#### 1.0 Executive Summary

This investigation was performed to identify Potential Remediation Partners (PRPs) that may be recruited to participate in activities associated with remediating contaminated sediments. Contaminated sediments in the Detroit River have been identified as a significant contributor to impairments to beneficial uses (BUIs). The target of the investigation was to identify non-Federal entities that may have engaged in activities that could have contributed to the contaminated sediments or that may have a direct interest in particular areas of the Detroit River. The objective of the investigation is to identify PRPs that may have interest in participating in a Great Lakes Legacy Act project.

Harbortown Site is the northern most of six targeted areas located along the Detroit River Area of Concern (AOC) identified for possible contaminated sediment remediation. The targeted area extends from the center of Detroit upstream (eastward) to the MacArthur Bridge. The area between roughly what is now Jefferson Avenue and the river front was the site of intensive industrial activity from the early 1800s until the mid-1900s. Before this time period, Detroit was a garrison town, fur trading center and farming community. After the mid-1900s, industry left the area and it has been largely commercial or unused until recent redevelopment efforts. The focus of inquiry was the industrial period to identify entities that may have discharged contaminants of the type and at quantities that could exist in sediments today. Industry located along the Detroit River commonly discharged untreated process waste water directly into the river for most of this period and combined sewer overflows may continue to contribute contaminants occasionally.

The primary sources identified are the Detroit-Michigan Stove Company (Welbilt), Uniroyal Tire Plant (Michelin), Detroit City Gas Company Coal Gasification Plant (DTE), Michigan Ammonia Works (DuPont), and Berry Brothers Paint & Varnish Plant (no successor identified). However, there were a lot of other industrial dischargers that have contributed to existing river sediments. Each of these other entities, taken individually may not represent a significant contributor of contaminants (by volume), but collectively they are significant. The many casting, machining, tool, boiler, pump, engine, railcar, wheel, automobile body, boat, ship, parts, and bits manufacturing enterprises all discharged waste water containing contaminants like those identified in existing river sediments. There were also discharges from major entities that may have resulted in significant quantities of contaminants, but not of the type identified in river sediments. These included breweries and pharmaceutical companies.

Further, linkage to both **GM** and **FCA** as early dischargers can be established for both organizations, both have continued presence in Detroit and the immediate Harbortown area which may induce participation. The GM Headquarter at the Renaissance Center just west of target area and FCA has a major manufacturing center just east of the Harbortown area.

Other existing and viable entities including BorgWarner, Konecrane, Alcoa, Pentair, and Fives have been identified through succession as linked to manufacturing activities that discharged waste water to the Detroit River. None are currently present or active in the Harbortown area and those that have remained in the greater metropolitan Detroit area do not appear able to provide significant participation.

#### 2.0 Introduction

The Great Lakes are one of the most important natural resources in North America. Contamination from urban development, agricultural run-off, and industrial activity over the years has adversely affected water quality. Several areas within the Great Lakes where resources have limited beneficial uses have been designated as Areas of Concern (AOCs).

Congress authorized the Great Lakes Restoration Initiative (GLRI) to leverage clean-up of Great Lakes AOCs and restore beneficial uses. Under GLRI is the Great Lakes Legacy Act (GLLA), a program to address contaminated sediments in Great Lakes AOCs.

To date, 20 GLLA projects have been completed throughout the Great Lakes. Over 4 million cubic yards of sediment at twenty sites have been cleaned-up providing significant water quality improvement around the Great Lakes. The program has leveraged over \$266M from States, Industries, and Natural Resource Damage Assessments.

Congress created GLLA as a cost-share program. All GLLA projects must involve the participation of non-federal sponsor(s) or partner(s) contributing a minimum 35% of the overall response action. Participation can be through contributions of cash or like kind service.

US EPA has worked with over 37 industries and a variety of other non-Federal partners so far on GLLA projects throughout the Great Lakes.

The Detroit River is a Great Lakes AOC. A key concern driving impairments to beneficial use of the Detroit River is contaminated sediments.

