 –  
E3ZW9, E3ZX0 – E3ZX3

Laboratory: Mitkem Laboratories Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3MZ9, E3N00 – E3N02, E3ZT7 – E3ZT9, E3ZW0 – E3ZW2, E3ZW4 – E3ZW9 and E3ZX0 – E3ZX3 were collected on 08-11-09. The samples were received by Mitkem Laboratories located in Warwick, RI on 08-12-09. All samples arrived intact and at the proper shipping temperature range of 2 - 6°C. All samples were analyzed according to CLP SOW SOM01.2 (6/2007) with modifications listed in the Modification Reference Number 1760.0, Title PAH only letter which is included with the data package. The samples were reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 SOP for Data Validation and the GLNPO request.

All twenty (20) samples were analyzed for PAHs (Polycyclic Aromatic Hydrocarbons) using SVOA full scan and the aroclor compounds. Sixteen (16) samples have either a PAH compound reported as non-detected or with a “J” flag in the undiluted SVOA samples and were analyzed for SVOA SIM. The sample analyses are summarized in the following table:

EPA sample ID	SVOA full scan	SVOA SIM	Aroclor
E3MZ9	X	X	X
E3MZ9DL		X	
E3MZ9MS	X	X	X
E3MZ9MSD	X	X	X
E3N00	X	X	X

The SVOA and SVOA SIM samples were analyzed for the following PAH analytes:

Naphthalene	2-Methylnaphthalene	Acenaphthylene
Acenaphthene	Fluorene	Phenanthrene
Anthracene	Fluoranthene	Pyrene
Benzo(a)anthracene	Chrysene	Benzo(b)fluoranthene
Benzo(k)fluoranthene	Benzo(a)pyrene	Indeno(1,2,3-cd)pyrene
Dibenzo(a,h)anthracene	Benzo(g,h,i)perylene	

Sample E3MZ9 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

Samples E3N00/E3N01 and E3ZW6/E3ZW7 are field duplicate pairs. No samples are identified as field blanks.

**1. HOLDING TIME**

No problems were found.

**2. GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

Calibration curves of 5.0, 10, 20, 40, 80 ng/ul for SVOA and 0.1, 0.2, 0.4, 0.8, 1.0 ng/ul for SVOA SIM as required by the SOW SOM01.2 were used to quantitate the PAH results.

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected Fluorene in samples E3ZT7, E3ZT7DL, E3ZT8, E3ZT8DL, E3ZW0, E3ZW0DL, E3ZW1, E3ZW2, E3ZW4, E3ZW4DL, E3ZW5, E3ZW5DL, E3ZW7, E3ZX2, E3ZX2DL and E3ZX3 is qualified "J". Non-detected compounds are not qualified.

E3N00, E3N01, E3N02, E3ZT7, E3ZT7DL, E3ZT8, E3ZT8DL, E3ZT9, E3ZW0, E3ZW0DL, E3ZW1, E3ZW2, E3ZW4, E3ZW4DL, E3ZW5, E3ZW5DL, E3ZW7, E3ZW8, E3ZX2, E3ZX2DL, E3ZX3, SBLK2X  
Fluorene

The following semivolatile samples are associated with an opening CCV percent difference (%D) outside criteria. Detected Fluoranthene is qualified "J".

E3ZT7DL, E3ZT8DL, E3ZW0DL, E3ZW4DL, E3ZW5DL, E3ZX2DL  
Fluoranthene

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3ZW4DL  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3MZ9  
Laboratory: Mitkem Laboratories

The following diluted semivolatile samples with dilution factors greater than 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non-detected compounds are not qualified.

E3ZW9DL, E3ZX0DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene, Anthracene

The following diluted semivolatile SIM samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J".

E3ZW7  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted semivolatile SIM samples with dilution factors greater than 5 have deuterated monitoring compound recoveries below the lower limit of the criteria window. Detected and non-detected compounds are not qualified.

E3MZ9DL, E3N00DL, E3N01DL, E3ZT7, E3ZT8, E3ZW1, E3ZW2DL, E3ZW4DL, E3ZW5, E3ZW6DL, E3ZW7DL, E3ZX2, E3ZX3DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries that are greater than 200%. Detected and non-detected compounds are not qualified.

E3ZT7DL

The following aroclor samples have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3ZW9, E3ZX0

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200%. Detected and non-detected compounds are not qualified.

E3ZT7DL, E3ZW4DL

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3MZ9  
Laboratory: Mitkem Laboratories

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3ZT7

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3MZ9 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

The relative percent difference (RPD) between the following semivolatile SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected Pyrene in the unspiked samples (E3MZ9 and E3MZ9DL) is qualified "J".

E3MZ9MS, E3MZ9MSD  
Pyrene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected Acenaphthene and Pyrene in the unspiked samples (E3MZ9 and E3MZ9DL) are qualified "J".

E3MZ9MS, E3MZ9MSD  
Acenaphthene, Pyrene

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Aroclor-1016 was not detected in the unspiked sample. Non-detected Aroclor-1016 in the unspiked sample (E3MZ9) is qualified "UJ".

E3MZ9MS, E3MZ9MSD  
Aroclor-1016

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria on only 1 GC column. Non-detected Aroclor-1016 is not qualified on this basis as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range but qualified "UJ" because of non-compliance RPD.

E3MZ9MSD  
Aroclor-1016

#### **6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

Samples E3N00/E3N01 and E3ZW6/E3ZW7 are field duplicate pairs. No samples are identified as filed blanks. The results for duplicate pair E3N00/E3N01 are summarized in the following tables:

<b>SVOA full scan results</b>			
	E3N00	E3N01	
Analytes	DF= 1.0	DF=1.0	RPDs
Phenanthrene	220 J	220 J	0
Anthracene	50 J	280 U	200

Sample results are not qualified based on the results of field duplicate samples.

## 8. INTERNAL STANDARDS

The following semivolatile SIM samples have internal standard area counts that are outside the upper limit of primary criteria. Detected Acenaphthene and Fluorene are qualified "J". Non-detected Acenaphthylene is not qualified.

E3N00  
Acenaphthylene, Acenaphthene, Fluorene

## 9. COMPOUND IDENTIFICATION

After reviewing the chromatograms it appears that the semivolatile, semivolatile SIM and aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

E3MZ9  
Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene,  
Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3MZ9MS  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Fluorene, Anthracene,  
Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene

E3MZ9MSD  
2-Methylnaphthalene, Acenaphthylene, Dibenzo(a,h)anthracene

E3N00  
Phenanthrene, Anthracene, Benzo(a)anthracene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3N01  
Phenanthrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

E3ZX3  
Acenaphthene, Fluorene, Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene,  
Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene

The following semivolatile SIM sample has compound concentrations less than the CRQL.  
Detected compound is qualified "J".

E3ZW4DL  
Acenaphthylene

The following aroclor samples have compound concentrations less than the CRQL. Detected  
compounds are qualified "J".

E3MZ9, E3N00, E3ZX0  
Aroclor-1248

E3ZT7DL, E3ZT8, E3ZW4DL  
Aroclor-1260

The following aroclor samples have percent differences between analyte results in the range of  
26-50%. Detected compounds are qualified "J".

E3ZX0  
Aroclor-1248

E3MZ9MS, E3MZ9MSD  
Aroclor-1016

The following aroclor samples have percent differences between analyte results in the range of  
51-100%. Detected compounds are qualified "J".

E3ZT8, E3ZW4DL  
Aroclor-1254

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baselines for the aroclor analyses  
were acceptable.

## 12. ADDITIONAL INFORMATION

The following aroclor sample was reported in the EDD spreadsheet but not report in the CADRE spreadsheet. The laboratory Form Is for this sample is included with the hard copy data package.

### ALCS5Q

The following semivolatile samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

#### E3ZT7, E3ZW9, E3ZX0, E3ZX1

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

#### E3ZT8, E3ZW5, E3ZX2

Phenanthrene, Fluoranthene, Pyrene

#### E3ZW0

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene

#### E3ZW4

Fluoranthene, Pyrene

The following samples were reanalyzed at the SIM level of detection because they reported the associated compounds as non-detects (U) from the semivolatile analyses (full scan). The values obtained from the SIM analyses should be considered the final concentrations for the affected compounds.

#### E3MZ9, E3ZW2, E3ZW7, E3ZX2DL

Acenaphthylene

#### E3N00

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Dibenzo(a,h)anthracene

#### E3N01

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Anthracene, Dibenzo(a,h)anthracene

#### E3N02, E3ZT9, E3ZW8

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,

Case Number: 38701

Laboratory: Mitkem Laboratories

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3ZT7DL (df = 10.0), E3ZT8DL (df = 4.0), E3ZW4DL (df = 4.0),  
E3ZW5DL (df = 4.0)  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene

E3ZW4  
Naphthalene

E3ZW9DL (df = 8.0), E3ZX0DL (df = 8.0)  
2-Methylnaphthalene, Acenaphthylene

E3ZX3  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Anthracene,  
Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

The following samples were reanalyzed at the SIM level of detection because they reported one or more compounds below the CRQL (J) from the semivolatile analyses (full scan).

E3MZ9, E3MZ9MS, E3MZ9MSD, E3N00, E3N01, E3ZT7, E3ZT7DL, E3ZT8,  
E3ZT8DL, E3ZW0DL, E3ZW1, E3ZW2, E3ZW4, E3ZW4DL, E3ZW5, E3ZW5DL,  
E3ZW6, E3ZW7, E3ZW9DL, E3ZX0DL, E3ZX1DL, E3ZX2, E3ZX2DL, E3ZX3

The following semivolatile SIM samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The samples were re-analyzed at 8-fold dilution but the compounds were not detected. Therefore, the results (detected above the laboratory MDL but below the CRQL) from the semivolatile analyses (full scan) should be considered the final concentrations for the affected compounds.

E3N00, E3ZW2  
Benzo(g,h,i)perylene

E3ZX3  
Benzo(a)pyrene

The following semivolatile SIM samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the semivolatile analyses (full scan) should be considered the final concentrations for the affected compounds.

Laboratory: Mitkem Laboratories

The following semivolatile SIM samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". No dilution was required because these are laboratory QC samples.

E3MZ9MS, E3MZ9MSD  
Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene,  
Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following aroclor samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E3ZT7, E3ZW4  
Aroclor-1248, Aroclor-1254

The following aroclor samples have compound concentrations whose presence were confirmed by GC/MS and are qualified with "C".

E3ZT7, E3ZT7DL  
Aroclor-1248, Aroclor-1254

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

Received for Review on: 08 September 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

SITE Name Kinnickinnic River (WI)

Case Number: 38701 MRN: 1760.0 SDG Number: E3N10

Number and Type of Samples: 20 Soil Samples (SVOA, SVOA-SIM, AROCLOR)

Sample Numbers: E3N10-E3N26, E3N34-E3N35, and E3N43

Laboratory: Mitkem Laboratories

Hrs for Review: 32

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 2 of 16  
SDG Number: E3N10  
Laboratory: Mitkem

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Number (20) soil samples labeled E3N10-E3N26, E3N34-E3N35, and E3N43 were shipped to Mitkem Laboratory in Warwick, RI. Nineteen (19) samples; E3N10-E3N26, and E3N34-E3N35 were collected on 08/12/2009 and received on 08/13/2009 intact and properly cooled. One (1) sample; E3N43 was collected on 08/13/09 and received on 08/14/2009 intact and properly cooled.

Eighteen (18) samples were analyzed for the SVOA, SVOA-SIM and Aroclor lists of compounds. Two (2) samples; E3N22 and E3N23 were analyzed for only the SVOA and Aroclor lists of compounds. All samples were analyzed according to CLP SOW SOM01.2 6/2007 and reviewed according to the NFG for SOM01.2, MRN 1760.0 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3).

Sample E3N43 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses.

Samples E3N11 / E3N12 and E3N21 / E3N22 were identified as field duplicates.

**1. HOLDING TIME**

No Problems Found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No Problems Found.

**3. CALIBRATION**

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified unless qualified otherwise for non-compliance with another criterion.

E3N10, E3N10DL, E3N11, E3N11DL, E3N12, E3N12DL, E3N13, E3N14, E3N14DL, E3N15, E3N15DL, E3N16, E3N16DL, E3N17, E3N17DL, E3N18, E3N19, E3N19DL, E3N20, E3N20DL, E3N21, E3N21DL, E3N24, E3N24DL, E3N25, E3N26, E3N26DL, E3N34, E3N34DL, E3N35, E3N35RE, E3N43, E3N43DL, E3N43MS, E3N43MSD, SBLK2D, SBLK2G  
Fluorene

**4. BLANKS**

No Problems Found

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified unless qualified otherwise for non-compliance with another criterion.

E3N10  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

E3N13  
Fluorene

E3N15, E3N18, E3N43MS  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3N17  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N10  
Laboratory: Mitkem

E3N43MSD

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified unless qualified otherwise for non-compliance with another criterion.

E3N17DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

The following diluted semivolatile samples with dilution factors greater than 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non-detected compounds are not qualified.

E3N10DL, E3N11DL, E3N12DL, E3N20DL

Phenanthrene, Anthracene

E3N14DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene, Anthracene

The following diluted semivolatile samples with dilution factors greater than 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected and non-detected compounds are not qualified.

E3N11DL, E3N21DL

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3N21

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted semivolatile SIM samples with dilution factors greater than 5 have deuterated monitoring compound recoveries less than or equal to 0%. Detected and non-detected compounds are not qualified.

E3N10, E3N11, E3N12, E3N14, E3N15DL, E3N16, E3N17DL, E3N19, E3N20, E3N21, E3N24, E3N26, E3N34, E3N35DL, E3N43, E3N43MS, E3N43MSD

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 5 of 16  
SDG Number: E3N10  
Laboratory: Mitkem

The following Aroclor samples have surrogate recoveries that are greater than the upper limit on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N10, E3N11, E3N12, E3N14, E3N16, E3N17, E3N19, E3N20, E3N21, E3N22,  
E3N23, E3N24, E3N34, E3N43, E3N43MS, E3N43MSD

The following diluted aroclor samples with dilution factors greater than 5 have surrogate recoveries that are greater than the upper limit on only 1 GC column. Detected and non-detected compounds are not qualified.

E3N26DL, E3N43DL

The following diluted aroclor samples with dilution factors less than 5 have surrogate recoveries that are greater than the upper limit on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N26, E3N34DL

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3N43 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked samples (E3N43 and E3N43DL) are qualified "J".

E3N43MS, E3N43MSD  
Pyrene

The relative percent difference (RPD) between the following semivolatile SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3N43) are qualified "J".

E3N43MS, E3N43MSD  
Acenaphthene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked (E3N43) are qualified "J".

Case Number: 38701  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3N10  
 Laboratory: Mitkem

E3N43MS, E3N43MSD  
 Pyrene

The aroclor Form III –MS/MSD Summary was re-calculated using the lowest obtained value for each compound. The RPDs were re-calculated using these values.

E3N43	MS% REC	MSD%REC	RPDs	RPD QC	REC QC
Analytes	µg/kg	µg/kg			
Aroclor-1016	266*	244*	8.6	0-15	29-135
Aroclor-1260	72	45	46.2*	0-20	29-135

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3N43 and E3N43DL) are qualified “J”. Non-detected compounds are not qualified.

E3N43MS / E3N43MSD  
 Aroclor-1260

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. The compound was not detected in the unspiked samples (E3N43 and E3N43DL). Non-detected compounds are not qualified.

E3N43MS / E3N43MSD  
 Aroclor-1016

## 6B. LABORATORY CONTROL SAMPLE

No Problems Found.

## 7. FIELD BLANK AND FIELD DUPLICATE

Samples E3N11 / E3N12 and E3N21 / E3N22 were identified as a field duplicates. No SIM analyses was performed on sample E3N22. Neither sample reported any aroclor compounds. Results are summarized in the following table:

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N10  
Laboratory: Mitkem

	E3N11	E3N12	%RPDs	E3N11DL	E3N12DL	%RPDs

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified unless qualified otherwise for non-compliance with another criterion.

E3N14, E3N34

Phenanthrene, Anthracene, Fluoranthene

E3N16

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3N22

Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N23, E3N35

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 9 of 16  
SDG Number: E3N10  
Laboratory: Mitkem

E3N35RE

Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following semivolatile samples have internal standard area counts that are outside the lower limit of primary criteria and greater than 20% of the associated 12 hour standard. Detected compounds are qualified "J".

E3N43

Naphthalene, 2-Methylnaphthalene

E3N43MS, E3N43MSD

Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SV, SV-SIM and Aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E3N10, E3N11, E3N12, E3N14, E3N16, E3N19, E3N20, E3N21, E3N34

Acenaphthylene

E3N10DL

Naphthalene, Fluorene, Anthracene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N11DL

Acenaphthene, Fluorene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3N12DL

Fluorene, Anthracene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3N14DL

Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

Case Number: 38701

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the aroclor analyses were acceptable.

