

Amendment No. 1 to Final Report No: MR-13/100

Study Title

Analytical method 01373 for the determination of BCS-CL73507 and the metabolites BCS-CQ63359, BCS-CR60014, BCS-CR74541, BCS-CU81055, BCS-CT30673 and BCS-CU81056 in soil and sediment by HPLC-MS/MS

Test Item

BCS-CL73507, BCS-CQ63359, BCS-CR60014, BCS-CR74541,
BCS-CU81055, BCS-CT30673 and BCS-CU81056

Data Requirements

- Regulation (EC) No 1107/2009 of the European Parliament and the Council of 21 October 2009 concerning the placing of plant protection products on the market and repealing Council Directives 79/117/EEC and 91/414/EEC
- European Commission Guidance Document for Generating and Reporting Methods of Analysis in Support of Pre-Registration data Requirements for Annex II (part A, Section 4) and Annex III (part A, section 5) of directive 91/414, SANCO/3029/99 rev. 4, 11/07/00
- Guidance document on residue analytical methods, SANCO/825/00/rev. 8.1, European Commission, Directorate General Health and Consumer Protection 16/11/2010
- US EPA Residue Chemistry Test Guideline OCSPP 860.1340: Residue Analytical Method

Bayer CropScience AG
BCS-R&D-D-HS-RA

Study ID: MR-13/100
Amendment No. 1 to Final Report
Page 5 of 14

Reasons for the Amendment:

Correction of the used solvent mixture for fortification standard solutions and calibration standard solution. In the original report in the chapters 4.3.3, 4.3.6 and 5.7 the description of the used solvent was incorrect. The corrections are highlighted in ***bold and italic***.

OLD:

4.3.3 Fortification Standard Solutions

Secondary standard solutions were prepared from the stock solutions by dilution with acetonitrile/water/acetic acid (920/80/1; v/v/v).

Table 5: Preparation Scheme for Fortification Standards.

5.7 Stability in Standard Solutions

The stability of BCS-CL73507, BCS-CQ63359, BCS-CR60014, BCS-CR74541, BCS-CU81055, BCS-CT30673 and BCS-CU81056 in standard solutions was tested. The solutions were prepared in acetonitrile, acetonitrile/water (4/1, v/v) or in acetonitrile/water/acetic acid (920/80/1; v/v/v).

For this purpose aged standard solutions were quantified against freshly prepared standard solutions. The aged solutions were stored in volumetric flasks in the dark in a refrigerator at $4^{\circ}\text{C} \pm 3^{\circ}\text{C}$ until analysis.

The target value is at maximum a 6.8 percent degradation (calculated from the means) of the aged solutions.

5.7 Stability in Standard Solutions

The stability of BCS-CL73507, BCS-CQ63359, BCS-CR60014, BCS-CR74541, BCS-CU81055, BCS-CT30673 and BCS-CU81056 in standard solutions was tested. The solutions were prepared in acetonitrile, acetonitrile/water (4/1, v/v) or in ***water/acetonitrile/acetic acid (920/80/1; v/v/v)***.

For this purpose aged standard solutions were quantified against freshly prepared standard solutions. The aged solutions were stored in volumetric flasks in the dark in a refrigerator at $4^{\circ}\text{C} \pm 3^{\circ}\text{C}$ until analysis.

The target value is at maximum a 6.8 percent degradation (calculated from the means) of the aged solutions.

Study Title

Analytical method 01373 for the determination of BCS-CL73507 and the metabolites BCS-CQ63359, BCS-CR60014, BCS-CR74541, BCS-CU81055, BCS-CT30673 and BCS-CU81056 in soil and sediment by HPLC-MS/MS

Test Item

BCS-CL73507, BCS-CQ63359, BCS-CR60014, BCS-CR74541,
BCS-CU81055, BCS-CT30673 and BCS-CU81056

Data Requirements

- Regulation (EC) No 1107/2009 of the European Parliament and the Council of 21 October 2009 concerning the placing of plant protection products on the market and repealing Council Directives 79/117/EEC and 91/414/EEC
- European Commission Guidance Document for Generating and Reporting Methods of Analysis in Support of Pre-Registration data Requirements for Annex II (part A, Section 4) and Annex III (part A, section 5) of directive 91/414, SANCO/3029/99 rev. 4, 11/07/00