The Michigan Department of Environment, Great Lakes and Energy (EGLE) in cooperation with US EPA Great Lakes National Program Office (GLNPO), and Detroit River Public Advisory Committee (PAC), initiated an effort to define "known contaminated sediment sites" in the Detroit River. From 2013-2016, USEPA GLNPO completed five contaminated sediment site characterizations within the Detroit River (Figure 1) in areas identified by the PAC. The effort resulted in the delineation of six "sediment target sites". The target sites are identified as: Harbortown; Riverbend; River Rouge/Ecorse Shoreline; McLouth/Grosse Ile Shoreline; Elizabeth Park Canal; and, Gibraltar Canals.

This report addresses the Harbortown Site (Figure 2) and is intended to identify entities that have or had a presence in the area and may have contributed sediments in the Detroit River. Many have benefited over the years from use of the natural resource provided by the Detroit River. These entities may be potential partners in addressing sediment issues in the Detroit River. Participation is strictly voluntary. Additional information on the GLLA can be found on the EPA website at

https://www.epa.gov/great-lakes-legacy-act/about-great-lakes-legacy-act

#### 3.0 Methodology

This investigation is performed to identify Potential Remediation Partners (PRPs) that may be recruited to participate in activities associated with remediating contaminated sediments. Contaminated sediments in the Detroit River have been identified as a significant contributor to beneficial use impairments (BUIs). The target of the investigation is to identify non-Federal entities that may have engaged in activities that could have contributed to the contaminated sediments or that may have a direct interest in particular areas of the Detroit River. The objective of the investigation is to identify PRPs that may have interest in participating in a Great Lakes Legacy Act project.

This investigation is conducted by reviewing existing data and information identified through available sources. References are included in Section 8 of this report. No new data is created through site investigations, sampling or analytical work by this effort. Digital records are the primary source of data and information, supplemented with printed material that may be identified during the course of the investigation. Professional judgment is used to evaluate the relevance of data and information in identifying PRPs. The review methodology involves a process to identify and collect information that generally progresses as follows;

- The target area of sediment contamination is identified within the AOC. Information is obtained describing the general volume and character of the sediment contamination. This information is made available by USEPA, State partners, and other team members that may be involved at the initial stage of the investigation. Other relevant information and/or anecdotal observations that might suggest avenues of further inquiry are often provided at initiation of the investigation. Sediment characterization reports are valuable in identifying specific contaminants and the types of activities that may have generated them.
- Web-based open-source mapping (e.g. Google Maps, Yahoo Maps, MapQuest, Bing Maps, National Geographic Maps) of the target area is reviewed with both street map and satellite imagery. These maps are useful in identifying current land use and entities adjacent to the target area.
- A preliminary web search is performed for entities identified during the investigation initiation and open-source map searches. Web sites often exist that contain information on the nature of activities performed by the entity at the site, history of the entity and site activities, key operating personnel, contact information, financial status, community and environmental principles, prior site owners, and more. This information may be useful in evaluating the entity's potential contribution of contaminants to sediments and viability as a PRP.
- A search area is designated adjacent to the target sediment area that is reasonably likely to have (or had) entities that could have contributed contaminants. An electronic data searching service (i.e. EDR) is engaged to locate and provide information on all entities within the designated search area with an environmental record or 'foot-print'. Virtually all publically searchable data bases maintained by Federal, State, Tribal and Local

environmental jurisdictions are searched to identify entities that have a record of air, water, waste, and/or environmental management activities within the designated search area. See Figure 3 EDR Corridor Report (presented at the back of this report because of its size) for search results related to the Harbortown Area and a complete listing of government data bases searched (Page GR-1). Further, EDR maintains several proprietary data bases with environmental information to supplement the public data base searches. These records are useful in identifying entities, the nature of their activities and sometimes contact information. It is often the case that hundreds or even thousands of records are identified. In this particular case, 972 pages of environmental records were identified. Professional judgment is used to screen out those entities that have minimal potential as candidate PRPs. Follow-on web searches for the remaining identified entities are often performed to obtain additional information to support evaluations of the candidate PRPs.