## 12. ADDITIONAL INFORMATION

The CADRE spreadsheets did not include the following Aroclor samples. Form Is for these samples are included with the hard copy data package.

ALCS3G, ALCS5Q

The following SVOA samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

E3N10, E3N19, E3N26

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3N11, E3N34

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3N12, E3N20, E3N43

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

E3N14

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

E3N15

Pyrene

E3N16, E3N24

Phenanthrene, Fluoranthene, Pyrene

E3N17

Fluoranthene

E3N21, E3N22

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene

E3N23

Phenanthrene, Fluoranthene, Pyrene, Benzo(b)fluoranthene

Case Number: 38701  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3N10  
 Laboratory: Mitkem

The following semivolatile samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

E3N43MS, E3N43MSD

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
 Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

The following semivolatile samples have raw data that does not match the Form I's. All samples were recalculated and the Form I's are determined to be correct results. The raw data calculations do not account for the percent moisture. No sample results were qualified for this discrepancy.

E3N43, E3N43DL, E3N43MS, E3N43MSD

The following semivolatile SIM samples have reported concentrations that exceed the instrument's linear calibration range in the original and diluted analysis. The results are flagged "E" by the laboratory and are estimated "J". The results with qualification from the diluted samples should be used for result validation.

E3N15

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene,  
 Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
 Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N15DL

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
 Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3N17

2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene,  
 Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
 Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N17DL

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
 Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

The following semivolatile SIM samples have reported concentrations that exceed the instrument's linear calibration range. The results are flagged "E" by the laboratory and are estimated "J". The following samples were only analyzed once (at a dilution) for SVOA SIM analysis.

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N10  
Laboratory: Mitkem

## E3N10

Naphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

## E3N11, E3N14, E3N16, E3N34

Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

## E3N12, E3N20, E3N21, E3N26

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

## E3N19

2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

## E3N24

Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

## E3N43

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following semivolatile SIM samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

## E3N35

Phenanthrene, Fluoranthene, Pyrene

The following semivolatile SIM samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

## E3N43MS, E3N43MSD

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N10  
Laboratory: Mitkem

The following semivolatile SIM samples have raw data that does not match the Form I's. All samples were recalculated and the Form I's are determined to be correct results. The raw data calculations do not account for the percent moisture. No sample results were qualified for this discrepancy.

E3N43

The following Aroclor samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

E3N26  
Aroclor-1242, Aroclor-1248

E3N34  
Aroclor-1242

E3N43  
Aroclor-1248, Aroclor-1254, Aroclor-1260

The following aroclor samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

E3N43MS, E3N43MSD  
Aroclor-1248, Aroclor-1254

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: September 4, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (15080102), WI

Case Number: 38701 SDG Number: E3N42

Number and Type of Samples: 20 soil samples (SVOA, SVOA SIM, Aroclors)

Sample Numbers: E3N42, E3N44 – E3N53, E3N67 – E3N71, E3N85 – E3N88

Laboratory: Mitkem Laboratories Hrs for Review: \_\_\_\_\_

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38701

SDG Number: E3N42

Site Name: Kinnickinnic River (WI)

Laboratory: Mitkem Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3N42, E3N44 – E3N53, E3N67 – E3N71, and E3N85 – E3N88 were collected on 08-13-09. The samples were received by Mitkem Laboratories located in Warwick, RI on 08-14-09. All samples arrived intact and at the proper shipping temperature range of 2 - 6°C. All samples were analyzed according to CLP SOW SOM01.2 (6/2007) with modifications listed in the Modification Reference Number 1760.0, Title PAH only letter which is included with the data package. The samples were reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 SOP for Data Validation and the GLNPO request.

All twenty (20) samples were analyzed for PAHs (Polycyclic Aromatic Hydrocarbons) using SVOA full scan and the aroclor compounds. Seventeen (17) samples which have either a PAH compound reported as non-detected or with a “J” flag in the initial SVOA analyses were analyzed for the SVOA SIM scan. The sample analyses are summarized in the following table:

The SVOA and SVOA SIM samples were analyzed for the following PAH analytes:

Naphthalene	2-Methylnaphthalene	Acenaphthylene
Acenaphthene	Fluorene	Phenanthrene
Anthracene	Fluoranthene	Pyrene
Benzo(a)anthracene	Chrysene	Benzo(b)fluoranthene
Benzo(k)fluoranthene	Benzo(a)pyrene	Indeno(1,2,3-cd)pyrene
Dibenzo(a,h)anthracene	Benzo(g,h,i)perylene	

Sample E3N88 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses. Sample E3N88 was used as the MS / MSD for the SVOA and Aroclor fractions. Sample E3N48 was used as the MS /MSD for the SVOA SIM fraction.

Samples E3N44/E3N45, E3N52/E3N53 and E3N85/E3N86 are field duplicate pairs. No samples are identified as field blanks.

## 1. HOLDING TIME

The following SVOA SIM soil samples are outside primary extraction holding time criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3N48MS, E3N48MSD

## 2. GC INSTRUMENT PERFORMANCE

The following SVOA samples have an instrument performance check with ion abundance outside criteria. Detected and non-detected compounds are not qualified.

SBLK4Y

## 3. CALIBRATION

Calibration curves of 5.0, 10, 20, 40, 80 ng/ul for SVOA and 0.1, 0.2, 0.4, 0.8, 1.0 ng/ul for SVOA SIM as required by the SOW SOM01.2 were used to quantitate the PAH results.

The following SVOA samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Non-detected Fluorene in samples E3N48 and SBLK2F is not qualified. Detected Fluorene in the remaining samples is qualified "J".

E3N42DL, E3N44DL, E3N45DL, E3N46DL, E3N47DL, E3N48, E3N49DL,  
E3N50DL, E3N51DL, E3N52DL, E3N53DL, E3N71, E3N85DL, E3N86DL,  
E3N87DL, E3N88DL, SBLK2F  
Fluorene

The following SVOA samples are associated with a continuing calibration in which a surrogate/DMC exceeded percent difference (%D) criteria. Detected and non-detected compounds are not qualified.

E3N71  
Pyrene-d<sub>10</sub>

The following SVOA samples are associated with an opening CCV percent difference (%D) outside criteria. Non-detected Benzo(g,h,i)perylene in sample E3N48 is qualified "UJ". Detected Benzo(k)fluoranthene and Benzo(g,h,i)perylene in the remaining samples are qualified "J".

Benzo(k)fluoranthene  
E3N42, E3N44, E3N45, E3N46, E3N47, E3N49, E3N50, E3N51, E3N52, E3N53,  
E3N85, E3N86, E3N87, E3N88, E3N88MS, E3N88MSD

Benzo(g,h,i)perylene  
E3N42DL, E3N44DL, E3N45DL, E3N46DL, E3N47DL, E3N48, E3N49DL,  
E3N50DL, E3N51DL, E3N52DL, E3N53DL, E3N85DL, E3N86DL, E3N87DL,  
E3N88DL

#### 4. BLANKS

No problems were found.

#### 5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following diluted SVOA samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J".

E3N42  
Phenanthrene, Anthracene

The following SVOA samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J".

E3N47, E3N86  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3N85  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted SVOA samples with dilution factors greater than 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non-detected compounds are not qualified.

E3N69DL, E3N70DL  
Phenanthrene, Anthracene

E3N42DL  
Phenanthrene, Anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

The following diluted SVOA samples with dilution factors greater than 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected and non-detected compounds are not qualified.

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 6 of 21  
SDG Number: E3N42  
Laboratory: Mitkem Laboratories

E3N44DL, E3N45DL, E3N85DL  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following diluted SVOA SIM samples with dilution factors greater than 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected and non-detected compounds are not qualified.

E3N42, E3N44, E3N45, E3N46, E3N47, E3N49, E3N50, E3N51, E3N52, E3N53, E3N68DL, E3N69, E3N70, E3N71, E3N85, E3N86  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries that are greater than 200%. Detected and non-detected compounds are not qualified.

E3N42DL, E3N69DL, E3N70DL, E3N86DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N42, E3N69

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200%. Detected and non-detected compounds are not qualified.

E3N71DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N44DL, E3N45DL

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3N88 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses. Sample E3N88 was used as the MS / MSD for the SVOA and Aroclor fractions. Sample E3N48 was used as the MS /MSD for the SVOA SIM fraction.

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N42  
Laboratory: Mitkem Laboratories

The following SVOA matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected Pyrene in the unspiked samples (E3N88 and E3N88DL) is qualified "J".

E3N88MS, E3N88MSD  
Pyrene

The relative percent difference (RPD) between the following SVOA SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Non-detected Acenaphthene in the unspiked sample (E3N48) is qualified "UJ".

E3N48MS, E3N48MSD  
Acenaphthene

The following SVOA SIM matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected Pyrene in the unspiked sample (E3N48) is qualified "J".

E3N48MS, E3N48MSD  
Pyrene

#### **6B. LABORATORY CONTROL SAMPLE**

No problems were found.

#### **7. FIELD BLANK AND FIELD DUPLICATE**

Samples E3N44/E3N45, E3N52/E3N53 and E3N85/E3N86 are a field duplicate pairs. No samples are identified as field blanks.

The results for the duplicate samples E3N44 and E3N45 are summarized in the following tables:

Case Number: 38701

SDG Number: E3N42

Site Name: Kinnickinnic River (WI)

Laboratory: Mitkem Laboratories

## 8. INTERNAL STANDARDS

The following SVOA samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J".

E3N42

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N67

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N69

Napthalene, 2-Methylnapthalene, Acenaphthylene, Acenaphthene, Fluorene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N70

Napthalene, 2-Methylnapthalene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following SVOA samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified "J".

E3N51

Napthalene, 2-Methylnapthalene, Acenaphthylene, Acenaphthene, Fluorene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N52, E3N53

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N85

Napthalene, 2-Methylnapthalene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following SVOA SIM samples have internal standard area counts that are outside the upper limit of primary criteria. Detected Phenanthrene, Fluoranthene and Benzo(b)fluoranthene in sample E3N48 are qualified "J". Non-detected compounds are not qualified. Non-detected Acenaphthene in sample E3N48 is qualified as "UJ" because of non-compliance RPD in the MS/MSD.

E3N48

Napthalene, 2-Methylnapthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N48RE

Acenaphthylene, Acenaphthene, Fluorene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## 9. COMPOUND IDENTIFICATION

After reviewing the chromatograms it appears that the SVOA, SVOA SIM and aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

E3N42, E3N69, E3N70  
Naphthalene

E3N42DL, E3N45DL  
Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3N44, E3N45, E3N49  
Naphthalene, Acenaphthylene

E3N44DL, E3N46DL  
Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

E3N46, E3N52, E3N53  
2-Methylnaphthalene, Acenaphthylene

E3N47, E3N86  
Acenaphthylene

E3N47DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene,  
Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3N49DL, E3N50DL, E3N51DL, E3N52DL, E3N53DL, E3N85DL, E3N86DL  
Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N50, E3N51, E3N85  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene

E3N67DL  
Naphthalene, Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 14 of 21

E3N68  
2-Methylnaphthalene, Anthracene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

E3N69DL, E3N71DL  
Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3N70DL  
Acenaphthylene, Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3N71  
Naphthalene, Acenaphthylene, Dibenzo(a,h)anthracene

E3N87DL  
Naphthalene, Acenaphthene, Fluorene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N88DL  
Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3N88MS  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Fluorene,  
Dibenzo(a,h)anthracene

E3N88MSD  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Dibenzo(a,h)anthracene

The following aroclor samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

E3N46  
Aroclor-1254

E3N71DL  
Aroclor-1016

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified "J".

E3N42, E3N69, E3N69DL, E3N86DL  
Aroclor-1260

E3N42DL, E3N70, E3N70DL, E3N71DL, E3N86  
Aroclor-1248

The following aroclor samples have percent differences between analyte results in the range of 51-100%. Detected compounds are qualified "J".

E3N44, E3N45, E3N49, E3N50, E3N51, E3N67, E3N85  
Aroclor-1260

E3N46  
Aroclor-1254

E3N71  
Aroclor-1248, Aroclor-1260

The following aroclor samples have percent differences between analyte results exceeding 100%. Detected compounds are qualified "J".

E3N46, E3N70, E3N86  
Aroclor-1260

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baselines for the aroclor analyses were acceptable.

## 12. ADDITIONAL INFORMATION

The following aroclor sample was reported in the EDD spreadsheet but not reported in the CADRE spreadsheet. The laboratory Form Is for this sample is included with the hard copy data package.

ALCS3B

The following initial SVOA (full scan) analyses have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the most diluted (sample ID with the suffix "DL") SVOA analyses (full scan) should be considered the final concentrations for the affected compounds.

E3N42 (df=4), E3N46, E3N50  
Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene

E3N44  
Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene,  
Benzo(a)pyrene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 16 of 21  
SDG Number: E3N42  
Laboratory: Mitkem Laboratories

E3N45, E3N88  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene

E3N47  
Phenanthrene, Fluoranthene

E3N49, E3N51, E3N52, E3N53, E3N70  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

E3N67  
Phenanthrene, Fluoranthene, Pyrene, Benzo(b)fluoranthene

E3N69  
Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene,  
Benzo(a)pyrene, Benzo(g,h,i)perylene

E3N71  
Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

E3N85, E3N87  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3N86  
Phenanthrene, Fluoranthene, Pyrene

The following SVOA samples were reanalyzed at the SVOA SIM level of detection because they reported the associated compounds as non-detects (U) from the initial SVOA analyses (full scan). The values obtained from the least diluted SVOA SIM analyses should be considered the final concentrations for the affected compounds.

E3N48  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N68  
Acenaphthylene, Dibenzo(a,h)anthracene

The following SVOA samples were reanalyzed at the SVOA SIM level of detection because they reported a compound below the CRQL (J) from the initial SVOA analyses (full scan). The

results from SVOA SIM (df=8 for both samples) exceeded the instrument calibration range and qualified as "J". The laboratory did not dilute the samples further and reanalyze to bring the results into the SVOA SIM calibration range. Therefore, the results from the initial SVOA analyses should be considered the final concentrations for the affected compounds.

E3N42 (df=4)  
Naphthalene

E3N71  
Dibenzo(a,h)anthracene

The following SVOA samples were reanalyzed at the SVOA SIM level of detection because they reported one or more compounds below the CRQL (J) from the initial SVOA analyses (full scan). The results from the least diluted SVOA SIM analysis should be considered the final concentrations for the affected compounds.

E3N44, E3N45, E3N49, E3N71  
Naphthalene, Acenaphthylene

E3N46  
2-Methylnaphthalene, Acenaphthylene

E3N47, E3N86  
Acenaphthylene

Naphthalene, 2-Methylnaphthalene, Acenaphthylene

E3N52, E3N53  
2-Methylnaphthalene, Acenaphthylene

E3N69, E3N70  
Naphthalene

The following SVOA samples were reanalyzed at the SVOA SIM level of detection because they reported one or more compounds below the CRQL (J) from the initial SVOA analyses (full scan). The results from the least diluted SVOA SIM analysis exceeded the instruments calibration range and are qualified as "J". The results from the most diluted SVOA SIM analysis should be considered the final concentrations for the affected compounds.

E3N68  
2-Methylnaphthalene, Anthracene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

The following undiluted (E3N68) and diluted (E3N68DL) SVOA SIM samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the initial SVOA analyses (full scan) should be considered the final concentrations for the affected compounds.

E3N68, E3N68DL  
Phenanthrene, Fluoranthene

The following SVOA SIM samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the initial SVOA analyses (full scan) should be considered the final concentrations for the affected compounds.

E3N42  
2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene, Benzo(a)anthracene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N44  
2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene, Benzo(a)anthracene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N45  
2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N46, E3N50  
Acenaphthene, Fluorene, Anthracene, Benzo(a)anthracene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N47  
Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N49, E3N52, E3N53, E3N70

Aroclor-1248, Aroclor-1254

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

DATE:

SUBJECT: Review of Data  
Received for Review on: September 4, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / CH2M Hill

We have reviewed the data for the following case:

SITE Name: Kinnickinnic River (WI)

Case Number: 38701 MRN: 1760.0 SDG Number: E3N72

Number and Type of Samples: 11 Soils, 2 Waters (PAHs, SIM PAHs, Aroclors)

Sample Numbers: E3N72, E3N73, E3N75 – E3N84, E3N89

Laboratory: Mitkem Laboratories Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 2 of 13  
SDG Number: E3N72  
Laboratory: Mitkem Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Eleven (11) soil samples labeled E3N72, E3N73, E3N75, E3N78 through E3N84, and E3N89; and two (2) water samples labeled E3N76 and E3N77; were shipped to Spectrum Analytical (Mitkem) located in Warwick, RI. All samples were collected on August 13, 2009 and received August 14, 2009 intact and at the proper shipping temperature range of 2 - 6°C.