2 Introduction and Objective

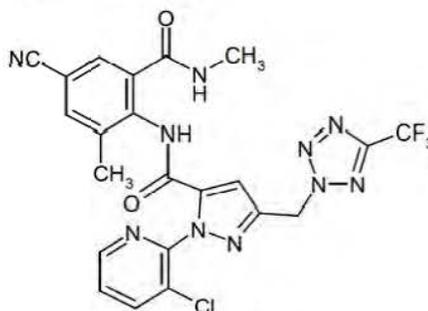

The objective of the study was to validate the analytical method 01373 for BCS-CL73507 and the metabolites BCS-CQ63359, BCS-CR60014, BCS-CR74541, BCS-CU81055, BCS-CT30673 and BCS-CU81056 in soil, the determination of the specificity, recovery experiments including repeatability, linearity of the detector, blank values of untreated control samples, determination of the stability of residues in extracts and the stability of standard solutions.

3 Compounds

3.1 Reference Items

Generally, only sufficiently characterized and certified substances were used as reference items.

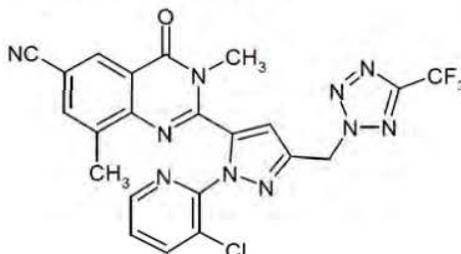

- Name of the Compound **BCS-CL73507**
- Batch Number BCS-CL73507-PU-02
- Certificate of Analysis AZ 18074, dated 2012-07-18
- Structure

- Chemical Name 1-(3-chloropyridin-2-yl)-N-[4-cyano-2-methyl-6-(methylcabamoyl)phenyl]-3-[[5-(trifluoromethyl)-2H-tetrazol-2-yl]methyl]-1H-pyrazole-5-carboxamide
- CAS Registry No. 1229654-66-3
- Empirical Formula $C_{22}H_{16}ClF_3N_{10}O_2$
- Molar Mass 544.88 g/mol
- Purity 97.9%
- Expiry Date 2014-07-12

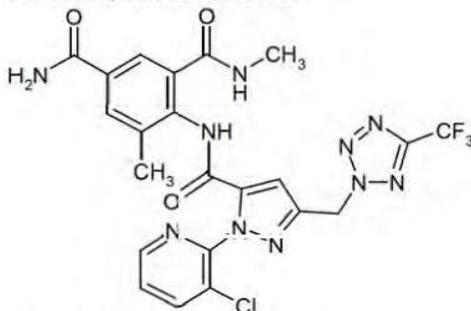

Bayer CropScience AG

4 Experimental Section

4.1 Test System

The method was validated using the three German soils Höfchen, Dollendorf and Laacher Hof and sediment OECD 218/219. Three different soils were used in order to assess a possible influence of different soil characteristics. The soil samples were classified according to DIN and/or USDA specifications. Soil characteristics of the used soils are summarized in [Table 2](#) and [Table 3](#).

Table 2: Soil Characteristics

	Soil Höfchen	Soil Dollendorf	Soil Laacher Hof
Description	Plot 4011; 0-30 cm soil layer	ID 20100423 0-20 cm soil layer	Plot 712/718; 0-30 cm soil layer
pH (in CaCl ₂ solution)	6.7	7.3	6.8
pH (in H ₂ O)	7.4	7.4	7.4
Organic Carbon [%]	0.92	5	1.20
Organic Matter [%] *	1.58	8.6	2.06
Cation Exchange Capacity [meq / 100 g dry soil]	12.4	20.6	9.8
max. Water Holding Capacity [g / 100 g dry soil]	39.5	79.1	37.9
Textural Description according to USDA [Fraction %]	Fraction [%]	Fraction [%]	Fraction [%]
Clay (<0.002 mm)	19.4	31	12.0
Silt (0.002-0.050 mm)	76.3	38	18.3
Sand (0.050-2.000 mm)	4.3	31	69.7
Soil type	Silt loam	Clay loam	Sandy loam

* Organic matter = Organic carbon x 1.72

Table 3: Sediment Characteristics

	Sediment
Description	OECD 218/219
Peat	4 %
Kaolin	20 %
Quartz sand	75 %
Calciumcarbonat	1 %

4.2 Safety

The German guidelines for laboratories of the Employees' Liability Insurance Association, e.g. Working Safely in Laboratories [4] or comparable guidelines in other countries should be observed.

