Air Toxics Ambient Monitoring

National Air Toxics Trends Station (NATTS) Network

M.N. Jones, OAQPS/AQAD

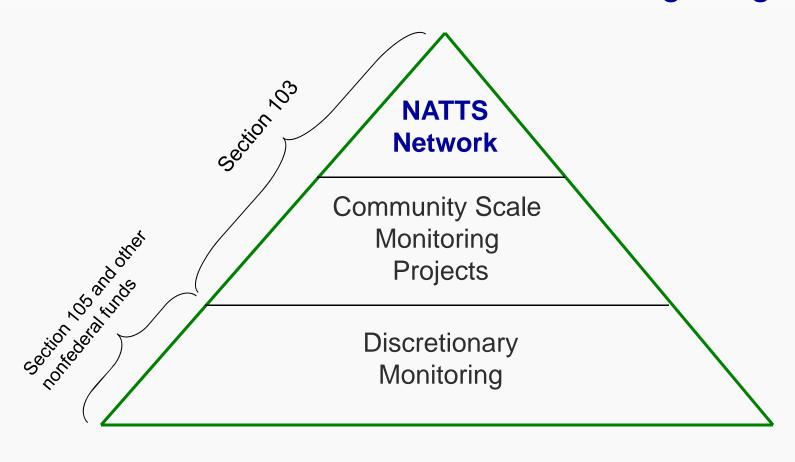

Agenda

- ✓ Program Overview
- **✓** NATTS
 - Overview
 - Data Reporting Assessment
 - Network Assessment
- √ Conclusion

National Air Toxics Ambient Monitoring Program

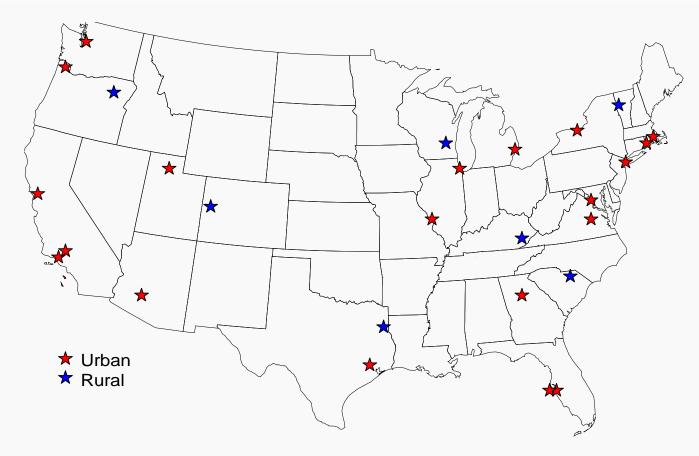

NATTS Objectives / Data Uses

- ✓ Provide quality assured, standardized ambient data
 - Identify and assess trends / program progress
 - Ground truth air quality and human exposure models
 - Direct input into source-receptor models
 - Assess exposure and risk

NATTS Network

U.S. Environmental Protection Agency

Minimum Required NATTS Analytes

VOCs

Acrolein

Benzene

Chloroform

1,3-butadiene

Vinyl Chloride

Perchloroethylene

Carbon Tetrachloride

Trichloroethylene

1,2-dichloropropane

Dichloromethane

Carbonyls

Formaldehyde

Acetaldehyde

PAHs

Benzo(a)pyrene

Naphthalene

PM10 Metals

Nickel compounds

Arsenic compounds

Cadmium compounds

Manganese compounds

Beryllium compounds

Lead compounds

TSP Hexavalent Chromium

Other Key Requirements

- √ Sampling
 - 1 in 6 day frequency
 - o 10% field blanks
- ✓ Analysis
 - Specific methods and target MDLs
 - 10% replicate analyses
- ✓ Reporting
 - Data to AQS within 120 days
 - Data below MDL

Data Reporting Assessment: What We Did

- ✓ In anticipation of network assessment, OAQPS conducted data "pre-screen" (Data Reporting Assessment)
 - Data retrieval
 - Nineteen required analytes
 - All NATTS (2003 2009)
 - Assessed
 - Requisite data present
 - MDLs
 - Data completeness
 - Data censoring, flagging, etc.

Data Reporting Assessment: What We Found

- ✓ Most sites monitored / reported for all requisite HAPs
- ✓ Data completeness generally good
- ✓ Data censoring not prevalent
- ✓ Data flagging spotty / inconsistent
- ✓ MDLs
 - Not everyone reports them
 - o Good news: significant improvement with time