All samples were analyzed for the Semivolatile, SIM Semivolatile, and Aroclor target compounds according to CLP SOW SOM01.2 (6/2007) with MRN 1760.0 (PAH Only) and reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 Validation SOP and customization request.

No samples were designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses. The laboratory chose sample E3N72 for MS/MSD analysis of the soil fraction. No MS/MSD analysis was performed for the water fraction.

No samples were identified as trip blanks. Water samples E3N76 and E3N77 were identified as equipment blanks.

Soil sample E3N72 was identified as a field duplicate of a sample not included in this SDG.

**1. HOLDING TIME**

No problems were found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

The following soil PAH samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. The detected compound is qualified "J". Non-detected compounds are not qualified.

E3N72, E3N72MS, E3N72MSD, E3N73, E3N75, E3N78, E3N79, E3N80, E3N81,  
E3N82, E3N83, E3N84, E3N89, SBLK2G  
Fluorene

The following water PAH samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. The compound was not detected in the samples. Non-detected compounds are not qualified.

E3N76, E3N77, SBLK2A  
Fluorene

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

The following soil PAH samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3N72MS, E3N72MSD, E3N79, E3N84  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3N73  
Fluorene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3N75, E3N89  
Fluorene

Case Number: 38701  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3N72  
 Laboratory: Mitkem Laboratories

E3N80, E3N81

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3N82

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene

The following diluted soil PAH samples with dilution factors greater than 5.0 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non-detected compounds are not qualified for this criterion.

E3N72DL, E3N73DL, E3N79DL, E3N81DL, E3N83DL, E3N84DL  
 Phenanthrene, Anthracene

E3N80DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted soil SIM PAH samples with dilution factors greater than 5.0 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected and non-detected compounds are not qualified for this criterion.

E3N72, E3N72MS, E3N72MSD, E3N73, E3N78, E3N79, E3N80, E3N81, E3N82DL, E3N83, E3N84, E3N89DL  
 Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following soil Aroclor samples have surrogate recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N72, E3N72MS, E3N72MSD, E3N78, E3N79, E3N80, E3N81  
 Decachlorobiphenyl

The following diluted soil Aroclor samples with dilution factors greater than 5.0 have surrogate percent recoveries that are greater than 200%. Detected and non-detected compounds are not qualified for this criterion.

E3N72DL, E3N83DL, E3N84DL  
 Decachlorobiphenyl

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N72  
Laboratory: Mitkem Laboratories

The following diluted soil Aroclor samples with dilution factors less than or equal to 5.0 have surrogate percent recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N83, E3N84  
Decachlorobiphenyl

The following soil Aroclor sample has surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N73  
Decachlorobiphenyl

The following diluted soil Aroclor sample with a dilution factor less than or equal to 5.0 has surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N78DL  
Decachlorobiphenyl

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

No samples were designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses. The laboratory chose sample E3N72 for MS/MSD analysis of the soil fraction. No MS/MSD analysis was performed for the water fraction.

The relative percent difference (RPD) between the following soil PAH matrix spike and matrix spike duplicate recoveries is outside criteria. The detected compound in the unspiked samples, E3N72 and E3N72DL, is qualified "J".

E3N72MS, E3N72MSD  
Pyrene

The following soil PAH matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. The detected compound in the unspiked samples, E3N72 and E3N72DL, is qualified "J".

E3N72MS, E3N72MSD  
Pyrene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N72  
Laboratory: Mitkem Laboratories

The relative percent difference (RPD) between the following soil SIM PAH matrix spike and matrix spike duplicate recoveries is outside criteria. The detected compound in the unspiked sample, E3N72, is qualified "J".

E3N72MS, E3N72MSD  
Acenaphthene

The following soil SIM PAH matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. The detected compound in the unspiked sample, E3N72, is qualified "J".

E3N72MS, E3N72MSD  
Pyrene

The following soil SIM PAH matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. The detected compound in the unspiked sample, E3N72, is qualified "J".

E3N72MS, E3N72MSD  
Acenaphthene

The following soil Aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. The compound was not detected in the unspiked samples, E3N72 and E3N72DL. The non-detected compound in the unspiked samples is not qualified.

E3N72MS, E3N72MSD  
Aroclor-1016

The following soil Aroclor matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. The detected compound in the unspiked samples, E3N72 and E3N72DL, is qualified "J".

E3N72MS, E3N72MSD  
Aroclor-1260

## **6B. LABORATORY CONTROL SAMPLE**

No problems were found.

## **7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as trip blanks.

Water samples E3N76 and E3N77 were identified as equipment blanks. Results are summarized in the following table:

<b>SIM PAH Compounds</b>	<b>E3N76</b>	<b>E3N77</b>
	<b>µg/L, DF 1</b>	<b>µg/L, DF 1</b>
Phenanthrene	0.25	0.41
Fluoranthene	0.38	0.62
Pyrene	0.36	0.55
Benzo(a)anthracene	0.11	0.20
Chrysene	0.15	0.25
Benzo(b)fluoranthene	0.16	0.28
Benzo(k)fluoranthene	ND	0.11
Benzo(a)pyrene	0.30	0.37
Indeno(1,2,3-cd)pyrene	ND	0.10

Sample E3N72 was identified as a field duplicate of a sample not included in this SDG. Results are not qualified based upon the results of the field duplicates.

## 8. INTERNAL STANDARDS

The following soil PAH samples have internal standard area counts that are outside the upper limit of primary criteria. The detected compounds are qualified "J".

E3N72, E3N73  
Phenanthrene, Anthracene, Fluoranthene

E3N72MS  
Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene

The following soil PAH samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified "J".

E3N72MSD, E3N79, E3N80, E3N81, E3N84  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following soil PAH sample has internal standard area counts that are outside the lower limit of primary criteria. No target compounds are associated with the internal standard; therefore, detected and non-detected compounds are not qualified.

E3N78  
1,4-Dichlorobenzene-d4

## 9. COMPOUND IDENTIFICATION

After reviewing the chromatograms it appears that all PAH, SIM PAH, and Aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following soil PAH samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E3N72DL

Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N72MS, E3N72MSD, E3N73, E3N78, E3N79, E3N80, E3N81

Acenaphthylene

E3N73DL

Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3N78DL

Naphthalene, 2-Methylnaphthelene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N79DL

Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N80DL

Naphthalene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N81DL

Naphthalene, 2-Methylnaphthelene, Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3N82

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3N83

Naphthalene

E3N83DL, E3N84DL

Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N84

Naphthalene, Acenaphthylene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N72  
Laboratory: Mitkem Laboratories

E3N89

Anthracene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

The following soil Aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified "J".

E3N72MS, E3N72MSD

Aroclor-1016

E3N80

Aroclor-1254, Aroclor-1260

E3N89

Aroclor-1254

The following soil Aroclor sample has percent differences between analyte results in the range of 51-100%. Detected compounds are qualified "J".

E3N73, E3N79

Aroclor-1254

E3N78

Aroclor-1260

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the Aroclor analysis was acceptable.

## 12. ADDITIONAL INFORMATION

The following samples were reanalyzed at the SVOA SIM CRQL because the reported non-detects or compounds below the CRQL at the routine SVOA CRQL levels.

E3N72MS, E3N72MSD, E3N73, E3N75, E3N76, E3N77, E3N78, E3N79, E3N80,  
E3N81, E3N82, E3N83, E3N84, E3N89

The following soil PAH samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E3N72, E3N79, E3N80

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 10 of 13  
SDG Number: E3N72  
Laboratory: Mitkem Laboratories

E3N73, E3N78, E3N81, E3N83, E3N84  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

The following soil PAH samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". No dilution was required because these are laboratory QC samples.

E3N72MS, E3N72MSD  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

The following soil SIM PAH samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". No dilutions were performed. The affected compounds are within the instruments calibration range from either the PAH or diluted PAH analyses.

E3N72  
2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene,  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,

Benzo(g,h,i)perylene

E3N78, E3N79, E3N80, E3N81  
Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene,  
Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N83, E3N84  
Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene,  
Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

The following soil SIM PAH sample has compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analysis

Case Number: 38701

SDG Number: E3N72

Site Name: Kinnickinnic River (WI)

Laboratory: Mitkem Laboratories

should be considered the final concentrations for Anthracene, Benzo(a)anthracene, Benzo(k)fluoranthene, and Benzo(a)pyrene. The remaining affected compounds also exceeded the instruments calibration range in the diluted analysis (E3N89DL). These compounds (Phenanthrene, Fluoranthene, Pyrene, Chrysene, and Benzo(b)fluoranthene) are qualified "J" in the diluted analysis (E3N89DL) and are within the instruments calibration range from the PAH analysis.

E3N89

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3N89DL

Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene

The following soil SIM PAH sample has compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analysis should be considered the final concentrations for the affected compounds.

E3N82

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following soil SIM PAH samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". No dilution was required because these are laboratory QC samples. The results from the PAH analyses were within the instruments calibration range for 2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene, and Dibenzo(a,h)anthracene.

E3N72MS, E3N72MSD

2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The CADRE spreadsheet did not include the following soil Aroclor sample. The laboratory's Form Is for this sample is included with the hard copy data package.

ALCS3G

The CADRE spreadsheet did not include the following water Aroclor sample. The laboratory's Form Is for this sample is included with the hard copy data package.

ALCS3P

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N72  
Laboratory: Mitkem Laboratories

The following soil Aroclor samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E3N72  
Aroclor-1254, Aroclor-1260

E3N78  
Aroclor-1254

E3N83, E3N84  
Aroclor-1248, Aroclor-1254

The following soil Aroclor samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". No dilution was required because these are laboratory QC samples.

E3N72MS  
Aroclor-1254, Aroclor-1260

E3N72MSD  
Aroclor-1254

The following soil Aroclor sample has compound concentrations which exceed the instruments calibration range on only 1 GC column (i.e. non-reportable value). Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N72MSD  
Aroclor-1260

The following soil Aroclor samples have compound concentrations whose presence were confirmed by GC/MS and are qualified with "C" on the laboratory's Form Is.

E3N83, E3N83DL, E3N84, E3N84DL  
Aroclor-1248

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUPERFUND DIVISION

DATE:

SUBJECT: Review of Data  
Received for Review on: September 3, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (15080102), WI

Case Number: 38701 SDG Number: E3ZW3

Number and Type of Samples: 20 soil samples (SVOA, SVOA SIM, Aroclors)

Sample Numbers: E3N03 – E3N09, E3N27 – E3N33, E3ZW3, E3ZX4 – E3ZX8

Laboratory: Mitkem Laboratories Hrs for Review: \_\_\_\_\_

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3N03 – E3N09, E3N27 – E3N33, E3ZW3, and E3ZX4 – E3ZX8 were collected from 08-10-09 thru 08-12-09. The samples were received by Mitkem Laboratories located in Warwick, RI on 08-12-09 and 08-13-09. All samples arrived intact and at the proper shipping temperature range of 2 - 6°C. All samples were analyzed according to CLP SOW SOM01.2 (6/2007) with modifications listed in the Modification Reference Number 1760.0, Title PAH only letter which is included with the data package. The samples were reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 SOP for Data Validation and the GLNPO request.

All twenty (20) samples were analyzed for the PAH (Polycyclic Aromatic Hydrocarbons) using SVOA full scan and the aroclor compounds. Fourteen (14) samples have either a PAH compound reported as non-detected or with a “J” flag in the undiluted SVOA samples and were analyzed for the SVOA SIM scan. The sample analyses are summarized in the following table:

The SVOA and SVOA SIM samples were analyzed for the following PAH analytes:

Naphthalene	2-Methylnaphthalene	Acenaphthylene
Acenaphthene	Fluorene	Phenanthrene
Anthracene	Fluoranthene	Pyrene
Benzo(a)anthracene	Chrysene	Benzo(b)fluoranthene
Benzo(k)fluoranthene	Benzo(a)pyrene	Indeno(1,2,3-cd)pyrene
Dibenzo(a,h)anthracene	Benzo(g,h,i)perylene	

Sample E3N09 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses. Sample E3N09 was used as the MS / MSD for the semivolatile and Aroclor fractions. Sample E3ZW3 was used as the MS /MSD for the semivolatile SIM fraction.

Samples E3N28/E3N29 are a field duplicate pair. No samples are identified as field blanks.

**1. HOLDING TIME**

No problems were found.

**2. GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

Calibration curves of 5.0, 10, 20, 40, 80 ng/ul for SVOA and 0.1, 0.2, 0.4, 0.8, 1.0 ng/ul for SVOA SIM as required by the SOW SOM01.2 were used to quantitate the PAH results.

No problems were found.

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3N28DL, E3ZX6DL,  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene,  
Anthracene

E3ZX7DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

The following diluted semivolatile SIM samples with dilution factors greater than 5 have deuterated monitoring compound recoveries below the lower limit of the criteria window. Detected and non-detected compounds are not qualified.

E3N03, E3N04, E3N05, E3N06, E3N28, E3N31, E3N32, E3N33DL, E3ZX5,  
E3ZX5RE, E3ZX6, E3ZX7  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries that are greater than 200%. Detected and non-detected compounds are not qualified.

E3N05, E3N05DL, E3N27DL, E3N28DL, E3N29DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N08DL, E3N09DL, E3N27, E3N29, E3N30DL

The following aroclor samples have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N08, E3N09, E3N09MS, E3N09MSD, E3N30, E3N31, E3ZX4, E3ZX5, E3ZX6, E3ZX7

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200%. Detected and non-detected compounds are not qualified.

E3N03DL, E3N04DL, E3N06DL, E3N32DL, E3ZX6DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N03, E3N06, E3N28

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3N09 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses. Sample E3N09 was used as the MS / MSD for the semivolatile and Aroclor fraction. Sample E3ZW3 was used as the MS /MSD for the semivolatile SIM fraction.

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected Pyrene in the unspiked samples (E3N09 and E3N09DL) is qualified "J".

E3N09MS, E3N09MSD  
Pyrene

The relative percent differences (RPDs) between the following semivolatile SIM matrix spike and matrix spike duplicate recoveries are outside criteria. Detected Pyrene in the unspiked

sample (E3ZW3) is qualified “J”. Non-detected Acenaphthene in the unspiked sample (E3ZW3) is qualified “UJ”.

E3ZW3MS, E3ZW3MSD  
 Acenaphthene, Pyrene

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria on only 1 GC column. Detected Aroclor-1260 in the unspiked samples (E3N09 and E3N09DL) is not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N09MS, E3N09MSD  
 Aroclor-1260

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

Samples E3N28/E3N29 are a field duplicate pair. No samples are identified as field blanks. The results for the duplicate samples are summarized in the following table:

SVOA full scan results						
	E3N28	E3N29		E3N28DL	E3N29DL	
Analytes	DF = 1.0	DF = 1.0	RPDs	DF = 5.0	DF = 8.0	RPDs

Aroclor-1260	790	980	21	1100	1500	30

Results are not qualified based upon the results of the field duplicates.

## 8. INTERNAL STANDARDS

The following semivolatile SIM samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J".

E3ZX5, E3ZX5RE

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## 9. COMPOUND IDENTIFICATION

After reviewing the chromatograms it appears that the semivolatile, semivolatile SIM and aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

E3N03

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Benzo(g,h,i)perylene

E3N03DL

Acenaphthene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N04, E3N05, E3N06, E3N28

Naphthalene

E3N04DL

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baselines for the aroclor analyses were acceptable.

## 12. ADDITIONAL INFORMATION

The following aroclor samples were reported in the EDD spreadsheet but not reported in the CADRE spreadsheet. The laboratory Form Is for these samples are included with the hard copy data package.

ALCS5A, ALCS5R, ALCS5X

The following semivolatile samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E3N03

Phenanthrene, Fluoranthene, Pyrene

E3N04, E3N07

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene

E3N05, E3N08, E3N28, E3N29, E3N32, E3ZX6

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

E3N06, E3N31, E3ZX4, E3ZX5, E3ZX7

Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene

E3N09

Fluorene, Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

E3N27

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene

E3N30

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene

The following semivolatile samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". No dilution was required because these are laboratory QC samples.

E3N09MS

Acenaphthene, Fluorene, Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene,  
Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

E3ZX4DL, E3ZX5DL

Naphthalene, Acenaphthylene

E3ZX7DL

2-Methylnaphthalene, Acenaphthylene

The following samples were reanalyzed at the SIM level of detection because they reported one or more compounds below the CRQL (J) from the semivolatile analyses (full scan).

E3N03, E3N04, E3N05, E3N06, E3N28, E3N31, E3N32, E3N33, E3ZX4, E3ZX5, E3ZX6, E3NX7

The following semivolatile SIM samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". No dilutions were analyzed; therefore the results should be considered the final concentrations for the affected compounds.

E3N03

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene

E3N04, E3N05, E3N28

2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N06, E3N31, E3N32, E3ZX4, E3ZX6, E3ZX7

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3ZX5, E3ZX5RE

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

The following semivolatile SIM samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from either the semivolatile analyses (full scan) or diluted semivolatile SIM analysis should be considered the final concentrations for the affected compounds.

