## NATTS QA Objective

Data Quality Objective (DQO) is in support of the GPR A goal of reduction of Air Toxics by 75% (1993 levels) by 2010:

*“To be able to detect a 15% difference (trend) between two successive 3-year annual mean concentrations within acceptable levels of decision error.”*

To meet this DQO we need:

- **1-in-6 day sampling frequency with at least an 85% quarterly completeness**
- **Precision controlled to a Coefficient of Variance (CV) of no more than 15%**
- **Detectability based on 2001 Pilot Study Minimum Detection Limits (MDLs)**
- **Bias for the data set of less than 25%**

These are our Measurement Quality Objectives (MQOs)!

# Measurement Quality Objectives

How are these determined?

- Precision: Determined by analyzing collocated/dual samples or analyzing sample twice (replicate)
- Bias: EPA sends out blind PT samples to the labs – report back results
- Completeness: Calculated from number of samples reported to AQS divided by possible samples
- Detectability: Determined by laboratories using EPA Method of 7 duplicate samples near the level of detection

# NATTS QA Program

## Measurement Quality Objectives (MQOs)

<b>Compound</b>	<b>Precision (CV)</b>	<b>Bias (Lab)</b>	<b>Detectability</b>	<b>Completeness</b>
<b>Arsenic</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.217 ng/m<sup>3</sup></b>	<b>&gt; 85%</b>
<b>Benzene</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.016 ug/m<sup>3</sup></b>	<b>&gt; 85%</b>
<b>1,3-Butadiene</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.013 ug/m<sup>3</sup></b>	<b>&gt; 85%</b>
<b>Formaldehyde</b>	<b>&lt; 15%</b>	<b>&lt; 25%</b>	<b>0.0074 ug/m<sup>3</sup></b>	<b>&gt; 85%</b>

## Meeting Objectives: Precision Results 2004 - 2008

Five Year Average:

**Benzene: 25%**

**1,3 Butadiene 19%**

**Formaldehyde: 16%**

**Arsenic: 12%**

**Only Arsenic is meeting our Precision MQO**

## Meeting Objectives: Overall Precision vs. Analytical Precision -2008

■ Method  
■ Analytical

Analytical Precision accounts for laboratory practices and instrumentation

Method Precision accounts for analytical precision, sample handling and field operations