The following chemicals were used, which are classified by the hazardous material regulations. The classification is based on the Globally Harmonised System (GHS) [5].

	Signal word	Hazard statements
Acetonitrile	Danger	H225 Highly flammable liquid and vapour. H302 Harmful if swallowed. H312 Harmful in contact with skin. H319 Causes serious eye irritation. H332 Harmful if inhaled
Acetic acid	Danger	H226 Flammable liquid and vapour. H314 Causes severe skin burns and eye damage.
Formic acid	Danger	H226 Flammable liquid and vapour. H314 Causes severe skin burns and eye damage.
BCS-CL73507 BCS-CQ63359 BCS-CR60014 BCS-CR74541 BCS-CU81055 BCS-CT30673 BCS-CU81056	Warning	Caution – not fully tested yet

The pertinent safety instructions must be observed when working with all compounds mentioned in this method.

4.4 Sample Preparation

Extraction Procedure

1. Weigh 20 g of the soil sample into a 100-mL wide neck glass jar with screw cap containing a magnetic bar.
REMARK: For recoveries add standard solution in the appropriate height for the corresponding fortification level.
2. Add 40 mL of a mixture of acetonitrile/water/acetic acid (4000/1000/30, v/v/v).
3. Half close the 100-mL wide neck glass jar.
REMARK: Do not really close the bottle to avoid pressure build up.
4. Place ten jars with soil-solvent mixture into the microwave extractor.
5. Switch on the magnetic stirrer.
6. Extract for 15 minutes: From 0-3 minutes at 400 W (ambient temperature to 60°C) and from 3-15 minutes at 110 W (60°C).
7. Add 200 µL of internal standard solution 13-ISTD_3506 and homogenize.
8. Let the sample cool down to ambient temperature.
9. If needed centrifuge for 5 minutes at >12000 g to remove fine particles of soil.
10. Transfer an aliquot of 0.1 mL into a round bottom tube and add 0.9 mL acetic acid 0.1% and homogenize.
11. Centrifuge for 5 minutes at 13500 g and 5°C to remove fine particles of soil.
12. Determine by liquid chromatography and MS/MS.

4.5 Instrumental Analysis

4.5.1 Principle of Measurement

An aliquot of the sample solution was injected into the high performance liquid chromatograph and subjected to reversed phase chromatography coupled with tandem mass spectrometry (MS/MS) with electrospray ionisation. The MS/MS instrument was operated in the Multiple Reaction Monitoring mode (MRM). The pseudomolecular ions of the analytes ($[M+H]^+$, $[M-H]^-$ or any adducts) were selected by the first quadrupole. These precursor ions were impulsed with nitrogen in the collision cell (second quadrupole) and the resulting fragment ions (product ions) were separated according to their m/z ratio in the third quadrupole. Two of these product ions per analyte were selected: one product ion (MRM-transition) serving for quantitation and the second for confirmation.

Page 31 (155)

4.5.2 Variations in Instrument Conditions

Variations in equipment or sample characteristics and/or deterioration of system performance may require slight modifications in the chromatographic or detector conditions listed in order to obtain adequate chromatographic peak shapes or sensitivity. Instrument parameters and mobile phase may be adjusted to improve separation from unexpected interfering peaks.

Therefore, the given LC/MS/MS parameters listed may require adaptation.