Method Detection Limits

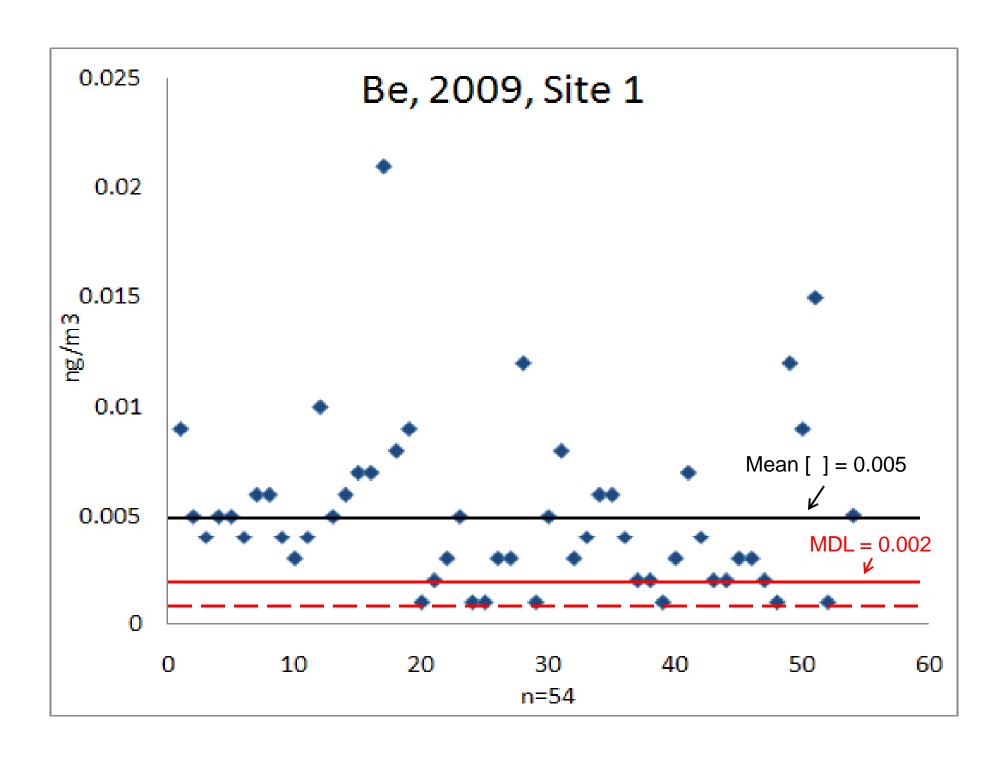

"... the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero..."

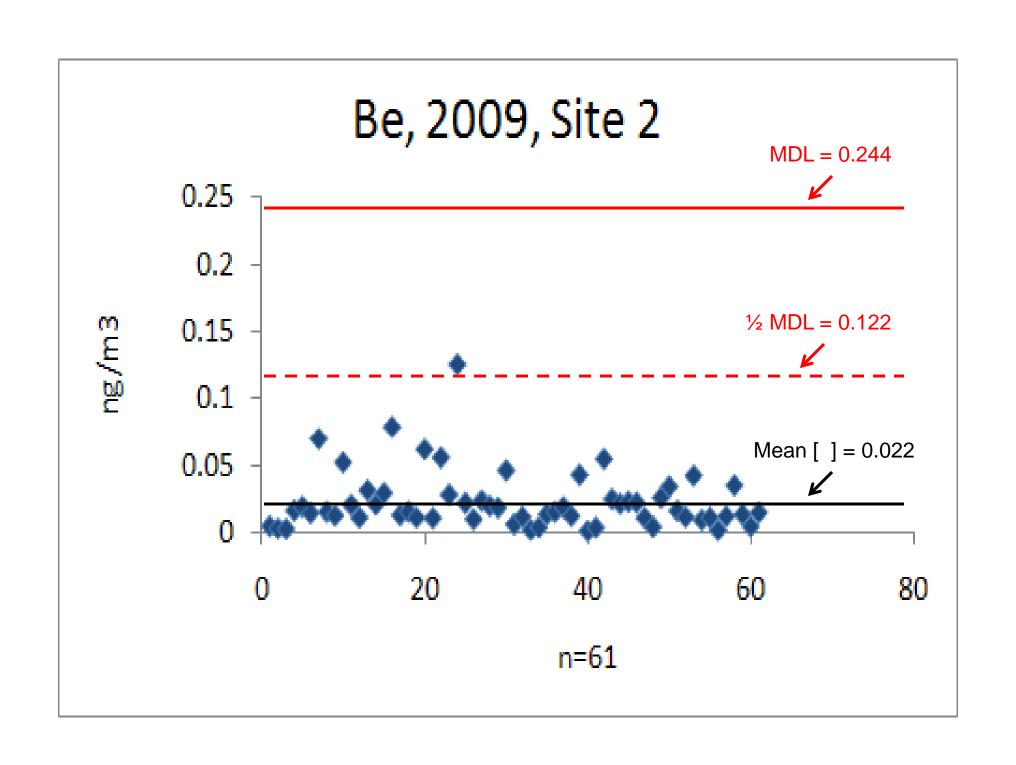

40 CFR Appendix B to part 136

Method Detection Limit (MDL) Development and Standardization

Julie Swift, ERG, 2009 National Ambient Air Monitoring Conference

http://www.epa.gov/ttnamti1/files/2009conference/swift.pdf

Network Assessment

"... structured evaluation of a monitoring network to determine if the goals and objectives for that network are being met..."

National Ambient Air Monitoring Strategy, Section 5, Pg 5-1

"... the NATTS must be evaluated, and modified as needed, on 6-year intervals to assure continued relevancy..."

National Ambient Air Monitoring Strategy - Air Toxics Component, Section 1, Pg 6

Network Assessment - Process

- ✓ Assessment will include data through 2010
- √ All 2010 data in AQS by 3/31
- ✓ OAQPS data retrieval on 4/1
- ✓ Data verification by 5/2
- ✓ OAQPS provides data to contractor
 - Network assessment begins
- ✓ Assessment structured as series of discreet steps
 - o Interim deliverables

Network Assessment – Focus Areas

- ✓ Degree to which network has met stated goals and objectives?
- ✓ Continued relevance of network goals and objectives?
 - Optimal for addressing current and projected program priorities / data needs?
 - o If not, revised goals and objectives?
- ✓ Adequacy of number and location of sites?
 - Appropriate geographic distribution and urban / rural mix?
 - Appropriately sited for urban- or rural-scale representativeness?

Conclusions

- ✓ Greatest challenge: achieving consistency
 - Data comparability directly related to utility
- ✓ NATTS making progress
 - Kudos to the NATTS state and local agencies
- ✓ Still have work to do
 - Data reporting and network assessments will further the progress