E3N33

2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3N33DL

Phenanthrene, Fluoranthene, Pyrene

The following aroclor samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E3N03, E3N04, E3N05, E3N06, E3N27, E3N28, E3N29  
Aroclor-1248, Aroclor-1254

E3N08, E3N09, E3N30, E3ZX6  
Aroclor-1254

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 14 of 15  
SDG Number: E3ZW3  
Laboratory: Mitkem Laboratories

E3N32, E3N33  
Aroclor-1242, Aroclor-1248

The following aroclor samples have compound concentrations whose presence were confirmed by GC/MS and are qualified with "C".

E3N03, E3N03DL, E3N06, E3N06DL, E3N28, E3N28DL, E3N29, E3N29DL  
Aroclor-1248

E3N04, E3N04DL, E3N05, E3N05DL  
Aroclor-1248, Aroclor-1254

Benzo(b)fluoranthene (11000 ug/Kg) and Benzo(k)fluoranthene (10000 ug/Kg) were reported incorrectly for SVOA sample E3N29 on the CADRE and EDD spreadsheets. Raw data was used to verify the results. The corrected results for Benzo(b)fluoranthene and Benzo(k)fluoranthene are 9500 ug/Kg and 3500 ug/kg, respectively (as reported on the laboratory Form I). Corrections on both spreadsheets were made by this reviewer. Copies of the raw data for this sample are included with the hardcopy validation package.

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: September 4, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

SITE Name Kinnickinnic River (WI)

Case Number: 38701 MRN: 1760.0 SDG Number: E3N36

Number and Type of Samples: Twenty (20) Soil Samples (SV, SV-SIM, Aroclor)

Sample Numbers: E3N36-E3N41, E3N54-E3N66 and E3N74

Laboratory: Mitkem Laboratories Hrs for Review: 45 hrs

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 2 of 13  
SDG Number: E3N36  
Laboratory: Mitkem Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3N36 though E3N41; E3N54 though E3N66 and E3N74 were shipped to Mitkem Laboratories located in Warwick, RI. Six (6) samples; E3N36 through E3N41 were collected on 8/12/2009 and received 8/14/09 at the facility at 4 °C. Thirteen (13) samples E3N54 though E3N66 were sampled on 8/13/09 and received on 8/14/09 at the facility at 4 °C. Sample E3N74 was sampled on 8/13/09 and received on 8/14/09 at the facility at 6 °C. All samples were analyzed for the Semivolatile and Aroclor compounds. Only twelve (12) samples; E3N36, E3N41, E3N54 though E3N57, E3N61, E3N63 though E3N66 and E3N74 were analyzed for the Semivolatile SIM compounds.

All samples were analyzed according to CLP SOW SOM01.2 and Modification Reference Number 1760.0. Reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.4).

Sample E3N74 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses

Samples E3N65 and E3N66 were identified as field duplicates.

**1. HOLDING TIME**

No problems were found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3N36, E3N36DL, E3N54, E3N54DL, E3N55, E3N61, E3N62, E3N63, E3N63DL,  
E3N64, E3N64DL, E3N65, E3N65DL, E3N66, E3N66DL, E3N74, E3N74DL,  
E3N74MS, E3N74MSD, SBLK2E  
Fluorene

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

The following diluted semivolatile samples have with dilution factors greater than 5.0 have deuterated monitoring compound recoveries above the upper limit of the criteria window. Detected and non-detected compounds are not qualified.

E3N57DL  
Phenanthrene, Anthracene

E3N58DL, E3N62DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

E3N65DL  
Fluorene

E3N66DL  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N36  
Laboratory: Mitkem Laboratories

E3N54, E3N55, E3N57, E3N58, E3N61, E3N65, E3N66, E3N74  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

E3N56, E3N74MS, E3N74MSD  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3N36  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

The following semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3N36DL  
Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted SIM semivolatile samples with dilution factors greater than 5 have surrogate percent recoveries less than 10%. Detected and non-detected compounds are not qualified.

E3N36, E3N54, E3N55DL, E3N56, E3N57, E3N62, E3N63, E3N64, E3N65, E3N66,  
E3N74, E3N74MS, E3N74MSD

The following aroclor samples have surrogate percent recoveries which exceed criteria on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N36, E3N37, E3N38, E3N39, E3N40, E3N56, E3N57, E3N58, E3N59, E3N60,  
E3N62, E3N63, E3N64, E3N65, E3N66

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed the criteria on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N37DL, E3N38DL, E3N56DL, E3N57DL, E3N58DL, E3N62DL, E3N63DL,  
E3N64DL

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3N74 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses.

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked samples E3N74 and E3N74DL are qualified “J”.

E3N74MS/ E3N74MSD  
 Acenaphthene, Pyrene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked samples E3N74 and E3N74DL are qualified “J”.

E3N74MS/ E3N74MSD  
 Pyrene

Reported results for Aroclor analysis were from gc column CLP-PEST II. No problems were found.

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

Samples; E3N65/E3N66 were identified as Field Duplicates. The results are summarized in the following tables:

Semivolatile analytes	E3N65 µg/Kg	E3N66 µg/Kg	%RPDs	E3N65DL µg/Kg df=6	E3N66DL µg/Kg df=6	%RPDs
Naphthalene	630	650	3.1	640	560	13.3
2-Methylnaphthalene	420	370	12.7	370	1700	128.5
Acenaphthylene	240	220	8.7	1800	1700	5.7
Acenaphthene	1000	1000	0.0	970	850	13.2
Fluorene	1500	1500	0.0	1900	1300	37.5
Phenanthrene	11000	9100	18.9	15000	12000	22.2
Anthracene	830	810	2.4	2200	1800	20.0
Fluoranthene	17000	18000	5.7	27000	22000	20.4

Case Number: 38701  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3N36  
 Laboratory: Mitkem Laboratories

Pyrene	21000	18000	15.4	24000	23000	4.3
Benzo(a)anthracene	9000	9200	2.2	7500	6800	9.8
Chrysene	12000	12000	0.0	11000	10000	9.5
Benzo(b)fluoranthene	18000	15000	18.2	11000	9700	12.6
Benzo(k)fluoranthene	4700	7200	42.0	8600	8000	7.2
Benzo(a)pyrene	7900	7600	3.9	7000	6500	7.4
Indeno(1,2,3-cd)pyrene	3600	3400	5.7	4200	3600	15.4
Dibenzo(a,h)anthracene	1300	1500	14.3	1200	1000	18.2
Benzo(g,h,i)perylene	3400	3200	6.1	4200	3600	15.4

Results are not qualified based upon the results of the field duplicates.

semivolatile SIM analytes	E3N65 μg/Kg	E3N66 μg/Kg	%RPDs
Naphthalene	590	480	20.6
2-Methylnaphthalene	340	260	26.7
Acenaphthylene	160	190	17.1
Acenaphthene	600	710	16.8
Fluorene	870	960	9.8
Phenanthrene	5300	4800	9.9
Anthracene	900	820	9.3
Fluoranthene	8200	7400	10.3
Pyrene	3300	3300	0.0
Benzo(a)anthracene	2600	2900	10.9
Chrysene	2700	2800	3.6
Benzo(b)fluoranthene	4300	4400	2.3
Benzo(k)fluoranthene	2600	2500	3.9
Benzo(a)pyrene	3700	3500	5.6
Indeno(1,2,3-cd)pyrene	2800	2700	3.6
Dibenzo(a,h)anthracene	1200	1100	8.7
Benzo(g,h,i)perylene	3200	3100	3.2

Results are not qualified based upon the results of the field duplicates.

Results are not qualified based upon the results of the field duplicates.

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3N62, E3N74DL  
Phenanthrene, Anthracene, Fluoranthene

The following semivolatile sample have an internal standard area counts that are outside of the lower primary minimum criteria (50%) but greater than or equal to the expanded minimum criteria (20%). Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3N57, E3N74MS, E3N74MSD  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N58  
Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3N74  
Naphthalene, 2-Methylnaphthalene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SV, SV-SIM and Aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E3N36  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Benzo(g,h,i)perylene

E3N36DL  
2-Methylnaphthalene, Acenaphthylene, Fluorene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene

E3N37DL  
Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

Page 8 of 13  
SDG Number: E3N36  
Laboratory: Mitkem Laboratories

E3N38DL

Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

E3N39DL, E3N59DL, E3N62DL

Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3N40DL

Naphthalene, Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene

E3N54, E3N64, E3N65

Acenaphthylene

E3N54DL

Naphthalene, 2-Methylnaphthalene, Acenaphthene, Dibenzo(a,h)anthracene

E3N55

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene

E3N56, E3N57

Naphthalene

E3N56DL

Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

E3N57DL

Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N58DL, E3N60DL

Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N63DL

2-Methylnaphthalene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N64DL, E3N65DL

Naphthalene, 2-Methylnaphthalene, Acenaphthene, Dibenzo(a,h)anthracene

E3N66, E3N74, E3N74MS, E3N74MSD

Acenaphthylene

Case Number: 38701  
Site Name: Kinnickinnic River (WI)

SDG Number: E3N36  
Laboratory: Mitkem Laboratories

E3N66DL  
Naphthalene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3N74DL  
Naphthalene 2-Methylnaphthalene, Acenaphthylene, Acenaphthene,  
Dibenzo(a,h)anthracene

The following aroclor samples have percent differences between analyte results in the range 26-100%. Detected compounds are qualified "J".

E3N36, E3N38, E3N40, E3N59, E3N65, E3N66  
Aroclor-1254

E3N36DL, E3N38DL, E3N39, E3N62DL  
Aroclor-1260

The following aroclor samples have percent differences between analyte results exceeding 100%. Detected compounds are qualified "J".

E3N39  
Aroclor-1254

E3N66  
Aroclor-1260

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the aroclor analyses was acceptable.

## 12. ADDITIONAL INFORMATION

The following semivolatiles analyses have compound concentrations which exceed the instruments calibration range. The result was flagged "E" by the laboratory and are qualified "J". The results from the most diluted (sample ID with the suffix "DL") semivolatiles analyses should be considered the final concentrations for the affected compounds.

E3N36

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: July 30, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (15080102), WI

Case Number: 38702 SDG Number: E3ZS7

Number and Type of Samples: 1 water (Aroclors)

Sample Numbers: E3ZS7

Laboratory: KAP Technologies Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38702  
Site Name: Kinnickinnic River (WI)

Page 2 of 5  
SDG Number: E3ZS7  
Laboratory: KAP Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

One (1) water sample labeled E3ZS7 was collected 7-09-09. The sample was received by KAP Technologies, Inc. located in The Woodlands, TX on 7-10-09. The sample arrived intact and at the proper shipping temperature range of 2 - 6°C. Sample E3ZS7 was analyzed for the aroclor target compounds according to CLP SOW SOM01.2. The sample was reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 SOP for Data Validation plus the GLNPO customizations.

Sample E3ZS7 was not designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses. No MS / MSD samples were analyzed for this sample delivery group.

Sample E3ZS7 was not identified as a field blank or a field duplicate.

**1. HOLDING TIME**

No problems were found.

**2. GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

The following volatile samples are associated with a continuing calibration in which a DMC exceeded percent difference (%D) criteria. Detected and non-detected compounds are not qualified.

E3ZS7  
Decachlorobiphenyl

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

No problems were found.

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3ZS7 was not designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses. No MS / MSD samples were analyzed for this sample delivery group. No sample results are qualified for this deficiency.

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

Sample E3ZS7 was not identified as field blank or field duplicate.

**8. INTERNAL STANDARDS**

Not applicable to this analysis.

## **9. COMPOUND IDENTIFICATION**

After reviewing the chromatograms it appears that the aroclor compounds were properly identified.

## **10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

No problems were found.

## **11. SYSTEM PERFORMANCE**

The GC baselines for the aroclor analyses were acceptable.

## **12. ADDITIONAL INFORMATION**

The following aroclor sample was reported in the EDD spreadsheet but not report in the CADRE spreadsheet. The laboratory Form Is for this sample is included with the hard copy data package.

ALCS85

The samples were analyzed according to CLP SOW SOM01.2. The sample results were reported on forms from SOW SOM01.2 (06/2007). All QC results were reported on forms from SOW SOM01.1 (05/2005). The sample results are not qualified for this non-compliant.

Received for Review on: September 8, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (15080102), WI

Case Number: 38850 SDG Number: E3ZT5

Number and Type of Samples: 2 waters (Aroclors)

Sample Numbers: E3ZT5, E3ZT6

Laboratory: KAP Laboratories Hrs for Review: \_\_\_\_\_

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38850  
Site Name: Kinnickinnic River (WI)

Page 2 of 5  
SDG Number: E3ZT5  
Laboratory: KAP Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Two (2) water samples labeled E3ZT5 and E3ZT6 were collected on 08-18-09 and 08-25-09. The sample was received by KAP Technologies, Inc. located in The Woodlands, TX on 08-19-09 and 08-26-09. The samples arrived intact and at the proper shipping temperature range of 2 - 6°C. The samples were analyzed for the aroclor target compounds according to CLP SOW SOM01.2. The samples were reviewed according to the NFG for SOM01.2; the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3) and the Region 2 SOP for Data Validation and GLNPO requests.

Sample E3ZT6 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

None of the samples in this SDG were identified as field blanks or field duplicates.

**1. HOLDING TIME**

Form IV ARO (Aroclor Method Blank Summary) was not submitted with the data package. The laboratory extraction logs are included with the hard copy data package.

No problems were found.

**2. GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

No problems were found.

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

No problems were found.

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3ZT6 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No problems were found.

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

None of the samples in this SDG were identified as field blanks or field duplicates.

**8. INTERNAL STANDARDS**

Not applicable to this analysis.

SDG Number: E3ZT5  
Laboratory: KAP Laboratories

After reviewing the chromatograms it appears that the aroclor compounds were properly identified.

#### **10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS**

The following aroclor samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J". Non-detected compounds are not qualified.

ALCS08, ALCS38  
Aroclor-1016, Aroclor-1260

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified "J".

ALCS08  
Aroclor-1260

#### **11. SYSTEM PERFORMANCE**

The GC baselines for the aroclor analyses were acceptable.

#### **12. ADDITIONAL INFORMATION**

The following aroclor samples were reported in the EDD spreadsheet but not reported in the CADRE spreadsheet. The laboratory Form Is for these samples are included with the hard copy data package.

ALCS08, ALCS38

The samples were analyzed according to CLP SOW SOM01.2. The sample results were reported on forms from SOW SOM01.2 (06/2007). All QC results were reported on forms from SOW SOM01.1 (05/2005). The sample results are not qualified for this non-compliance.

CADRE Data Qualifier Sheet

Qualifiers

Data Qualifier Definitions

U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: 11 September 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO

We have reviewed the data for the following case:

SITE Name: Kinnickinnic River (WI)

Case Number: 38897 MRN: 1760.0 SDG Number: E3NF0

Number and Type of Samples: Twenty (20) soil samples

Sample Numbers: E3NF0 to E3NF9 and E3NG0 to E3NG9

Laboratory: Mitkem Laboratories Hrs for Review: 34

Following are our findings:

CC: Brenda R. Jones  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 2 of 14  
SDG Number: E3NF0  
Laboratory: Mitkem Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3NF0 through E3NF9, and E3NG0 through E3NG9, were shipped to Mitkem Laboratories located in Warwick, RI. Three (3) samples E3NG7 through E3NG9, were collected on 8/19/2009. Seventeen (17) samples; E3NF0 through E3NF9, and E3NG0 through E3NG6, were collected on 8/20/2009. All Twenty (20) samples were received on 8/21/09 intact. Samples E3NF3 through E3NF9 and E3NG7 through E3NG9, arrived at the proper shipping temperature range of 2 – 6 °C. Samples E3NF0 through E3NF2 and E3NG0 through E3NG6, arrived at the facility at 7 °C.

All samples were analyzed according to CLP SOW SOM01.2 and Modification Reference Number 1760.0. Reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3).

Sample E3NG0 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses.

Samples E3NF5 and E3NF6 as well as samples E3NG3 and E3NG4 were identified as field duplicates.

### 1. HOLDING TIME

No problems were found.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found.

### 3. CALIBRATION

The following SIM-semivolatile samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NF2, E3NF2DL, E3NF6, E3NF7, E3NF9, E3NG0, E3NG0MS, E3NG0MSD, E3NG1,  
E3NG4, E3NG6, E3NG9, SBLK5A  
Benzo(b)fluoranthene

E3NF2DL  
Chrysene

### 4. BLANKS

No problems were found.

### 5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples with dilution factors of 5 or less have deuterated monitoring compound recoveries above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NF5, E3NF6  
Naphthalene, 2-Methylnaphthaene, Acenaphthylene, Acenaphthene

The following semivolatile samples with dilution factors greater than or equal to 5, have percent recoveries above the upper limits. Detected and non-detected compounds are not qualified.