- In addition to data files, historical imagery is used to supplement information on the search area. Historical aerial photos, topographic maps and Sanborn Fire Insurance Maps are provided in digital format often from the early 1900's to present. See Figure 4 (presented at the back of this report because of its size) for aerial photographs of the search area from 1937 through 2016 (30 photos). Results of the Sanborn Map (presented at the back of this report because of its size) search may be found in Figure 5. These images can be useful in evaluating land use over time and may indicate entities not captured in the data records.
- Professional judgment is used to evaluate all identified entities. Evaluation criteria include 1) does the nature of the entities activities suggest they could have contributed contaminants to the sediments, 2) Is it possible that activities could have generated volumes of contaminants for a duration that could represent a significant contribution to the existing sediments, 3) Does the entity (or successor entity) exist now, and 4) Does the entity appear to possess the resources (financial or other) needed to contribute to remediation activities. The evaluation criteria are informed by further web searches of entity sponsored sites, news articles, library sites, trade association sites, and others.
- A final evaluation is performed to assess a candidate PRP's likelihood to participate. This is largely based on professional judgment and informed by the entity's environmental track record, stated environmental and community commitments, apparent availability of necessary resources, and potential for independent response liability.

#### 4.0 History of each site a/ b/ c/ d/ e/ f/ g/ b/

This project involved evaluation of six targeted areas located along the Detroit River Area of Concern (AOC) identified for possible contaminated sediment remediation. The targeted area extends from the center of Detroit upstream (eastward) to the MacArthur Bridge. The area between roughly what is now Jefferson Avenue and the river front was the site of intensive industrial activity from the early 1800s until the mid-1900s. Before this time period, Detroit was a garrison town, fur trading center and farming community. After the mid-1900s, industry left the area and it has been largely commercial or unused until recent redevelopment efforts. The focus of inquiry is the industrial period to identify entities that may have discharged contaminants of the type and at quantities that could exist in sediments today. Industry located along the Detroit River commonly discharged untreated process waste water directly into the river for most of this period and combined sewer overflows may continue to contribute contaminants occasionally.

It is important to understand the history of industrial development in the Harbortown area to identify entities that may have contributed to contaminated river sediments existing today. There remains no active industry in the Harbortown area that could discharge waste water that would significantly contribute to contaminated sediments (except incidental, episodic CSO discharges). However, it is likely that discharges from the past, even distant past, may have contributed significantly to sediments in the river that exist today. Most common predictive flow models have failed to adequately describe contaminant transport in the Detroit River. Inquiries have revealed that typical Detroit River sediments result from larger, heavier particles than most flow models tend to predict. Consequently, discharges of larger, heavier particles along the Detroit River fall out of the water column quicker and would deposit along the bank out of the fast flowing mid-river channel. These sediments would remain until or unless disturbed by dredging.

The location of Detroit as a settlement was selected because of the strategic position controlling water travel between the upper and lower Great Lakes. Also, there were sandy beaches for easy canoe landing, just west of the Harbortown area which was predominantly wetland along the shore all the way to Lake St. Clair. The strategic position played an important role in industrial development. Access to natural resources (iron, copper and timber from the north and coal from the east) via water sparked industrial development. Transportation by water of finished products to markets in the east and west and overseas was also possible during early industrial development before being enhanced and sustained by follow-on railways and roadways.

As industrial development in the city 'ramped-up', it was the relatively undesirable (and cheap) swamp land east of the city along the river front that was first developed (what we are calling the Harbortown area). Initial development was haphazard and chaotic with a largely unplanned mix of lumber mills, tanneries, docks and dry docks, foundries, machine shops, carriage manufacturers, warehouses, ice houses, bars, butcher shops, stables, tobacco, soap and pharmaceutical factories, and residences all co-habiting the same area. The land area required for most of these enterprises was modest at start-up and expanded as they grew and prospered. Some would purchase adjacent plots and expand, others would purchase near-by plots and relocate, still others would move further inland (when roads and railways made this possible). Many would go out of business and be replaced by still other entities. As development

progressed, larger more permanent enterprises emerged. It is the larger industrial enterprises that had the most significant potential of discharging the quantities of contaminants with the characteristics observed in river sediments that are of primary interest here.