Report: MR-13/100
Page 32 (155)**4.5.4 Detection**

The detection by MS/MS was performed on a triple-quadrupole tandem mass spectrometer, equipped with a Turbo IonSpray (ESI) interface operated in positive ion mode and multiple reaction monitoring (MRM). Unit mass resolution was established and maintained in the mass resolving quadrupoles by maintaining a full width at half-maximum (FWHM) of about 0.7 amu. Optimal collisionally-activated dissociation (CAD) conditions for fragmentation of the pseudomolecular ions of the analytes and the corresponding matrix matched standards were applied with nitrogen as the collision gas.

Detector: Triple Quadrupole Tandem Mass Spectrometer, Applied Biosystems MDS Sciex API 6500, Windows 7, Analyst 1.6.2 software versions or any equivalent HPLC-MS/MS System

Interface: Turbo IonSpray (ESI) Gas Temperature: 400°C or as needed for the sensitivity

Scan Type: MRM (Multiple Reaction Monitoring)

4.6 Calculation

The example calculation displayed below was used by the laboratory developing this method. Alternate calculation procedures appropriate to the reporting requirements may be substituted.

4.6.1 Calculation of Individual Residues and Recovery Rates using Linear Regression

For calculation of the concentrations, calibration curves were used. These curves were calculated automatically after each sequence run with the Applied Biosystem quantitation software Analyst (Version 1.6.2) using linear regressions. Further calculations were performed using the software EXCEL 2010 (Office 2010®). The quadratic equation is expressed as:

$$y = \text{Intercept} + \text{Slope} \times x$$

By means of the linear equation, the content of trifloxystrobin in wet soil or recoveries can be calculated as follows:

Area Analyte / Area Internal Standard	y	
Standard Concentration / Internal Standard Concentration	x	[(µg/L) / (µg/L)]
Sample Weight	G	[kg]
Fortified Amount	A	[µg]
Extraction Volume	VEXT	[L]
Aliquote	VALI	[L]
Final Volume	VEND	[L]
Internal Standard Concentration	STI	[µg/L]
Residue in wet Soil (only for residue samples)	R	[µg/kg]
Recovery	Rec	[%]

$$R = \frac{y - \text{Intercept}}{\text{Slope}} \times \text{STI} \times \frac{\text{VEND} \times \text{VEXT}}{\text{VALI} \times G} \quad \text{Rec} = \frac{y - \text{Intercept}}{\text{Slope}} \times \text{STI} \times \frac{\text{VEND} \times \text{VEXT}}{\text{VALI} \times A} \times 100\%$$

Example for a calculation for a BCS-CL73507 recovery 5 µg/kg in soil Höfchen (Rec Höfchen 1):

Area Analyte / Area Internal Standard	y	11517 / 28048
Sample Weight	G	0.02 kg
Fortified Amount	A	0.04 µg
Extraction Volume	VEXT	0.04 L
Aliquote	VALI	0.0001 L
Final Volume	VEND	0.001 L
Internal Standard Concentration	STI	0.25 µg/L
Recovery	Rec	91%
Intercept		0.0509
Slope		0.99

$$\text{Rec} = \frac{\frac{11517}{28048} - 0.0509}{0.99} \times 0.25 \times \frac{0.001 \times 0.04}{0.0001 \times 0.04} \times 100\% = 91\%$$

5.8 Confirmatory Method (contd.)

For confirmation of the individual residues a 2nd mass transition was used. Results of the confirmation procedure showed that the overall mean recovery rates for BCS-CL73507, BCS-CR60014, BCS-CR74541, and BCS-CU81055 were between 70 to 110%. The overall RSD were below 20% for all soils tested. For BCS-CQ63359, BCS-CU81056, and BCS-CT30673 the sensitivity of the instrument for the fortification level at the LOQ of 2 µg/kg was not given. For the fortification level of 20 µg/kg the recovery rates were between 70 to 110%.

Appendix 1: Method Characteristics

Table 56: Summary Parameters for the Analytical Method Used for the Quantitation of [Chemical] Residues in [Matrices]. (DER TABLE B.1.1).