E3NF0DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene

E3NF1DL, E3NF3DL, E3NF6DL, E3NF7DL, E3NG0DL, E3NG1DL, E3NG2DL,  
E3NG3DL, E3NG4DL, E3NG5DL, E3NG7DL, E3NG8DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene,  
Anthracene

E3NF5DL, E3NF8DL  
Phenanthrene, Anthracene

The following SIM-semivolatile samples with dilution factors greater than or equal to 5 have percent recoveries below the expanded lower limit (20%). Detected and non-detected compounds are not qualified

E3NF2DL, E3NF3, E3NF6, E3NF7, E3NG0, E3NG0MS, E3NG0MSD, E3NG1,  
E3NG2, E3GN4, E3NG9

The following diluted aroclor samples with dilution factors greater than or equal to 5 have surrogate percent recoveries that are greater than 200%. Detected and Non-detected compounds are not qualified. In addition the surrogate was high on only 1 column, the second column was with in the QC limits.

E3NG7

The following aroclor samples have surrogate percent recoveries which exceed the primary maximum criteria but are less than or equal to the expanded maximum criteria. All values from the second column are with in QC limits and were used for data validation. Detected compounds and non-detected compounds are not qualified.

E3NF0, E3NF1, E3NF5, E3NG4

The following diluted aroclor samples with dilution factors greater than or equal to 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200%. Second column results are with in QC limits. Detected compounds and non-detected compounds are not qualified.

E3NF4DL, E3NF5DL, E3NG0DL, E3NG1DL, E3NG7DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200%. Secondary column results are with in QC limits. Detected compounds and non-detected compounds are not qualified.

E3NF4, E3NG0, E3NG0MS, E3NG0MSD, E3NG1

The following aroclor samples have surrogate recoveries less than the primary minimum criteria (30%) but greater than or equal to the expanded minimum criteria (10%). Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NF6, E3NG5

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3NG0 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

The following semivolatile matrix spike/ matrix duplicates have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked samples, E3NG0 and E3NG0DL, are qualified "J". Non-detected compounds in the unspiked sample are not qualified.

E3NG0MS, E3NG0MSD  
Pyrene

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked samples, E3NG0 and E3NG0DL, are qualified "J".

E3NG0MS, E3NG0MSD  
Pyrene

The relative percent difference (RPD) between the following SIM-semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked samples are qualified "J".

E3NG0MS, E3NG0MSD  
Acenaphthene, Pyrene

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria on both columns. Aroclor 1016 was not detected in the unspiked sample E3NG0 and E3NG0DL. The non-detected aroclors in the unspiked sample are not qualified. Detected Aroclor was qualified "J".

E3NG0MS, E3NG0MSD  
Aroclor 1016, Aroclor 1260

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

Samples E3NF5 and E3NF6 as well as samples E3NG3 and E3NG4 were identified as field duplicates. Results are summarized in the following table:

Case Number: 38897  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3NF0  
 Laboratory: Mitkem Laboratories

	E3NF5	E3NF6	%RPDs
Semivolatile analytes	µg/L	µg/L	
Naphthalene	470	260	58
2-Methylnaphthalene	1100	550	67
Acenaphthylene	950	700	30
Acenaphthene	2200	1200	59

Results are not qualified based upon the results of the field duplicates.

SIM-semivolatile analysis were not performed on any of the low/medium level semivolatile samples.

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NF1

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following semivolatile samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ" when the area is below the lower limit but greater than 20% of the 12-hour standard.

E3NG0MSD

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SV, SV SIM and Aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the aroclor analyses was acceptable.

## 12. ADDITIONAL INFORMATION

The laboratory Form Is for these samples did not match the data or the spreadsheets. Manual calculation of the data verified that the data and spreadsheets have the correct values.

E3NG1, E3NG2, E3NG4, E3NG7DL

The following semivolatile samples reported concentration that exceeded the instrument's linear calibration range. These result was flagged "E" by the laboratory and is estimated "J". The result from the diluted sample should be used for result validation.

E3NG0MS, E3NG0MSD

Aroclor 1016, Aroclor 1248, Aroclor 1254

The laboratory did not conduct any Sim analysis for samples E3NF5DL or E3NG3DL; therefore, no RPDs could be calculated for these field duplicates.

The laboratory did not conduct a diluted analysis for aroclor sample E3NF6DL or E3NG3DL ; therefore, no RPDs could be calculated for the field duplicates.

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

Superfund Field Services Section

TO: Data User: GLNPO / Ch2mHill

We have reviewed the data for the following case:

SITE Name: Kinnickinnic River (WI)

Case Number: 38897 MRN: 1760.0 SDG Number: E3N90

Number and Type of Samples: 20 Soil Samples (SVOA, SVOA-SIM, AROCLOR)

Sample Numbers: E3N90 - E3N99 and E3NA0 - E3NA9

Laboratory: Mitkem Laboratories Hrs for Review: 43

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 2 of 16  
SDG Number: E3N90  
Laboratory: Mitkem

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Number (20) soil samples labeled E3N90 through E3N99, and E3NA0 through E3NA9, were shipped to Mitkem Laboratory in Warwick, RI. Number (19) samples; E3N90 through E3N99, and E3NA0 through E3NA8 were collected on 08/19/2009 and received on 08/20/2009 intact and properly cooled. E3NA9 was collected on 08/18/2009 and received on 08/20/2009 intact and at 12 degrees upon receipt, no sample results were qualified for this non-compliance.

Nineteen (19) samples were analyzed for the SVOA, SVOA-SIM and Aroclor lists of compounds. One (1) sample; E3NA6, was analyzed for only the SVOA and Aroclor lists of compounds. All samples were analyzed according to CLP SOW SOM01.2 6/2007 and reviewed according to the NFG for SOM01.2, MRN 1760.0 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3).

Sample E3N91 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses.

Samples E3N94/E3N95 and E3N99/E3NA0 were identified as field duplicates.

Case Number: 38897

SDG Number: E3N90

Site Name: Kinnickinnic River (WI)Laboratory: Mitkem**1. HOLDING TIME**

No Problems Found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No Problems Found.

**3. CALIBRATION**

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3N90, E3N91, E3N91MS, E3N91MSD, E3N92, E3N93, E3N94, E3N95, E3N96,  
E3N97, E3N98, E3N99, E3NA0, E3NA1, E3NA2, E3NA3, E3NA4, E3NA5, E3NA6,  
E3NA7, E3NA8, E3NA9, SBLK20  
Fluorene

The following semivolatile samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ" unless qualified otherwise for non-compliance with another criterion.

E3N90, E3N91, E3N91MS, E3N91MSD, E3N92, E3N93, E3N94, E3N95, E3N96,  
E3N97, E3N98, E3N99, E3NA0, E3NA1, E3NA2, E3NA3, E3NA4, E3NA5, E3NA6,  
E3NA7, E3NA8, E3NA9, SBLK20  
Benzo(g,h,i)perylene

The following semivolatile SIM samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3N91, E3N91MS, E3N91MSD, E3N92, E3N93, E3N94, E3N95, E3N96, E3N98,  
E3N99, E3NA0, E3NA1, E3NA2, E3NA3, E3NA4, E3NA7, E3NA8, E3NA9, SBLK4K  
Chrysene, Benzo(k)fluoranthene

The following semivolatile SIM samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3N97, SBLK5C  
Benzo(b)fluoranthene, Benzo(k)fluoranthene

#### 4. BLANKS

No Problems Found.

#### 5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified unless qualified otherwise for non-compliance with another criterion.

E3N91, E3N91MSD, E3N92, E3N93, E3N94, E3N95, E3N97, E3N98, E3N99, E3NA0, E3NA1, E3NA2, E3NA5, E3NA6, E3NA9  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3N91MS, E3NA4, E3NA7  
Fluorene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following diluted semivolatile samples with dilution factors greater than 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non-detected compounds are not qualified.

E3N91DL, E3N93DL, E3N94DL, E3N95DL, E3N97DL, E3N98DL, E3N99DL, E3NA0DL, E3NA9DL  
Phenanthrene, Anthracene

E3NA4DL, E3NA5DL, E3NA6DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene, Anthracene

The following diluted semivolatile SIM samples with dilution factors less than or equal to 5 have deuterated monitoring compound recoveries less than or equal to 0%. Detected compounds are qualified "J". Non-detected compounds are qualified "R".

E3NA8DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted semivolatile SIM samples with dilution factors greater than 5 have deuterated monitoring compound recoveries less than or equal to 0%. Detected and non-detected compounds are not qualified.

Case Number: 38897

SDG Number: E3N90

Site Name: Kinnickinnic River (WI)Laboratory: Mitkem

E3N90, E3N91, E3N91MS, E3N91MSD, E3N92, E3N93, E3N94, E3N95, E3N97,  
E3N98, E3N99, E3NA0, E3NA1, E3NA2, E3NA4, E3NA5, E3NA7, E3NA9

The following Aroclor samples have surrogate recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N91MS, E3N91MSD, E3NA1, E3NA4, E3N97DL, E3NA5, E3NA5DL, E3NA6,  
E3NA6DL

The following aroclor samples have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3N92, E3N93, E3N95, E3N97, E3N98, E3N98DL, E3N99, E3NA0, E3NA4DL,  
E3NA9, E3NA9DL

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3N91 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked samples (E3N91 and E3N91DL) are qualified "J".

E3N91MS, E3N91MSD  
Pyrene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked sample (E3N91) are qualified "J".

E3N91MS  
Pyrene

E3N91MSD  
Acenaphthene, Pyrene

The relative percent difference (RPD) between the following semivolatile SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3N91) are qualified "J".

Case Number: 38897  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3N90  
 Laboratory: Mitkem

E3N91MS, E3N91MSD  
 Acenaphthene, Pyrene

The aroclor Form III –MS/MSD Summary was re-calculated using the lowest obtained value for each compound. The RPDs were re-calculated using these values.

	MS% REC	MSD%REC	RPDs	RPD QC	REC QC
Analytes	µg/Kg	µg/Kg			
Aroclor-1016	69	70	1.4	0-15	29-135
Aroclor-1260	-35	-26	-29.5*	0-20	29-135

The relative percent difference between aroclor analyte results less than the lower expanded limit (20%). Detected compounds qualified “J”. Nondetected compounds are qualified “R”.

E3N91MSD  
 Aroclor-1260

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3N91) are qualified “J”.

E3N91MS / E3N91MSD  
 Aroclor-1260

## 6B. LABORATORY CONTROL SAMPLE

No Problems Found.

## 7. FIELD BLANK AND FIELD DUPLICATE

Samples E3N94/E3N95 were identified as field duplicates. Results are summarized in the following table:

E3NA7

Phenanthrene, Fluoranthene, Pyrene, Benzo(b)fluoranthene

The following semivolatile samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

E3N91MS, E3N91MSD

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

The following semivolatile SIM samples have reported concentrations that exceed the instrument's linear calibration range in the original and diluted analysis. The results are flagged "E" by the laboratory and are estimated "J". The results with qualification from the diluted samples should be used for result validation.

## E3NA8

Phenanthrene, Fluoranthene

The following semivolatile SIM samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

## E3N91MS

Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)perylene, Benzo(g,h,i)perylene

## E3N91MSD

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)perylene, Benzo(g,h,i)perylene

The following Aroclor samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

## E3NA5

Aroclor-1248, Aroclor-1260

Case Number: 38897

SDG Number: E3N90

Site Name: Kinnickinnic River (WI)

Laboratory: Mitkem

The following aroclor samples have compound concentrations whose presence were confirmed by GC/MS and are qualified with "C" on the laboratory's Form Is.

E3NA6, E3NA6DL

Aroclor-1248

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: 15 Sept 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO

We have reviewed the data for the following case:

SITE Name: Kinnickinnic River (WI)

Case Number: 38897 MRN: 1760.0 SDG Number: E3NN9

Number and Type of Samples: 20 Soil Samples (SVOA, SVOA-SIM, AROCLOR)

Sample Numbers: E3NN9, E3NP1-E3NP9, E3NQ0-E3NQ5, E3NQ7-E3NQ9, E3NR0

Laboratory: Mitkem Laboratories Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 2 of 15  
SDG Number: E3NN9  
Laboratory: Mitkem

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3NN9, E3NP1-E3NP9, E3NQ0-E3NQ5, E3NQ7-E3NQ9, and E3NR0 were shipped to Mitkem Laboratory in Warwick, RI. All samples were collected on 08/22/2009 and received on 08/25/2009 intact and at 7 degrees C. No sample results were qualified for this deficiency.

Twenty (20) samples were analyzed for SVOA/ARO and Twelve (12) samples were analyzed for SVOA-SIM. All samples were analyzed according to CLP SOW SOM01.2 6/2007 and reviewed according to the NFG for SOM01.2, MRN 1760.0 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.4).

Sample E3NN9 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses.

Samples E3NQ3/E3NQ4 and E3NQ9/E3NR0 were identified field duplicates.

No Samples were identified as trip blanks or field blanks.

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NN9  
Laboratory: Mitkem

## 1. HOLDING TIME

The following semivolatile soil samples are outside primary extraction holding time criteria (14 days). Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NN9MS, E3NN9MSD

## 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No Problems Found.

## 3. CALIBRATION

The following SIM semivolatile samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NP8DL, E3NQ5DL, SBLK5K  
Chrysene

## 4. BLANKS

No Problems Found.

## 5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NN9MS, E3NN9MSD  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3NQ8  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluoranthene,  
Pyrene, Benzo(a)anthracene, Chrysene

The following diluted semivolatile samples with dilution factors greater than or equal to 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non detected compounds are not qualified.

E3NP4DL, E3NQ0DL, E3NQ1DL, E3NQ4DL, E3NQ7DL, E3NQ8DL

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 4 of 15  
SDG Number: E3NN9  
Laboratory: Mitkem

The following diluted semivolatile samples with dilution factors greater than or equal to 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected and non detected compounds are not qualified.

E3NP9DL

The following semivolatile SIM samples with dilution factors greater than or equal to 5.0 have deuterated monitoring compound recovery less than or equal to 0%. Detected and non-detected compounds are not qualified.

E3NP1, E3NP3, E3NP4, E3NP5, E3NP6, E3NP7, E3NP9, E3NQ9, E3NR0, E3NP8DL, E3NQ5DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NP5DL, E3NP9DL

The following aroclor samples have surrogate percent recoveries which exceed 150% but are less than or equal to the 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NN9MSD, E3NP3, E3NP4, E3NP9, E3NQ0, E3NQ1

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NP3DL, E3NP4DL, E3NP6DL, E3NQ0DL, E3NQ1DL, E3NQ7DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

SDG Number: E3NN9  
Laboratory: Mitkem

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3NN9 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3NN9, E3NN9DL) are qualified “J”. Nondetected compounds are qualified “UJ”.

E3NN9MS, E3NN9MSD  
Pyrene, Acenaphthene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked sample (E3NN9, E3NN9DL) are qualified “J”. Non-detected compounds are not qualified.

E3NN9MS  
Pyrene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries that are greater than or equal to the lower expanded criteria limit (5%) but less than the lower primary criteria limit. Detected compounds in the unspiked sample are qualified “J”. Non-detected compounds in the unspiked sample (E3NN9, E3NN9DL) are qualified “R”.

E3NN9MSD  
Pyrene

The relative percent difference (RPD) between the following semivolatile SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3NP2) are qualified “J”. Nondetected compounds are qualified “UJ”.

E3NP2MS, E3NP2MSD  
Acenaphthene, Pyrene

The aroclor Form III –MS/MSD Summary was re-calculated using the lowest obtained value for each compound. The RPDs were re-calculated using these values.

	MS% REC	MSD%REC	RPDs	RPD QC	REC QC
Analytes					
Aroclor-1016	140%* Conc=310ug/kg	134% Conc=297ug/kg	4.4%	0-15	29-135
Aroclor-1260	30% Conc=522ug/kg	22%* Conc=505ug/kg	30.8%*	0-20	29-135

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NN9  
Laboratory: Mitkem

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked sample (E3NN9, E3NN9DL) are qualified "J". Non-detected compounds are not qualified.

E3NN9MS  
Aroclor-1016

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries less than the lower acceptance criteria. Detected compounds on the unspiked sample (E3NN9, E3NN9DL) are qualified "J".

E3NN9MSD  
Aroclor-1260

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3N91, E3NN9DL) are qualified "J". Non-detected compounds are qualified "UJ".

E3NN9MS, E3NN9MSD  
Aroclor-1260

#### **6B. LABORATORY CONTROL SAMPLE**

No Problems Found.

#### **7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as trip blanks or field blanks.

Case Number: 38897  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3NN9  
 Laboratory: Mitkem

Samples E3NQ3/E3NQ4 were identified as field duplicates. Results are summarized in the following table:

	E3NQ3	E3NQ4	%RPDs	E3NQ3DL	E3NQ4DL	%RPDs
Semi Volatile analytes	µg/kg	µg/kg		µg/kg DF=20	µg/kg DF= 20

Results are not qualified based upon the results of the field duplicates.