There are only four (4) entities that emerge from the history of industrial activity that had the potential of contributing significantly to river sediments existing today; 1) a stove manufacturer, 2) a tire manufacturer, 3) coal gasification and associated chemical processing facilities, and 4) a paint and varnish manufacturer. There are an additional forty-four (44) entities that have been individually evaluated and included here spanning the range of manufacturing activities that existed in the Harbortown area. This is not an exhaustive compilation of all industrial activities that existed in the Harbortown area (there are certainly many more), but rather a representative sampling of the type of entities that have operated over time. In addition, the EDR Area Search digital source review yielded 972 pages of data regarding entities with an environmental record (786 individual records). Further, the records reveal 140 gas stations and 83 dry cleaners with environmental records in the relatively small Harbortown area (a little over 2 mile stretch of river front). Importantly, the sheer number of industrial and commercial entities that have or had the potential of discharging contaminants to the Detroit River is noteworthy (if not necessarily useful in identifying potential remediation partners).

Saw mills were among the first industrial activities in the Harbortown river front area. See Figure 6 for a picture of the river front from the mid-1800s. Records indicate as many as a dozen saw mills were active along this stretch of river front. The saw mills were primarily active during the early to mid-1800s and played a key role in filling the wetlands along the river front. As was the practice during this era, saw mills were constructed on piers extending out over the water. Logs were floated up to the mill, lifted from the water, sawn into lumber, and the cutends and saw dust dropped back into the water. The lumber and cut-slabs (the outer un-usable portion of the log with bark) were conveyed out the back of the mill into the storage yard. Lumber was stacked for drying prior to sale or further machining and the slab was used to fire boilers to provide power to the saw mill (and manufacturing plants). At least one of these saw mills and associated furniture manufacturing (Frost Lumber Works, Lieb & Wight Streets to the river front) continued on until the early 1900s.

Figure 6 – River front at Harbortown area

Great Lakes saw mills typically shipped lumber not used for local construction to east coast cities or Chicago. Not Detroit saw mills. The Detroit saw mills fed the emerging carriage/wagon and ship building industries. During the 1830s to 1850s Michigan saw a large influx of immigrants (mostly from New York and New England) arriving by ship and passing through Detroit on their way inland. The new immigrants had need of wagons to move inland and ships were needed to exploit Great Lakes commerce (iron ore, copper, timber, coal, and passenger). Detroit lumber was used to supply the emerging manufacturing. Among the ship building enterprises was Detroit Dry Dock Company (est. 1852) at the foot of Orleans Street and the river front. Small carriage shops were spread throughout the city.

The need for metal fixtures and components for carriage and ship building became immediately apparent. Iron ore and copper from the Upper Peninsula and coal from the east (Pennsylvania) converged on Detroit. Iron/steel refining and copper smelting facilities were constructed and fed small foundries and metal working enterprises springing up on virtually every street in the Harbortown area. Iron and steel was cast and forged, machined and hardened and copper was cast and combined with tin, zinc, and lead to make bronze and brass for fixtures. There was even some aluminum being cast.

By the mid-1800s sailing ships were being replaced by steam ships and wood hulls were being replaced by metal. The early metal shops transitioned and new enterprises were established to include manufacturing of ship boilers, engines and pumps. Many of these factories were located in the Harbortown area. Most of the saw mills disappeared. Detroit became a major exporter of marine engines and ships (over half of all Great Lakes ships were manufactured in Detroit as well as many ocean going vessels).

Tooling to work metal came into demand and many tool manufacturers were established next to and among the metal working enterprises in the Harbortown area. Tool making remained a significant presence in the Harbortown area well into the mid-1900s. The availability of metals, coal and skilled tradesmen spurred development of other industries, most notably stoves and railcars.

Freestanding cast iron stoves were a major technological breakthrough for home heating and cooking in the mid-1800s. Originally manufactured primarily in New York each weighing hundreds of pounds, shipping to emerging markets in the mid-west made Detroit an ideal location to become a center for stove manufacturing. Two stove manufacturing plants were established and flourished in the Harbortown area; the Michigan Stove Works at Adair and Jefferson and the Detroit Stove Works on Jefferson just west of what's now the MacArthur Bridge to the foot of the river. These factories were established in the mid-1800s, merged to form the Detroit-Michigan Stove Company and continued to operate until the mid-1900s employing thousands of workers and producing millions of stoves.