Method ID	01373	
Analyte(s)	BCS-CL73507, BCS-CQ63359, BCS-CR60014, BCS-CR74541, BCS-CU81055, BCS-CT30673 and BCS-CU81056	
Extraction solvent/technique	acetonitrile/water/acetic acid (4000/1000/30, v/v/v) Shaker	
Cleanup strategies	Extraction followed by centrifugation	
Instrument/Detector/Column	Agilent 1290 LC AB Sciex API6500 LC- MS/MS YMC Ultra HT Hydrosphere C18, 2µm, 12 nm, 30 x 2.00 mm i.d.	
Standardization method	linear regression	
Retention time	BCS-CL73507 / BCS-CL73507 ISTD	approx. 1.9 min
	BCS-CQ63359 / BCS-CQ63359 ISTD	approx. 2.5 min
	BCS-CR60014 / BCS-CR60014 ISTD	approx. 1.3 min
	BCS-CR74541 / BCS-CR74541 ISTD	approx. 1.6 min
	BCS-CU81055 / BCS-CU81055 ISTD	approx. 1.5 min
	BCS-CT30673 / BCS-CT30673 ISTD	approx. 2.1 min
	BCS-CU81056 / BCS-CU81056 ISTD	approx. 1.9 min

Appendix 2: Apparatus and Reagents

Apparatus

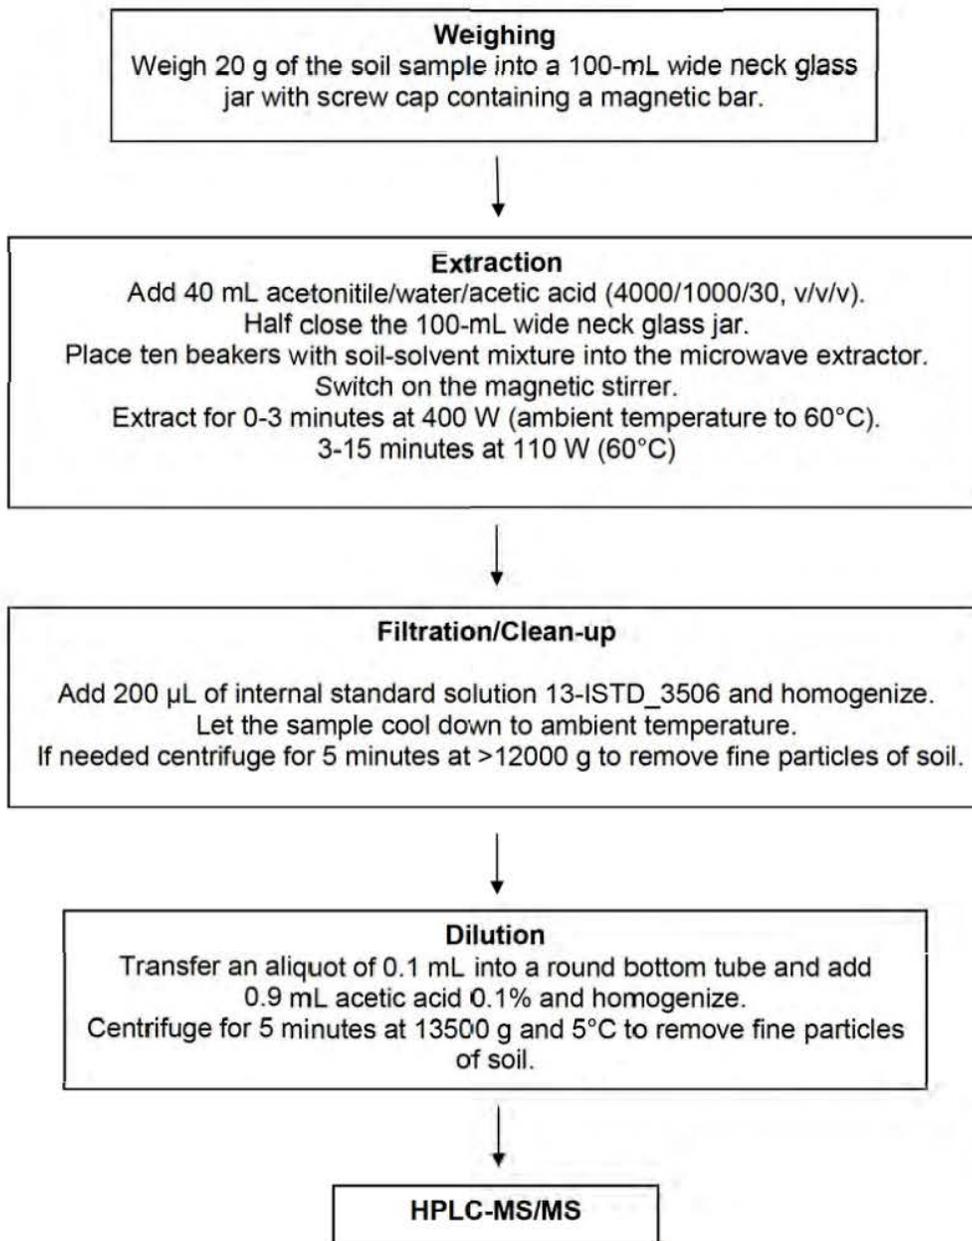

- Liquid chromatograph, Agilent 1290 Binary Pump, Agilent 1260 Isocratic Pump, Agilent Technologies, Böblingen, Germany or equivalent
- Hot Pocket Column Oven standard version, short, Thermofisher or equivalent
- Autosampler, HTC PAL, CTC Analytics, Switzerland or equivalent
- Mass spectrometer, API 6500 with ESI interface and mass spectrometric detector, Applied Biosystems, Darmstadt, Germany or equivalent
- Microwave, MLS-Ethos or equivalent
- Horizontal Shaker, SM 30, Edmund Bühler GmbH or equivalent
- Allegra X-15 Centrifuge or equivalent
- Fresco 21 Centrifuge or equivalent
- Reversed phase chromatography column, YMC Ultra HT Hydrosphere C18, 2 μ m, 12 nm, 30 x 2.00 mm i.d. or equivalent
- Volumetric flasks
- Variable dispenser, 50-mL
- Wide neck glass jars, 100-mL with caps