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

### E3NN9

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following semivolatile samples have internal standard area counts that are outside the lower limit of primary criteria and greater than 20% of the associated 12 hour standard. Detected compounds are qualified "J". Nondetected compounds are qualified "UJ".

### E3NN9MS

Pyrene, Chrysene

### E3NQ7

Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

### E3NR0

2-Methylnaphthalene, Naphthalene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SVOA, SIM-SVOA, and Aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

## E3NP3, E3NP9

Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## E3NP4, E3NP5

2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## E3NP6, E3NP7

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## E3NP8

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene

## E3NQ5

Fluorene, Phenanthrene, Fluoranthene, Pyrene

## E3NQ9

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## E3NR0

Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following Aroclor samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

E3NN9, E3NP9, E3NQ0, E3NQ1, E3NQ7  
Aroclor-1254, Aroclor-1260

E3NP3, E3NP4, E3NP5  
Aroclor-1248, Aroclor-1254, Aroclor-1260

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NN9  
Laboratory: Mitkem

E3NP6  
Aroclor-1248, Aroclor-1254

The following Aroclor samples have compound concentrations whose presence were confirmed by GC/MS and are qualified "C" on the laboratory Form I's.

E3NP5, E3NP5DL  
Aroclor-1248, Aroclor-1254

The CADRE spreadsheet did not include the following Aroclor LCS sample. Form I's for this sample are included with the hard copy data package.

ALCS3N

The following Aroclor samples have compound concentrations which exceed the instruments calibration range on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NN9MS, E3NN9MSD  
Aroclor-1254

The following Aroclor sample incorrectly had a "P" flag on the laboratory Form I.

E3NN9MSD  
Aroclor-1254

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

DATE:

SUBJECT: Review of Data  
Received for Review on: 15 Sept 09

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO

We have reviewed the data for the following case:

SITE Name: Kinnickinnic River (WI)

Case Number: 38897 MRN:1760.0 SDG Number: E3NQ6

Number and Type of Samples: 16 Soil Samples, 2 Aqueous Samples

Sample Numbers: E3NQ6; E3NR1-E3NR9; E3NS0-E3NS7

Laboratory: Mitkem Laboratories Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 2 of 13  
SDG Number: E3NQ6  
Laboratory: Mitkem

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Sixteen (16) soil samples labeled E3NQ6, E3NR1 through E3NR9, E3NS0 through E3NS4, E3NS7 and two (2) aqueous samples labeled E3NS5 and E3NS6 were shipped to Mitkem Lab located in Warwick, Rhode Island. All samples were collected on 08/21/2009 and 08/22/2009 and received on 08/25/2009 intact and at 7 degrees C. No sample results were qualified for this deficiency.

All samples were analyzed according to CLP SOW SOM01.2 (06/2007) and reviewed according to the NFG for SOM01.2, MRN 1760.0 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.4). SIM analysis is not reported for samples E3NR2, E3NR4, E3NR5, E3NR8, E3NR9, E3NS0 and E3NS7 as all PAH compounds were detected above the CRQLs in the full scan SVOA analysis.

Soil sample E3NQ6 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses. No MS/MSD was performed for the water samples fraction. No sample results were qualified for this deficiency.

Samples E3NS0 and E3NS1 are identified as field duplicates. Samples E3NS5 and E3NS6 are identified as equipment blanks. E3NS7 is identified as a field duplicate of an unknown counterpart.

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NQ6  
Laboratory: Mitkem

### 1. HOLDING TIME

No Problems Found.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No Problems Found.

### 3. CALIBRATION

The following semivolatile SIM samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NQ6, E3NQ6MS, E3NQ6MSD, E3NR3, E3NR6, E3NS1, E3NS2, E3NS3, E3NS4,  
SBLK4X  
Chrysene, Benzo(k)fluoranthene

The following semivolatile SIM samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NQ6, E3NQ6MS, E3NQ6MSD, E3NR3, E3NR6, E3NS1, E3NS2, E3NS3, E3NS4,  
SBLK4X  
Pyrene, Benzo(b)fluoranthene

### 4. BLANKS

No Problems Found.

### 5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NR4, E3NR5, E3NS3  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

E3NR9  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NQ6  
Laboratory: Mitkem

E3NS0

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene, Anthracene

The following diluted semivolatiles samples with dilution factors greater than or equal to 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non-detected compounds are not qualified.

E3NQ6DL, E3NR5DL, E3NS7DL

Phenanthrene, Anthracene

E3NR2DL, E3NS0DL, E3NS2DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene, Anthracene

E3NR3DL, E3NR4DL, E3NR9DL, E3NS3DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene

The following semivolatiles SIM samples with dilution factors greater than or equal to 5.0 have deuterated monitoring compound recovery less than or equal to 0%. Detected and non-detected compounds are not qualified.

E3NQ6, E3NQ6MS, E3NQ6MSD, E3NR3, E3NR6, E3NS1, E3NS2, E3NS3

The following aroclor samples have surrogate percent recoveries which exceed 150% but are less than or equal to the 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NR2

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NR2DL, E3NR8DL

The following aroclor samples have surrogate recoveries less than the primary minimum criteria (30%) but greater than or equal to the expanded minimum criteria (10%) on both GC columns. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NR4

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NQ6  
Laboratory: Mitkem

The following Aroclor samples have surrogate recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NQ6MSD

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Soil sample E3NQ6 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses. No MS/MSD was performed for the water samples fraction. No sample results were qualified for this deficiency.

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries greater than or equal to the expanded lower acceptance limit but less than the primary lower acceptance limit. Detected compounds in the unspiked samples (E3NQ6 and E3NQ6DL) are qualified "J".

E3NQ6MS  
Acenaphthene, Pyrene

E3NQ6MSD  
Acenaphthene

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked samples (E3NQ6 and E3NQ6DL) are qualified "J".

E3NQ6MSD  
Pyrene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked sample (E3NQ6) are qualified "J".

E3NQ6MS, E3NQ6MSD  
Acenaphthene, Pyrene

The relative percent difference (RPD) between the following semivolatile SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3NQ6) are qualified "J".

E3NQ6MSD  
Acenaphthene

Case Number: 38897  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3NQ6  
 Laboratory: Mitkem

The aroclor Form III –MS/MSD Summary was re-calculated using the lowest obtained value for each compound. The RPDs were re-calculated using these values.

	MS% REC	MSD%REC	RPDs	RPD QC	REC QC
Analytes	µg/kg	µg/kg			
Aroclor-1016	181*	200*	10.0	0-15	29-135
Aroclor-1260	-25*	-7*	112.5*	0-20	29-135

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. The compound was not detected in the unspiked samples. Non-detected compound in the unspiked samples (E3NQ6 and E3NQ6DL) are not qualified.

E3NQ6MS, E3NQ6MSD  
 Aroclor-1016

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked sample (E3NQ6 and E3NQ6DL) are qualified “J”.

E3NQ6MS, E3NQ6MSD  
 Aroclor-1260

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3NQ6 and E3NQ6DL) are qualified “J”.

E3NQ6MSD  
 Aroclor-1260

## 6B. LABORATORY CONTROL SAMPLE

No Problems Found.

## 7. FIELD BLANK AND FIELD DUPLICATE

Samples E3NS0 and E3NS1 are identified as field duplicates. Samples E3NS5 and E3NS6 are identified as equipment blanks. E3NS7 is identified as a field duplicate of an unknown counterpart. That sample is located in another SDG, therefore no RPD is calculated for this field duplicate. Results for the field duplicate samples (E3NS0 and E3NS1) are summarized in the following table:

	E3NS0	E3NS1	%RPDs	E3NS0DL DF=16	E3NS1DL DF=10	%RPDs
Semi Volatile analytes	µg/kg	µg/kg		µg/kg	µg/kg	
Naphthalene	400	260	42.4	ND	ND	0
2-Methylnaphthalene	290	200	36.7	ND	ND	0
Acenaphthylene	530	380	33.0	ND	ND	0
Acenaphthene	920	660	32.9	910	560	47.6
Fluorene	1400	1200	15.4	1500	850	55.3
Phenanthrene	9900	7400	28.9	12000	7200	50.0
Anthracene	2400	1700	34.1	2800	1700	48.9
Fluoranthene	18000	13000	32.3	23000	15000	42.1
Pyrene	10000	8500	16.2	16000	9200	54.0
Benzo(a)anthracene	7400	5500	29.5	7700	6200	21.6
Chrysene	8300	6800	19.9	11000	5500	66.7
Benzo(b)fluoranthene	8700	7500	14.8	11000	6000	58.8
Benzo(k)fluoranthene	4700	2500	61.1	4600	4500	2.2
Benzo(a)pyrene	6400	4700	30.6	6900	4900	33.9
Indeno(1,2,3-cd)pyrene	4100	3100	27.8	3700	2700	31.3
Dibenzo(a,h)anthracene	2000	1500	28.6	1300	740	54.9
Benzo(g,h,i)perylene	4000	2900	31.9	3600	2700	28.6

	E3NS0	E3NS1	%RPDs
Analytes	µg/kg	µg/kg	
Aroclor-1248	45	34	27.8
Aroclor-1254	61	50	19.8

Results are not qualified based upon the results of the field duplicates.

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

### E3NQ6

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

### E3NQ6MS, E3NQ6MSD, E3NR2, E3NR3, E3NS7

Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NQ6  
Laboratory: Mitkem

E3NR2DL, E3NR4DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene, Fluoranthene

E3NR4, E3NR8

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following semivolatile SIM water samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NS5, E3NS5RE

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SVOA, SVOA-SIM and Aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E3NQ6

Naphthalene

E3NQ6DL, E3NS3DL

Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NR1

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

E3NR2DL, E3NS7DL

Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3NR3, E3NS1, E3NS2

Naphthalene, 2-Methylnaphthalene

E3NR3DL, E3NR4DL, E3NS2DL

Acenaphthylene, Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 9 of 13  
SDG Number: E3NQ6  
Laboratory: Mitkem

E3NR5DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NR6, E3NS3

2-Methylnaphthalene

E3NR6DL

Acenaphthylene, Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NR7

Phenanthrene, Fluoranthene, Pyrene

E3NR8DL

Naphthalene, Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NR9DL

Naphthalene, Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NS0DL, E3NS1DL

Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NS4

Fluoranthene, Pyrene, Chrysene

The following aroclor samples have percent differences between analyte results in the range of 26-50%. Detected compounds are qualified "J".

E3NR8

Aroclor-1254

E3NR9

Aroclor-1242, Aroclor-1248

The following aroclor samples have percent differences between analyte results in the range of 51-100%. Detected compounds are qualified "J".

E3NR5, E3NS0

Aroclor-1254

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 10 of 13  
SDG Number: E3NQ6  
Laboratory: Mitkem

E3NR8  
Aroclor-1260

The following aroclor samples have percent differences between analyte results exceeding 50% and the results are below CRQL. Detected compounds are qualified "U". Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL.

E3NS0  
Aroclor-1248

E3NS1  
Aroclor-1248, Aroclor-1254

### **SYSTEM PERFORMANCE**

GC/MS baseline indicated acceptable performance. The GC baseline for the aroclor analyses was acceptable.

### **11. ADDITIONAL INFORMATION**

The following semivolatile samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

E3NQ6, E3NR4  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

E3NR2  
Phenanthrene, Anthracene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3NR3, E3NS1, E3NS3  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene

E3NR5  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3NR6  
Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NQ6  
Laboratory: Mitkem

E3NR8, E3NR9

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene

E3NS0

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3NS2

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene

E3NS7

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Benzo(g,h,i)perylene

The following semivolatile samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

E3NQ6MS

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

E3NQ6MSD

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

The following semivolatile SIM samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The following samples were only analyzed once (at a dilution) for SVOA SIM analysis.

E3NQ6, E3NR3, E3NS1, E3NS2, E3NS3

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene,  
Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NR6

Naphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene,  
Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NQ6  
Laboratory: Mitkem

The following semivolatile SIM samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

E3NQ6MS

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NQ6MSD

2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following Aroclor samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

Received for Review on: September 10, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO / CH2M Hill

We have reviewed the data for the following case:

SITE Name: Kinnickinnic River (WI)

Case Number: 38897 MRN: 1760.0 SDG Number: E3NB0

Number and Type of Samples: 20 Soil Samples (SV, SV-SIM, Aroclor)

Sample Numbers: E3NB0-9 and E3NC0-9

Laboratory: Mitkem Laboratories Hrs for Review: 44 hr

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 2 of 11  
SDG Number: E3NB0  
Laboratory: Mitkem Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3NB0 through E3NB9, and E3NC0 through E3NC9, were shipped to Mitkem Laboratories located in Warwick, RI. Eighteen (18) samples; E3NB0 through E3NB9, and E3NC0 through E3NC7 were collected on 08/18/2009 and received on 08/20/2009 intact and at 12°C. Two (2) samples E3NC8 and E3NC9 were collected on 08/19/2009 and received on 08/20/2009 intact and at 9°C. All samples were analyzed for the Semivolatile and Aroclor compounds. Only six (6) samples; E3NB4, E3NC1 and E3NC6 through E3NC9, were analyzed for the Semivolatile SIM compounds.

All samples were analyzed according to CLP SOW SOM01.2 and MRN 1760.0, and reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3).

Sample E3NB7 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses. Laboratory substituted sample E3NB4 for the semivolatile-SIM MS/MSD because the designated sample was not analyzed for the SIM level compounds.

Samples E3NB7 and E3NB8 were identified as field duplicates.

**1. HOLDING TIME**

No problems were found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No problems were found.

**3. CALIBRATION**

The following semivolatile SIM samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NB4, E3NC1, E3NC6, E3NC7, E3NC8, E3NC9, SBLK4D  
Chrysene, Benzo(k)fluoranthene

The following semivolatile SIM samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NB4, E3NC1, E3NC7, SBLK4D  
Phenanthrene, Benzo(b)fluoranthene

E3NC6, E3NC8, E3NC9  
Benzo(b)fluoranthene

**4. BLANKS**

No problems were found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

The following semivolatile SIM samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NB4MS, E3NB4MSD  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NB0  
Laboratory: Mitkem Laboratories

The following Aroclor samples have surrogate recoveries that are greater than 150%. The values from the second column are within limits and will be reported. Detected compounds and non-detected compounds are not qualified.

E3NB0, E3NB2, E3NB5, E3NB7, E3NB7MS, E3NB7MSD, E3NB8, E3NB9, E3NC0,  
E3NC2, E3NC3, E3NC4

The following diluted aroclor samples with dilution factors greater than or equal to 5 and have surrogate percent recoveries which exceed 150%. Second column results are within QC limits. Detected compounds and non-detected compounds are not qualified.

E3NB5DL, E3NB6DL, E3NB8DL

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3NB7 was designated by the samplers to be used for laboratory QC, i.e. matrix spike/matrix spike duplicate analyses. Laboratory substituted sample E3NB4 for the SIM-semivolatile MS/MSD because the designated sample was not analyzed for the SIM level compounds.

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked samples (E3NB7 and E3NB7DL) are qualified "J".

E3NB7MS, E3NB7MSD  
Pyrene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked samples (E3NB7 and E3NB7DL) are qualified "J".

E3NB7MS, E3NB7MSD  
Pyrene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked sample, E3NB4, are qualified "J".

E3NB4MS, E3NB4MSD  
Pyrene

The aroclor Form III – MS/MSD Summary was re-calculated using the lowest obtained value for each compound. The RPDs were re-calculated using these values.

	MS % Rec.	MSD % Rec.	RPDs	RPD QC	REC. QC
Aroclor-1016	132	157*	17*	0-15	29 - 135
Aroclor-1260	234*	327*	33*	0-20	29 - 135

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Aroclors were not detected in the unspiked sample E3NB7 and are qualified "UJ".

E3NB7MS, E3NB7MSD  
 Aroclor-1016, Aroclor-1260

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria on both columns. Aroclor 1016 and Aroclor 1260 were not detected in the unspiked sample E3NB7. The non-Detected aroclors in the unspiked sample are not qualified for this criteria. Ultimately, the non-detected compounds in the unspiked sample are qualified "UJ" because of MS/MSD RPD criteria.

E3NB7MS  
 Aroclor-1260

E3NB7MSD  
 Aroclor-1016, Aroclor-1260

**6B. LABORATORY CONTROL SAMPLE**

No problems were found.