About the same time that stove manufacturing was taking off, demand for railcars was being addressed by Detroit manufacturers. The established base of foundries and skill tradesmen made Detroit a natural location for manufacturing wheels and undercarriages as well as the many carriage fitting and appurtenances. Combined with the many existing wagon/carriage builders (that transitioned to building boxcars and passenger cars) quickly established Detroit as the center of railcar production in the United States. The Harbortown area was not the center of this activity, but several supporting factories were located along Jefferson Avenue.

The growing population and industries of Detroit from the mid-1800s through the mid-1900s drove a demand for public services. First was the need for potable water. A river water intake and storage tower was constructed at the foot of Orleans Street in the late 1830s to supply drinking water to the city. The resulting indoor plumbing (sinks and toilets) increased consumption of water from 10-15 gallons to over 100 gallons per capita per day. Sewers were quickly constructed to convey waste water directly to the river (or the nearest stream, e.g. Conners Creek). Sewer discharges upstream of the Orleans Street river intake contributed to disease outbreaks in 1832 and 1834 that eventually killed 1/8 of the city's population. In response, a plan was devised to relocate the potable water intake north of Belle Isle (1860), divert sewers to Conners Creek (downstream of the new intake) or the Detroit River, and combine storm water and sanitary sewers. No sewerage treatment was provided. This remained the sewer plan for the next 70-80 years. New and expanded sewers in the Harbortown area went direct to the river, untreated. The river front moved south as the 'swamp' was filled and some (many) sewer discharges that started as surface releases became submerged. In the 1920s, plans were developed to collect city sewers and discharge at a common point to allow for some level of treatment (primarily chlorination for disease control). See Figure 7 for a panoramic view of the Detroit River in 1930<sup>i/</sup> revealing considerable pollution. By 1937 the Detroit River Interceptor (that runs along Jefferson Avenue and collects sewers in the Harbortown area and beyond) was completed, although many of the sewer connections to the interceptor were not opened until the early 1940s. See Figure 8 for an aerial photograph of a sewer discharge just west of the McArthur Bridge during 1937. The Detroit River Interceptor (and other interceptors) convey city sewers to a point by the Rouge River for, initially, rudimentary primary treatment and chlorination prior to discharge to the Detroit River. Importantly, until this occurred, all industrial waste water (Harbortown area and elsewhere) went directly (untreated) to the Detroit River with discharges at the shoreline.

Figure 8 – Sewer discharge into the Detroit River

The other notable public service was lighting. Prior to electricity, gas burning fixtures were used for both public and indoor lighting. The gas was distributed by pipes buried along streets and derived from coal. The primary coal gasification plant serving Detroit was located at (roughly) Jefferson Avenue and Meldrum Street to the foot of the river in the Harbortown area. When electricity became a viable alternative, coal fired electricity generating plants were constructed around the city including one at 24 Atwater Street (by St. Antoine Street). Importantly, coal gasification created several useful by-products including coke, tars, creosol, and distillates. Further refining of coal by-products was performed at the gasification complex including ammonia (for agricultural fertilizer), and naphtha and bitumen or asphalt (used for pavement and Japan Black paint). A major paint and varnish manufacturing enterprise (Berry Brothers Varnish and Paint Company) was established next the coal gasification plant at Lieb and Wight Streets making Japan Black (among other products) and operated for about 100-years at the foot of the river.

There were other significant enterprises located in the Harbortown area over the years. Most notable was tire manufacturing located at 6600 East Jefferson Avenue (between the Detroit-Michigan Stove Works and the Coal Gasification Plant) to the foot of the river. One of the first pneumatic tire manufacturing plants established to provide bicycle tires (Moran-Wright) around 1900 was quickly converted to make automobile tires (Uniroyal) and operated for 75-years and produced tens of millions of tires. Another enterprise was pharmaceutical manufacturing. There

were two noteworthy and significant pharmaceutical manufacturers located in the Harbortown area (Parke-Davis & Company between Jos Campau and McDougall at the river front and Frederick Stearns & Company at 6533 East Jefferson Avenue) that helped to introduced new methods for producing drugs, techniques to standardize doses, and discovered new medicines in research facilities from the mid-1800s to the mid-1900s. There was a beer brewery (Koppitz-Merchers) at 151 Dubois Street at the river front and a cigar factory complex (Globe Tobacco Company) at 29-41 Atwater Street. For a period Detroit was known as the 'Little Havana' because of the prominence of the tobacco businesses.