# Meeting Objectives: Overall Precision of 1,3 butadiene + Benzene

## 1,3, Butadiene

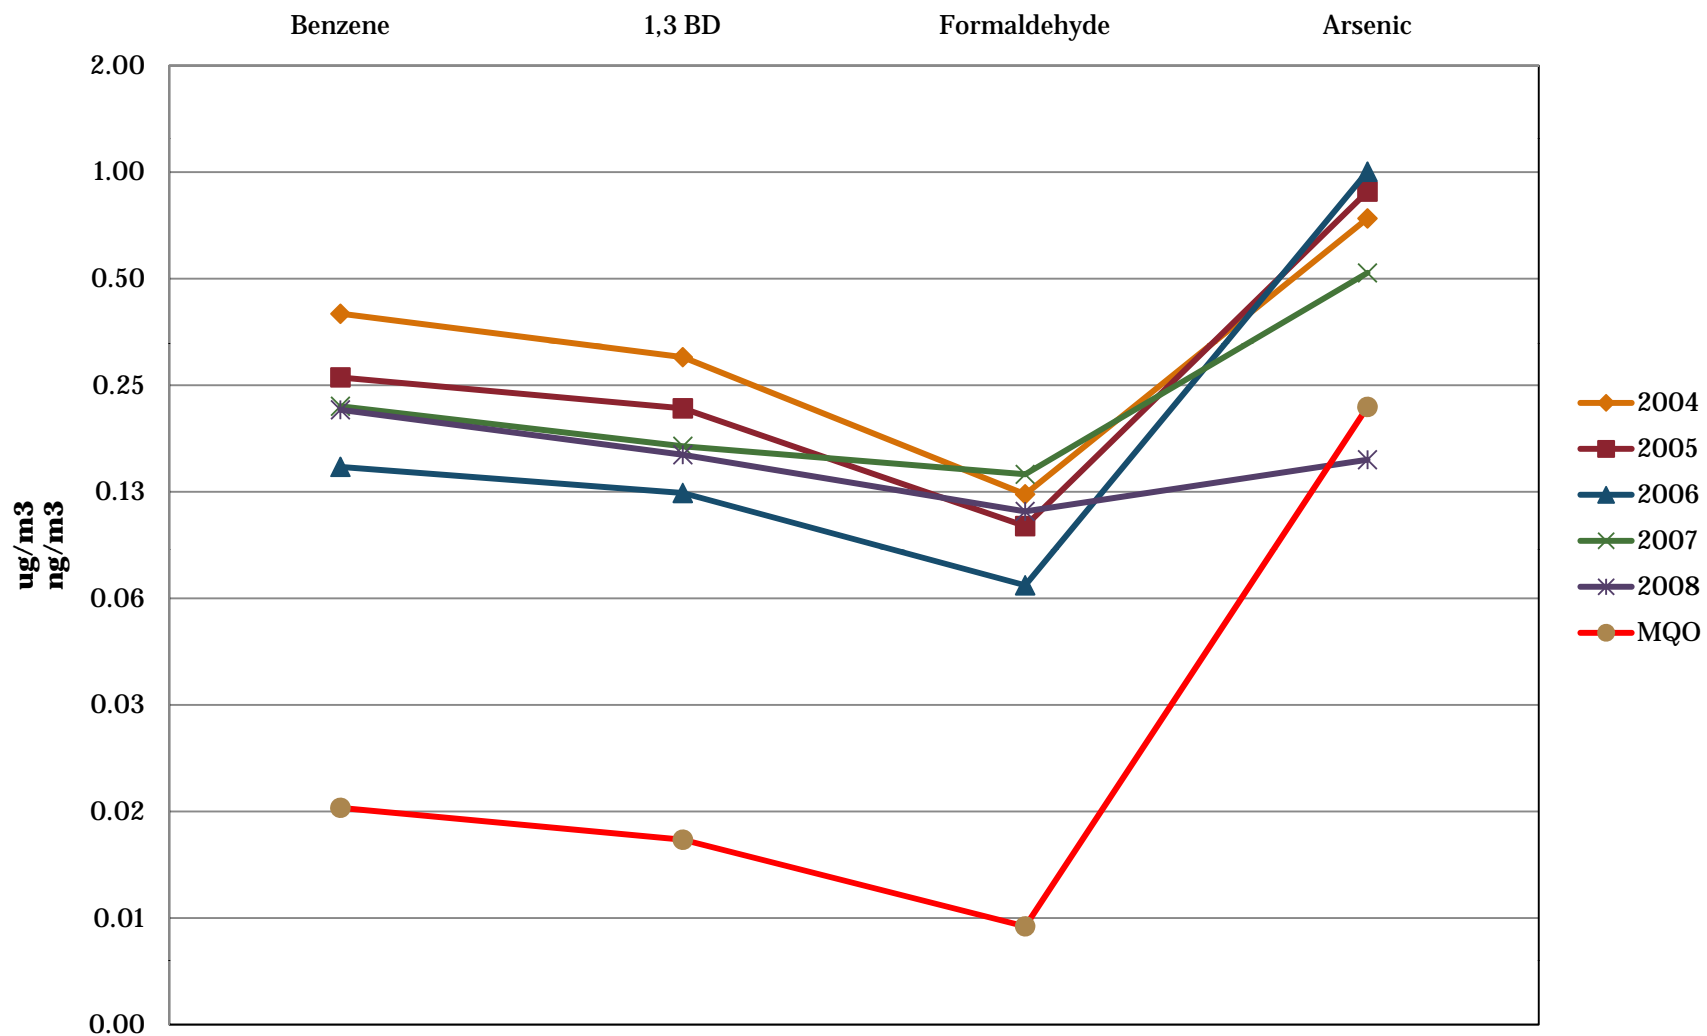

## Benzene

## Meeting Objectives: Method Detection Limits 2004 - 2008

## Meeting Objectives: Method Detection Limits 2004 – 2008

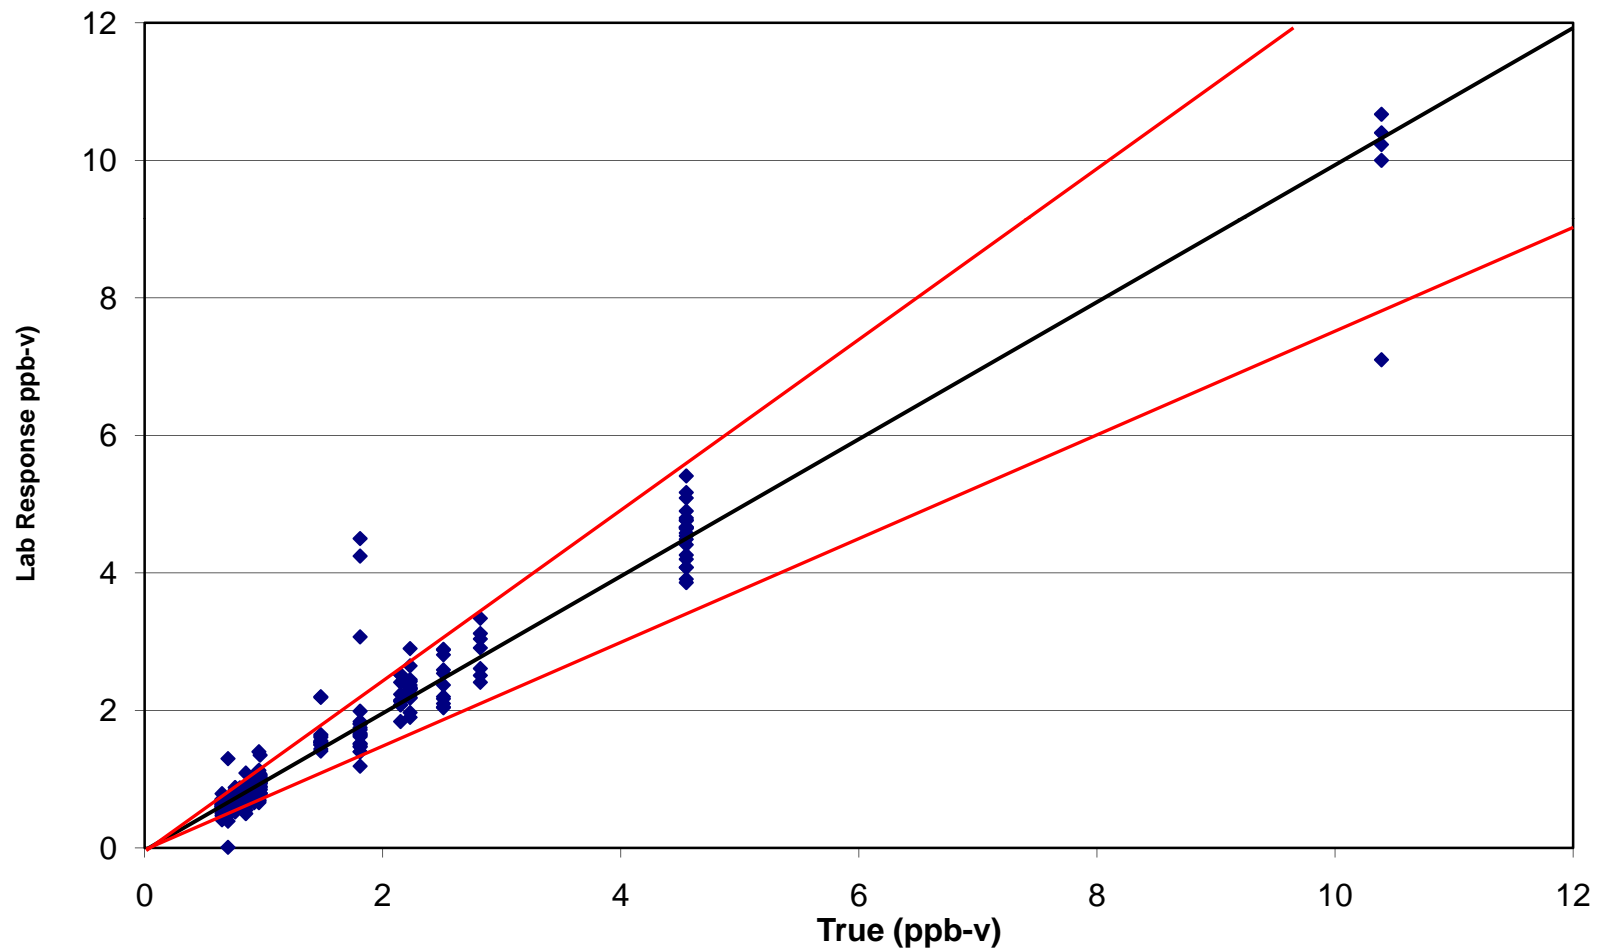

## Meeting Objectives: Data Completeness 2004 – 2008

## Meeting Objectives: Proficiency Testing: Arsenic 2004- 2009

## Meeting Objectives: Proficiency Testing: Benzene 2004- 2009

## Meeting Objectives: Proficiency Testing: 1, 3 Butadiene 2004- 2009

## Meeting Objectives: Proficiency Testing: Formaldehyde 2004- 2009

## Meeting Objectives: Acrolein PT Results 2006 - 2009

## Summary: Is the Program Able to Meet the DQOs?

### ✓ Yes and No

- ✓ The data completeness (2007-2008) is above the required 85% good job everyone!
- ✓ Overall precision data illustrates that we are not meeting a CV of less than 15% with the exception of Arsenic
- ✓ The mean MDLs data illustrates that we are not meeting our MQO for detectability with the exception of Arsenic
- ✓ The laboratories are meeting the 25% bias requirement

Take Home Message: We now have a realistic view of the quality of Air Toxics data - This will guide us in the formulating new Data Quality Objectives