**7. FIELD BLANK AND FIELD DUPLICATE**

Sample EN3B7 and was identified as a field duplicate of sample EN3B8. Results are summarized in the following table:

Semivolatile analytes	E3NB7 μg/Kg	E3NB8 μg/Kg	%RPD
Naphthalene	350	490	33
2-Methylnaphthalene	460	980	72
Acenaphthylene	460	650	34
Acenaphthene	1200	1900	45
Fluorene	2000	3000	40
Phenanthrene	9900	11000	10
Anthracene	2900	4100	34

Case Number: 38897

SDG Number: E3NB0

Site Name: Kinnickinnic River (WI)

Fluoranthene	12000	13000	8
Pyrene	9400	11000	16
Benzo(a)anthracene	5900	9400	46
Chrysene	8400	6500	26
Benzo(b)fluoranthene	6700	9400	34
Benzo(k)fluoranthene	3700	5200	34
Benzo(a)pyrene	6400	9300	37
Indeno(1,2,3-cd)pyrene	4700	7000	39
Dibenzo(a,h)anthracene	2100	2900	32
Benzo(g,h,i)perylene	4600	6500	34

Semivolatile analytes	3NB7DL μg/Kg DF=10	E3NB8DL μg/Kg DF=20	%RPD
Acenaphthene	1200	2200	59
Fluorene	2100	3900	60
Phenanthrene	17000	32000	61
Anthracene	3000	6100	68
Fluoranthene	27000	51000	62
Pyrene	19000	33000	54
Benzo(a)anthracene	7700	14000	58
Chrysene	12000	20000	50
Benzo(b)fluoranthene	13000	21000	47
Benzo(k)fluoranthene	4600	9100	66
Benzo(a)pyrene	8000	13000	48
Indeno(1,2,3-cd)pyrene	5300	9100	53
Dibenzo(a,h)anthracene	1600	3000	61
Benzo(g,h,i)perylene	5200	9100	54

Results are not qualified based upon the results of the field duplicates.

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NB8

Acenaphthylene, Acenaphthene, Fluorene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

Reviewed by: Matthew Kobus / Techlaw-ESAT

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3ND0 through E3ND9, and E3NE0 through E3NE9, were shipped to Mitkem Laboratories located in Warwick, RI. Seventeen (17) samples; E3ND0 through E3ND9, and E3NE0 through E3NE6, were collected on 8/19/2009 and received 8/20/09. Three samples E3NE7 through E3NE9 were sampled on 8/20/09 and received on 8/21/09. Samples E3ND0 through E3ND9 and E3NE0 through E3NE6, arrived at the facility at 9 °C. Samples E3NE7 through E3NE9 arrived at the facility at 9 °C. All samples were analyzed for the Semivolatile and Aroclor compounds. Only thirteen (13) samples; E3ND0 through E3ND9, E3NE0, E3NE5 and E3NE6, were analyzed for the Semivolatile SIM compounds.

All samples were analyzed according to CLP SOW SOM01.2 and Modification Reference Number 1760.0. Reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.4).

Sample E3ND5 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses.

Samples E3ND1 and E3ND2 as well as samples E3NE3 and E3NE4 were identified as field duplicates.

### 1. HOLDING TIME

No problems were found.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found.

### 3. CALIBRATION

The following Semivolatile SIM samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3ND0, E3ND1, E3ND2, E3ND3, E3ND4, E3ND5, E3ND5MS, E3ND5MSD, E3ND6,  
E3ND7, E3ND8, E3ND9, E3NE0, E3NE5, E3NE6, SBLK4M  
Chrysene, Benzo(k)fluoranthene

The following Semivolatile SIM samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NDO, E3ND1, E3ND2, E3ND3, E3ND4, E3ND5, E3ND5MS, E3ND5MSD, E3ND6,  
E3ND7, E3ND8, E3ND9, E3NE0, E3NE5, E3NE6  
Fluoranthene, Benzo(k)fluoranthene

E3NDODL, E3ND1DL, E3ND2DL, E3ND3DL, E3ND5DL, E3ND6DL, E3ND7DL,  
E3ND8DL, E3NE5DL, E3NE6DL, SBLK5D  
Benzo(a)anthracene

SBLK4M  
Pyrene

The following semivolatile SIM samples are associated with a continuing calibration in which a surrogate/DMC exceeded percent difference (%D) criteria. Detected and non-detected compounds are not qualified.

E3NDO, E3ND1, E3ND2, E3ND3, E3ND4, E3ND5, E3ND5MS, E3ND5MSD, E3ND6,  
E3ND7, E3ND8, E3ND9, E3NE0, E3NE5, E3NE6  
Fluoranthene-d10

SBLK5D  
2-Methylnaphthalene-d10

#### 4. BLANKS

No problems were found.

#### 5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3ND6DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

The following diluted semivolatile samples with dilution factors greater than 5 have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected and non-detected compounds are not qualified.

E3NE7DL

Phenanthrene, Anthracene

The following diluted Semivolatile SIM samples with dilution factors less than or equal to 5 have deuterated monitoring compound percent recoveries below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ". Included is copy of RIC for data file. It appears to have a peak at the correct retention time of the missing deuterated monitoring compound.

E3NE6DL

Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted Semivolatile SIM samples with dilution factors greater than or equal to 5 have all deuterated monitoring compound percent recoveries less than the expanded limit. Detected and non-detected compounds are not qualified.

E3ND0DL, E3ND1DL, E3ND2DL, E3ND3DL, E3ND5DL, E3ND6DL, E3ND7DL, E3ND8DL, E3NE0, E3NE5DL

The following aroclor samples have surrogate percent recovery greater than the upper acceptance criteria on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NE0, E3NE0DL, E3NE1, E3NE1DL, E3NE2, E3NE2DL, E3NE3, E3NE7, E3NE7DL, E3NE8, E3NE8DL, E3NE9, E3NE9DL

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3ND5 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3ND5) are qualified "J". Nondetected compounds in the unspiked sample are qualified "UJ".

E3ND5MS, E3ND5MSD  
Pyrene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recovery greater than or equal to the expanded lower acceptance limit but less than the primary lower acceptance limit. Detected compounds in the unspiked sample are qualified "J". Non-detected compounds in the unspiked sample are qualified "UJ".

E3ND5MS  
Pyrene

The relative percent difference (RPD) between the following Semivolatile SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3ND5) are qualified "J". Nondetected compounds in the unspiked sample are qualified "UJ".

E3ND5MS, E3ND5MSD  
Acenaphthene

The following semivolatile-SIM matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked sample are qualified "J". Non-detected compounds in the unspiked sample are not qualified.

E3ND5MSD  
Acenaphthene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked sample are qualified "J". Non-detected compounds in the unspiked sample are qualified "R".

E3ND5MS, E3ND5MSD  
Pyrene

The following aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria on only 1 GC column. Detected Aroclor compounds in

Case Number: 38897  
 Site Name: Kinnickinnic River (WI)

SDG Number: E3ND0  
 Laboratory: Mitkem Laboratories

the unspiked samples are not qualified as the lower of the two possible values is within the acceptance range.

E3ND5MS, E3ND5MSD  
 Aroclor-1016

## 6B. LABORATORY CONTROL SAMPLE

No problems were found.

## 7. FIELD BLANK AND FIELD DUPLICATE

Two sets of samples; E3ND1/E3ND2 and E3NE3/E3NE4 were identified as Field Duplicates. The Field duplicates E3NE3 and E3NE4 were not analyzed for SIM PAH and therefore cannot be evaluated. The remaining of the results are summarized in the following tables:

Semivolatile analytes	E3ND1 μg/Kg	E3ND2 μg/Kg	%RPDs
Naphthalene	82	100	19.8
2-Methylnaphthalene	ND	58	200.0
Acenaphthene	73	110	40.4
Fluorene	98	120	20.2
Phenanthrene	510	710	32.8
Anthracene	110	160	37.0
Fluoranthene	710	1000	33.9
Pyrene	560	800	35.3
Benzo(a)anthracene	260	370	34.9
Chrysene	280	420	40.0
Benzo(b)fluoranthene	300	440	37.8
Benzo(k)fluoranthene	110	150	30.8
Benzo(a)pyrene	230	340	38.6
Indeno(1,2,3-cd)pyrene	140	200	35.3
Benzo(g,h,i)perylene	150	210	33.3

Results are not qualified based upon the results of the field duplicates.

Semivolatile analytes	E3NE3 μg/Kg	E3NE4 μg/Kg	%RPDs
Naphthalene	710	720	1.4
2-Methylnaphthalene	350	380	8.2

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NE0, E3NE1, E3NE4, E3NE7  
 Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
 Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following Semivolatile SIM samples have internal standard area counts that are less than the lower limit of the primary criteria but greater than 20% of the 12-hr Std area count. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3ND5  
 Naphthalene, 2-Methylnaphthalene, Pyrene, Benzo(a)anthracene, Chrysene,

E3ND0, N3ND6  
 Pyrene, Benzo(a)anthracene, Chrysene

The following semivolatile SIM sample has an internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J".

E3ND5  
 Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
 Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SV, SV-SIM and Aroclor compounds were properly identified; with the following possible exception. Semivolatile-SIM sample E3NE6DL is missing deuterated monitoring compound Fluoranthene-d10. RIC appears to have unknown peak at correct RT.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

### E3ND0

2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene

### E3ND1

Naphthalene, Acenaphthene, Fluorene, Anthracene, Benzo(a)anthracene, Chrysene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

### E3ND2

Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

### E3ND3

Anthracene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Benzo(g,h,i)perylene

### E3ND5

Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

### E3ND5MS

Naphthalene, 2-Methylnaphthalene, Fluorene, Dibenzo(a,h)anthracene

### E3ND5MSD

Naphthalene, 2-Methylnaphthalene, Fluorene

### E3ND6

Naphthalene, 2-Methylnaphthalene, Acenaphthene

### E3ND6DL, E3ND7, E3NE9DL

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

### E3ND8

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene

### E3NE0

Naphthalene, 2-Methylnaphthalene

Case Number: 38897

SDG Number: E3ND0

Site Name: Kinnickinnic River (WI)

Laboratory: Mitkem Laboratories

E3NE0DL, E3NE1DL, E3NE2DL, E3NE7DL, E3NE8DL  
Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

Aroclor-1248, Aroclor-1254.

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the aroclor analyses were acceptable.

## 12. ADDITIONAL INFORMATION

The following initial semivolatiles analyses have compound concentrations which exceed the instruments calibration range. The result was flagged “E” by the laboratory and are qualified “J”. The results from the most diluted (sample ID with the suffix “DL”) semivolatiles analyses should be considered the final concentrations for the affected compounds.

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data  
Received for Review on: September 14, 2009

FROM: Stephen L. Ostrodka, Chief (SRT-5J)  
Superfund Field Services Section

TO: Data User: GLNPO

We have reviewed the data for the following case:

Site Name: Kinnickinnic River (WI)

Case Number: 38897 MRN: 1760.0 SDG Number: E3NH0

Number and Type of Samples: Twenty (20) Soil Samples (SV, SV-SIM, Aroclor)

Sample Numbers: E3NH0 to E3NH9 and E3NJ0 to E3NJ9

Laboratory: Mitkem Laboratories Hrs for Review:

Following are our findings:

CC: Howard Pham  
Region 5 TPO  
Mail Code: SRT-5J

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 2 of 15  
SDG Number: E3NH0  
Laboratory: Mitkem Laboratories

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Twenty (20) soil samples labeled E3NH0 through E3NH9, and E3NJ0 through E3NJ9, were shipped to Mitkem Laboratories (Spectrum Analytical) located in Warwick, RI. Eight (8) samples; E3NH0 through E3NH7 were collected on 8/19/2009 and received 8/21/09 at the facility at 4 °C. Six (6) samples E3NH8, E3NH9, E3NJ0 through E3NJ3 were, sampled on 8/20/09 and, received on 8/22/09. Samples E3NJ4 through E3NJ9 were sampled on 8/21/09 and received on 8/22/09. The twelve (12) samples E3NH8, E3NH9, E3NJ0 through E3NJ9 arrived at the facility at 7 °C which was outside the required temperature range of 2 °C – 6 °C. No sample results are qualified for exceeded temperature. All samples were analyzed for the Semivolatile and Aroclor compounds. Only nine (9) samples; E3NH0, E3NH1, E3NH3, E3NH4, E3NH6 through E3NH8, E3NJ3 and E3NJ4, were analyzed for the Semivolatile SIM compounds.

All samples were analyzed according to CLP SOW SOM01.2 and Modification Reference Number 1760.0. Reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.4).

Sample E3NH2 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses. Laboratory substituted sample E3NH1 for the semivolatile-SIM MS/MSD because the designated sample was not analyzed for the SIM level compounds.

Samples E3NH4 and E3NH5 as well as samples E3NJ8 and E3NJ9 were identified as field duplicates. No samples were identified as field blanks.

### 1. HOLDING TIME

No problems were found.

### 2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found.

### 3. CALIBRATION

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NH0, E3NH2, E3NH2MS, E3NH2MSD, E3NH3, E3NH4, E3NH5, E3NH6, E3NH7,  
SBLK2P  
Fluorene

The following semivolatile-SIM samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NH0, E3NH1, E3NH3, E3NH4, E3NH6, E3NH7, SBLK4L  
Chrysene, Benzo(k)fluoranthene

The following semivolatile samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NH0, E3NH2, E3NH2MS, E3NH2MSD, E3NH3, E3NH4, E3NH5, E3NH6, E3NH7,  
SBLK2P  
Dibenzo(a,h)anthracene

The following semivolatile SIM samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NH0, E3NH1, E3NH3, E3NH4, E3NH6, E3NH7, SBLK4L  
Fluoranthene, Benzo(k)fluoranthene

E3NH7DL, E3NH8, E3NJ3, E3NJ4, SBLK5E, SBLK5F  
Benzo(a)anthracene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NH0  
Laboratory: Mitkem Laboratories

The following semivolatile SIM samples are associated with a continuing calibration in which a surrogate/DMC exceeded percent difference (%D) criteria. Detected and non-detected compounds are not qualified.

E3NH0, E3NH1, E3NH3, E3NH4, E3NH6, E3NH7, SBLK4L  
Fluoranthene-d<sub>10</sub>

#### 4. BLANKS

No problems were found.

#### 5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NH0, E3NH2MS, N3H2MSD  
Fluorene

E3NH2, E3NH3, E3NH5  
Fluorene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3NH4, E3NH6  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NH3  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene

The following diluted semivolatile samples with dilution factors greater than 5 have deuterated monitoring compound recoveries outside the criteria window. Detected and non-detected compounds are not qualified.

E3NH0DL, E3NH3DL, E3NH4DL, E3NH6DL  
Phenanthrene, Anthracene

E3NH2DL, E3NH5DL  
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Phenanthrene, Anthracene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

Page 5 of 15  
SDG Number: E3NH0  
Laboratory: Mitkem Laboratories

The following semivolatile-SIM samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

**E3NH1MS**

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted semivolatile SIM samples with dilution factors greater than 5 have deuterated monitoring compound recovery outside the criteria window. Detected and non-detected compounds are not qualified.

**E3NH0, E3NH3, E3NH4, E3NH6, E3NH8**

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries which exceed the primary maximum criteria but are less than or equal to the expanded maximum criteria on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

**E3NH0, E3NH2, E3NH2MSD, E3NH3, E3NH5, E3NH5DL, E3NH9, E3NJ0, E3NJ5, E3NJ7, E3NJ9**

The following diluted aroclor samples with dilution factors greater than 5 have deuterated monitoring compound recovery outside the criteria window. Detected and non-detected compounds are not qualified.

**E3NH8DL, E3NJ0DL, E3NJ5DL, E3NJ6DL, E3NJ7DL**

**6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3NH2 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses. Laboratory substituted sample E3NH1 for the semivolatile-SIM MS/MSD because the designated sample was not analyzed for the SIM level compounds.

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked samples (E3NH2 and E3NH2DL) are qualified "J".

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NH0  
Laboratory: Mitkem Laboratories

E3NH2MS, E3NH2MSD  
Acenaphthene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked samples (E3NH2 and E3NH2DL) are qualified “J”.

E3NH2MS, E3NH2MSD  
Pyrene

The relative percent difference (RPD) between the following semivolatile-SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3NH1) are qualified “J”. Non-detected compounds in the unspiked sample (E3NH1) is qualified “UJ”.

E3NH1MS, E3NH1MSD  
Acenaphthene, Pyrene

The following semivolatile-SIM matrix spike/matrix spike duplicate samples have percent recoveries that are greater than or equal to the lower expanded criteria limit but less than the lower primary criteria limit. Detected compounds in the unspiked sample (E3NH1) is qualified “J”.

E3NH1MSD  
Pyrene

The following semivolatile-SIM matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked sample (E3NH1) is qualified “J”.

E3NH1MS  
Pyrene

The aroclor Form III – MS/MSD Summary was re-calculated using the lowest obtained value for each compound. The RPD’s were re-calculated using these values.

Analytes	MS Recovery	MSD Recovery	% RPD	QC LIMITS	
Aroclor-1016	1151.4*	1190.0*	3.0	15	29 - 135
Aroclor-1260	70.6	82.9	15.8	20	29 - 135

The following Aroclor matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. The compound was not detected in the unspiked

Case Number: 38897  
 Site Name: Kinnickinnic River (WI)

samples, E3NH2 and E3NH2DL. The non-detected compound in the unspiked samples is not qualified.