- Thermo Scientific Novous pipettes, 300 - 1000 μ L and 30 - 300 μ L
- Small instruments, e.g. Pasteur pipettes, autosampler vials, Uniprep tube

Reagents

- Methanol for Residue Analysis, LGC Standards GmbH, D-46485 Wesel, Germany or equivalent
- Acetonitrile for Residue Analysis, LGC Standards GmbH, D-46485 Wesel, Germany or equivalent
- Water, HPLC grade, purified with a Milli-Q-water system, Millipore Co., Eschborn, Germany or equivalent
- Formic acid, Suprapur, Merck KGaA, Darmstadt, Germany or equivalent
- Nitrogen 5.0, 99.9990% purity, as bath, nebulizer, collision, curtain, and turbo gas, Linde AG, Höllriegelskreuth, Germany or equivalent

Page 63 (155)**Appendix 4:**
**Detailed Summary of Chromatographic and
Mass Spectrometric Conditions Quantifier**

Solvent A Binary Pump: Milli-Q-water
+ 1.0 mL/L formic acid
Solvent B Binary Pump: Acetonitril
+ 1.0 mL/L formic acid
Isocratic Pump: Methanol + Water (4+1; v+v)
Column: YMC-UltraHT Hydrosphere C18, 2 µm, 12nm, 30 x 2.00mm i.d.
Oven: HOT POCKET Column Oven standard version, short (Thermofisher)
Oventemp.: 40°C
Inject 10 µL into a 5 µL injection loop.

Comment:
Synchronization Mode: LC Sync
Auto-Equilibration: Off
Acquisition Duration: 4min30sec
Number Of Scans: 760
Periods In File: 1
Acquisition Module: Acquisition Method
Software version: Analyst 1.6.2

MS Method Properties:
Period 1:

Scans in Period: 760
Relative Start Time: 0.00 msec
Experiments in Period: 1

Period 1 Experiment 1:

Scan Type: MRM (MRM)
Scheduled MRM: No
Polarity: Positive
Scan Mode: N/A
Resolution Q1: Unit
Resolution Q3: Unit
Intensity Thres.: 0.00 cps
Settling Time: 0.0000 msec
MR Pause: 5.0000 msec
MCA: No
Step Size: 0.00 Da
