Final Risk Evaluation for n-Methylpyrrolidone

Systematic Review Supplemental File:

Data Quality Evaluation of Environmental Release and Occupational Exposure - Common Sources

CASRN: 872-50-4

December 2020

This document is a compilation of tables for the data extraction and evaluation of common sources for environmental releases and occupational exposure of the first 10 chemicals. This document may contain sources that were not used for the risk evaluation of N-Methylpyrrolidone (NMP). Each table shows the data point or set or information element that was extracted and evaluated from a data source in accordance with Appendix D of the *Application of Systematic Review in TSCA Risk Evaluations*. If the source contains more than one data set or information element, the review provides an overall confidence score for each data set or information element that is found in the source. Therefore, it is possible that a source may have more than one overall quality/confidence score.

Explanatory Notes

These explanatory notes provide context to understand the short comments in the data evaluation tables.

Domain	Metric	Description of Comments Field
Reliability	Methodology	Indicates the sampling/analytical methodology, estimation method, or type of publication
Representativeness	Geographic Scope	Indicates the country of the study, publication, or underlying data
	Applicability	Indicates whether the data are for a condition of use within scope of the Risk Evaluation
	Temporal Representativeness	Provides the year of study, publication, or underlying data
	Sample Size	Describes the distribution of the sample or underlying data
Accessibility / Clarity	Metadata Completeness	Describes the completeness of the metadata
Variability and Uncertainty	Metadata Completeness	Indicates if study or publication addresses variability and uncertainty of the data or information

	Metric 1:	Methodology	High	× 1	1	Article is published in peer-reviewed scientific journal.			
Domain 2: Repres	sentative								
	Metric 2:	Geographic Scope	Medium	\times 1	2	Data based on German facilities (OECD country).			
	Metric 3:	Applicability	High	\times 2	2	Degreasing facility data are applicable to the scope of the model.			
	Metric 4:	Temporal Representativeness	Medium	\times 2	4	Work based on dissertation published in 2003. More than 10 but less than 20 years old.			
	Metric 5:	Sample Size	Medium	× 1	2	The various data elements used from the study are presented mostly as ranges or averages.			
Domain 3: Access	sibility/Clar	ity							
	Metric 6:	Metadata Completeness	Medium	× 1	2	Sources are cited, but does not provide details on how reported values were derived from cited sources.			
Domain 4: Variab	sility and Ur	acortainty							
Domain 4. Variat		Metadata Completeness	Medium	× 1	2	Variability in parameter values discussed, but no discussion of uncertainties.			
Overall Quality Determination [†]			Medium		1.7				

^{*} MWF = Metric Weighting Factor † If any individual metrics are deemed Unacceptable, then the overall rating is also unacceptable. Otherwise, the overall rating is based on the following scale: High: ≥ 1 to < 1.7; Medium: ≥ 1.7 to < 2.3; Low: ≥ 2.3 to ≤ 3 .

EXTRACTION Parameter		Data					
Life Cycle Stage: Life Cycle Description (Subcategory of Use): Total Annual U.S. Volume (and percent of PV): Number of Sites: Possible Physical Form: Chemical Concentration:			Manufacture and Import Manufacture and Import Provides U.S. domestic manufactured and imported PV and percent PV to downstream uses. Provides number of manufacturing and import sites. Provides physical form. Provides concentration.				
EVALUATION Domain	Metric	Rating	MWF*	Score	Comments		
Domain 1: Reliability Metric 1:	Methodology	High	× 1	1	EPA is a trusted source.		
Domain 2: Representative							
Metric 2: Metric 3:	Geographic Scope Applicability	High High	$\times 1 \times 2$	$\frac{1}{2}$	CDR is U.S. based data.		
		mgn	X Z		CDR covers chemical manufacturers and importers, which are in scope for all chemicals.		
Metric 4:	Temporal Representativeness	High	$\times 2$	2	EPA used data from the 2016 CDR, which includes data reported for 2015.		
Metric 5:	Sample Size	Medium	× 1	2	Due to reporting threshold, statistical representativeness is unclear. $$		
Domain 3: Accessibility/Clar Metric 6:	rity Metadata Completeness	Medium	× 1	2	Submissions do not include method of how production volumes were determined. CDR industry sector codes, industrial processing and use codes, industrial function codes, and commercial product codes provide good metadata; but lack of clarifying information and narratives and occasional misreportings limit clarity of data.		
Domain 4: Variability and U Metric 7:	ncertainty Metadata Completeness	Low	× 1	3	CDR data do not address variability or uncertainty in submitter provided data.