E3NH2MS, E3NH2MSD  
 Aroclor 1016

## 6B. LABORATORY CONTROL SAMPLE

No problems were found.

## 7. FIELD BLANK AND FIELD DUPLICATE

Two sets of samples; E3NH4/E3NH5 and E3NJ8/E3NJ9 were identified as field duplicates. No samples were identified as field blanks. The samples E3NH5 and E3NJ8/E3NJ9 were not analyzed for SVOA SIM.

The results for the duplicate samples (E3NH4 and E3NH5) are summarized in the following tables:

Semivolatile analytes	E3NH4 μg/Kg df=1.0	E3NH5 μg/Kg df=1.0	RPDs	E3NH4DL μg/Kg df=10	E3NH5DL μg/Kg df=20	RPDs

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NH2

Phenanthrene, Anthracene, Fluoranthene

E3NH2MS, E3NH2MSD

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E3NH3, E3NH4, E3NH5

Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene

The following semivolatile SIM sample has an internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NH1MS

Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SV, SV-SIM and aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E3NH0

2-Methylnaphthalene, Acenaphthylene

E3NH0DL, E3NH4DL

Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NH2DL

Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene

E3NH2MS, E3H2MSD, E3NH4

Naphthalene, 2-Methylnaphthalene, Acenaphthylene

E3NH3

2-Methylnaphthalene

E3NH3DL, E3NH9DL, E3NJ5DL, E3NJ6DL, E3NJ7DL

Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3NH5DL

Naphthalene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NH6

Acenaphthylene

E3NH6DL,

Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene

E3NH7

Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(a)pyrene

E3NH8

Naphthalene

E3NH8DL

Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NJ0DL

Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

E3NH3  
Aroclor-1248, Aroclor-1260

E3NH4, E3NH5, E3NH8DL, E3NJ7DL  
Aroclor-1254

The following aroclor samples have percent differences between analyte results in the range 51-  
100%. Detected compounds are qualified "J".

Case Number: 38897  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NH0  
Laboratory: Mitkem Laboratories

E3NH2MS, E3NH2MSD, E3NH3, E3NH5DL, E3NH8, E3NJ8  
Aroclor-1254

E3NH3DL, E3NJ6DL, E3NJ7DL  
Aroclor-1248

E3NJ7  
Aroclor-1248, Aroclor-1254

The following aroclor samples have percent differences between analyte results exceeding 100%. Detected compounds are qualified "J".

E3NJ7DL, E3NJ8  
Aroclor-1260

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the aroclor analyses was acceptable.

## 12. ADDITIONAL INFORMATION

The CADRE spreadsheets did not include the following aroclor samples. Form Is for these samples are included with the hard copy data package. EDD spreadsheet included the results for these samples.

ALCS5S, ALCS5R

Semivolatile Blank "SBLK3P" was corrected to "SBLK2P" with replacement pages 0843R and 0844R. The spreadsheet has been corrected to reflect this correction.

The following semivolatiles analyses have compound concentrations which exceed the instruments calibration range. The result was flagged "E" by the laboratory and are qualified "J". The results from the most diluted (sample ID with the suffix "DL") semivolatiles analyses should be considered the final concentrations for the affected compounds.

E3NH0, E3NH2MS, E3NH3  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

Aroclor-1248

CADRE Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

Laboratory: Mitkem

**Below is a summary of the out-of-control audits and the possible effects on the data for this case:**

Number (20) soil samples labeled E3NT3 through E3NT9, E3NW0, E3NW1, E3NW6 through E3NW9, and E3NX0 through E3NX6 were shipped to Mitkem Laboratory in Warwick, RI. All samples were collected on 09/01/2009 and received on 09/02/2009 intact and properly cooled.

All samples were analyzed according to CLP SOW SOM01.2 8/2007 and reviewed according to the NFG for SOM01.2, MRN 1760.0 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.3).

Sample E3NW9 was designated by the samplers to be used for laboratory QC, i.e. MS/MSD analyses.

Samples E3NW9/E3NX0 and E3NT5/E3NT6 were identified as field duplicates.

**1. HOLDING TIME**

No Problems Found.

**2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE**

No Problems Found.

**3. CALIBRATION**

The following semivolatile SIM samples are associated with an opening or closing CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NT7DL, E3NT9DL, E3NX6RE  
Anthracene, Chrysene

**4. BLANKS**

No Problems Found.

**5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY**

The following diluted semivolatile samples with dilution factors less than or equal to 5 have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non detected compounds are qualified "UJ".

E3NW0DL, E3NW9DL  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E3NT4, E3NT6, E3NX3  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following semivolatile SIM samples with dilution factors greater than or equal to 5.0 have deuterated monitoring compound recovery less than or equal to 0%. Detected and non-detected compounds are not qualified.

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NW6DL, E3NW7DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries that are greater than 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NW6, E3NW7

The following aroclor samples have surrogate percent recoveries which exceed the primary maximum criteria but are less than or equal to the expanded maximum criteria on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NT3

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

E3NT3DL, E3NX3DL

The following diluted aroclor samples with dilution factors less than or equal to 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200% on only 1 GC column. Detected and non-detected compounds are not qualified as the lower of the 2 possible values (i.e. the reported value) is within the acceptance range.

#### **6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE**

Sample E3NW9 was designated by the samplers to be used for laboratory QC, i.e. matrix spike / matrix spike duplicate analyses.

The relative percent difference (RPD) between the following semivolatile SIM matrix spike and matrix spike duplicate recoveries is outside criteria. Detected compounds in the unspiked sample (E3NW9) are qualified "J". Nondetected compounds are not qualified.

E3NW9MS, E3NW9MSD  
Acenaphthene, Pyrene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries greater than the upper acceptance criteria. Detected compounds in the unspiked sample (E3NW9) are qualified "J". Non-detected compounds are not qualified.

E3NW9MS  
Acenaphthene, Pyrene

E3NW9MSD  
Pyrene

The following semivolatile SIM matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected compounds in the unspiked sample are qualified "J". Non-detected compounds in the unspiked sample (E3NW9) are qualified "R".

E3NW9MSD  
Acenaphthene

#### **6B. LABORATORY CONTROL SAMPLE**

No Problems Found.

#### **7. FIELD BLANK AND FIELD DUPLICATE**

No samples were identified as trip blanks.

Case Number: 38947  
Site Name: Kinnickinnic River (WI)

Results are not qualified based upon the results of the field duplicates.

## 8. INTERNAL STANDARDS

The following semivolatile samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NT3, E3NT6  
Pyrene, Benzo(a)anthracene, Chrysene

E3NT4, E3NX3  
Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene,  
Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)pyrene

The following semivolatile samples have internal standard area counts that are outside the lower limit of primary criteria and greater than the expanded lower limit. Detected compounds are qualified "J".

E3NX0  
Naphthalene, 2-Methylnaphthalene

The following semivolatile\_SIM samples have internal standard area counts that are outside the upper limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E3NT7, E3NT8, E3NW1, E3NX4  
Acenaphthylene, Ancenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene

E3NT9, E3NX6, E3NX6RE  
Acenaphthylene, Ancenaphthene, Fluorene

## 9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all SVOA and Aroclor compounds were properly identified.

## 10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E3NT3  
2-Methylnaphthalene

E3NT3DL, E3NW6DL  
Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

Case Number: 38947  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NT3  
Laboratory: Mitkem

E3NT4DL

Naphthalene, Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene

E3NT5, E3NT6, E3NW0, E3NW9MS, E3NX0

Acenaphthylene

E3NT5DL

Naphthalene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3NT6DL

Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

E3NT7

2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3NT8

2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3NT9

Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene

E3NW0DL, E3NW1

2-Methylnaphthalene, Acenaphthylene, Dibenzo(a,h)anthracene

E3NW6

Naphthalene

E3NW7DL

Acenaphthylene, Acenaphthene, Fluorene, Dibenzo(a,h)anthracene

E3NW8, E3NW9, E3NW9MSD, E3NX3, E3NX5

2-Methylnaphthalene, Acenaphthylene

E3NW8DL

Naphthalene, Acenaphthene, Fluorene, Anthracene, Benzo(k)fluoranthene,  
Dibenzo(a,h)anthracene

E3NW9DL

Naphthalene, Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NX0DL

Naphthalene, Acenaphthene, Fluorene, Anthracene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NX1  
2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Dibenzo(a,h)anthracene

E3NX2  
Phenanthrene, Fluoranthene, Pyrene

E3NX3DL  
Acenaphthene, Fluorene, Anthracene, Dibenzo(a,h)anthracene

E3NX4  
2-Methylnaphthalene, Acenaphthylene, Dibenzo(a,h)anthracene

## 11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the aroclor analyses was acceptable.

## 12. ADDITIONAL INFORMATION

The following SVOA samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

E3NT3, E3NT6, E3NW7, E3NW8, E3NX0, E3NX3  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene

E3NT4  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Benzo(b)fluoranthene,  
Benzo(a)pyrene

E3NT5  
Phenanthrene, Fluoranthene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene,  
Benzo(a)pyrene, Pyrene

E3NW0  
Phenanthrene, Fluoranthene, Pyrene

E3NW6  
Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Benzo(g,h,i)perlyene

E3NW9  
Phenanthrene, Fluoranthene, Pyrene, Benzo(b)fluoranthene

The following semivolatile SIM samples have reported concentrations that exceed the instrument's linear calibration range. The results are flagged "E" by the laboratory and are estimated "J". The following samples were only analyzed once (at a dilution) for SVOA SIM analysis.

E3NT3

Naphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NT5

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene

E3NT6, E3NW8, E3NW9, E3NX0

Naphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NW0

Naphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene

E3NW6

2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NX1

Naphthalene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)perylene

E3NX3

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E3NX5

Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene

Case Number: 38947  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NT3  
Laboratory: Mitkem

The following semivolatile samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

E3NW9MS

Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene

E3NW9MSD

Phenanthrene, Fluoranthene, Pyrene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene

The following semivolatile SIM samples have reported concentrations that exceed the instrument's linear calibration range in the original and diluted analysis. The results are flagged "E" by the laboratory and are estimated "J". The results with qualification from the diluted samples should be used for result validation.

E3NT7, E3NT8, E3NX4

Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Fluorene,  
Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene,  
Dibenzo(a,h)anthracene

E3NT7DL

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene

E3NT8DL

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene

E3NW1

Naphthalene, 2-Methylnaphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene,  
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene,  
Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene,  
Benzo(g,h,i)perylene

E3NW1DL

Phenanthrene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene

E3NX4DL

Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene,  
Benzo(b)fluoranthene, Benzo(k)fluoranthene

Case Number: 38947  
Site Name: Kinnickinnic River (WI)

SDG Number: E3NT3  
Laboratory: Mitkem

The following semivolatile SIM samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

E3NT9, E3NX2  
Phenanthrene, Fluoranthene, Pyrene, Benzo(b)fluoranthene

The following semivolatile SIM samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". No further diluted analysis was performed since this sample was used for QC purposes only.

E3NW9MS, E3NW9MSD  
Naphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following Aroclor samples have reported concentrations that exceeded the instrument's linear calibration range. These results were flagged "E" by the laboratory and are estimated "J". The results from the diluted samples should be used for result validation.

E3NT3, E3NX3  
Aroclor 1242, Aroclor 1248, Aroclor 1254

E3NW6, E3NW7, E3NW8  
Aroclor 1248, Aroclor 1254

The following aroclor samples have compound concentrations whose presence were confirmed by GC/MS and are qualified with "C" on the laboratory's Form Is.

E3NX3, E3NX3DL  
Aroclor-1242

E3NW6, E3NW6DL, E3NW7, E3NW7DL, E3NX3, E3NX3DL  
Aroclor-1248

E3NW7, E3NW7DL  
Aroclor-1254

Cadre Data Qualifier Sheet

<u>Qualifiers</u>	<u>Data Qualifier Definitions</u>
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

<sup>1</sup>Individual Aroclor results are final values.

<sup>2</sup>Final PCB Totals represent the sum of Aroclors 1242, 1248, 1016, 1221, 1232, 1242, and 1248. If an Aroclor was not detected (U or UJ qualifier), half of the reported sample quantitation limit was added to the total.

<sup>3</sup>Preliminary PCB Totals are reported because these were typically used for time-critical project decisions.

<sup>4</sup>A "J" qualifier indicates the analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

<sup>5</sup>A "U" qualifier indicates the analyte was analyzed for but was not detected above the reported sample quantitation limit.

<sup>6</sup>A "UJ" qualifier indicates the analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

<sup>7</sup>An "R" qualifier indicates the result was rejected because of serious deficiencies in the ability to analyze the sample and meet the QC criteria. The presence or absence of the analyte could not be verified.

<sup>1</sup>Individual polycyclic aromatic hydrocarbon results are final values.

<sup>2</sup>Final PAH Totals represent the sum of all 18 individual PAHs shown. If an individual PAH was not detected (U or UJ qualifier), half of the reported sample quantitation limit was added to the total.

<sup>3</sup>Preliminary PAH Totals are reported because these were typically used for time-critical project decisions.

<sup>4</sup>A "U" qualifier indicates the analyte was analyzed for but was not detected above the reported sample quantitation limit.

<sup>5</sup>A "J" qualifier indicates the analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

<sup>6</sup>A "UJ" qualifier indicates the analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

<sup>1</sup>Individual polycyclic aromatic hydrocarbon results are final values.

<sup>2</sup>Final PAH Totals represent the sum of all 18 individual PAHs shown. If an individual PAH was not detected (U or UJ qualifier), half of the reported sample quantitation limit was added to the total.

<sup>3</sup>Preliminary PAH Totals are reported because these were typically used for time-critical project decisions.

<sup>4</sup>A "U" qualifier indicates the analyte was analyzed for but was not detected above the reported sample quantitation limit.

<sup>5</sup>A "J" qualifier indicates the analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

<sup>6</sup>A "UJ" qualifier indicates the analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Table B-5  
 KK River Project  
 Dewatering PCB Data, June—April 2010

Final PCB Aroclor Data <sup>1</sup>			Aroclor-1016	Aroclor-1221	Aroclor-1232	Aroclor-1242	Aroclor-1248	Aroclor-1254	Aroclor-1260	Aroclor-1262	Aroclor-1268	Final PCB Total <sup>2</sup>
Station Location	EPA Sample No.	Sample Date	(ug/kg)	(ug/kg)	(ug/kg)	(ug/kg)	(ug/kg)	(ug/kg)	(ug/kg)	(ug/kg)	(ug/kg)	(mg/kg)
KK-EB-06	E3P38	9/3/2009	1 U	1 U	1 U	1 U	1 U	1 U	1 U	1 U	1 U	0.003
KK-EB-07	E3P72	9/22/2009	1 U	1 U	1 U	1 U	1 U	1 U	1 U	1 U	1 U	0.003
KK-PG-EB-01	E3PC8	12/4/2009	1 U	1 U	1 U	1 U	1 U	1 U	1 U	1 U	1 U	0.003

<sup>1</sup>Individual Aroclor results are final values.

<sup>2</sup>Final PCB Totals represent the sum of Aroclors 1242, 1248, 1016, 1221, 1232, 1242, and 1248. If an Aroclor was not detected (U or UJ qualifier), half of the reported sample quantitation limit was added to the total.

<sup>3</sup>A "U" qualifier indicates the analyte was analyzed for but was not detected above the reported sample quantitation limit.

<sup>4</sup>A "UJ" qualifier indicates the analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Contract Laboratory Program

### Sample Delivery Group (SDG) Cover Sheet

SDG Number E3ZW3

Laboratory Name	<u>Mitkem Laboratories</u>	Lab Code	<u>MITKEM</u>
Contract No.	<u>EP-W-05-030</u>	Case No.	<u>38701</u>
Analysis Price	<u>d437</u>	SDG Turnaround	<u>21 days with PR</u>

EPA Sample Numbers in SDG (Listed in Numerical Order)

01) E3N03	08) E3N09MS	15) E3N32	22) E3ZX8
02) E3N04	09) E3N09MSD	16) E3N33	
03) E3N05	10) E3N27	17) E3ZW3	
04) E3N06	11) E3N28	18) E3ZX4	
05) E3N07	12) E3N29	19) E3ZX5	
06) E3N08	13) E3N30	20) E3ZX6	
07) E3N09	14) E3N31	21) E3ZX7	

First Sample in SDG

E3ZW3

Last Sample in SDG

E3N33

First Sample Receipt Date

08/12/2009

Last Sample Receipt Date

08/13/2009

Note: There are a maximum of 20 field samples [excluding Performance Evaluation (PE) samples in an SDG. Attach the TR/COC Records to this form in alphanumeric order (the order listed above on this form).