The first dedicated automobile assembly plant in the United States was built by Ransom E. Olds on Jefferson Avenue and Concord Avenue (near the MacArthur Bridge) and operated for several years before being taken over by Hupp Motors and then King Motors and followed by Wadsworth Manufacturing Company (a 'boutique' manufacturer making a variety of products including steel boats and engines), and finally the site became part of the Uniroyal tire manufacturing complex.

Most, if not all of these entities discharged untreated process waste water directly into the Detroit River. Many of the processes used would involve discharges including oils, greases, and metals. Some could be significant in terms of volume discharged, but for relatively short duration. Others may have resulted in relatively minor discharges over a longer duration. The following describes many of the sources that operated in the Harbortown area throughout the years of industrial activity and provides an assessment of their potential as sediment remediation partners. See Figure 5.5 for the locations of identified potential remediation partners.

#### Welbilt (Detroit-Michigan Stove Company)

Figure 9 – Michigan Stove Company front office and 'Famous' Giant Garland stove

Manufacturing freestanding cast iron stoves for heating and cooking began in Detroit in 1861 in the Harbortown area. Jeremiah Dwyer was the foundry-man responsible for establishing the first stove manufacturing plant at Wight Street and Adiar Street (or Mt. Elliot depending on information source) to the foot of the river. The enterprise took off and relocated to 6900 East Jefferson Avenue (next to what is now the MacArthur Bridge) and was called the Detroit Stove Works. See Figure 10 for images and map plans of both factories. Jeremiah Dwyer left Detroit Stove Works seven years later and returned to his original site at Adair and Jefferson and established the Michigan Stove Company. The two manufacturing plants (and a third, Peninsular Stove Company, not in the Harbortown area), along with another eight or nine smaller enterprises, really established Detroit as the stove manufacturing center of the United States. These two factories produced millions of cast iron furnaces and cook stoves for residential and business uses over the almost 100-years of operation. The stoves were originally designed to burn wood but soon included coal, coke, natural gas, and finally electric models.

The stove factories were a collection of many separate buildings each performing different functions (probably for fire control). The heart of each factory was the foundry for iron casting of stove components. Coke fired iron melt furnaces (cupolas) were used to melt iron for casting

molds. The molds were the high skill activity of the factories and made of green-sand (sand, clay and coal mixtures). Mold sand was sifted to remove fines and large pieces and re-used. Waste mold sand was landfilled (on-site fill?). The factories also had plating, finishing (painting), assembly, inspection, packaging, warehousing, shipping, powerhouses, maintenance facilities, showrooms, and business offices.

Most stoves were highly ornate (style was a major selling feature) with continually changing styles. Extensive nickel plating (and some aluminum) was used to increase ornamentation. See Figure 9 with an example of one of the most successful stove designs, the Garland stove. Electroless plating uses tanks of pre-cleaning acid solutions, hypophosphorous acid, and rinses. Spent solutions would have been discharged to the river.

Based upon the duration of operations and activities associated with the stove manufacturing, it is likely that discharges contributed significantly to the volumes and types of contaminants found in river sediments.

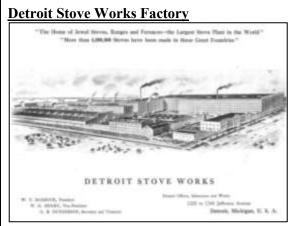

The Detroit Stove Works and Michigan Stove Company merged in 1927. The former Michigan Stove Company factory was closed sometime after this and production transferred to the Detroit Stove Works factory which continued to operate until 1957. The Detroit-Michigan Stove Company was acquired by Welbilt (formerly Enodis) in 1955. Welbilt is an existing and viable business entity. Welbilt had net sales valued at about \$1.5 billion in 2017.

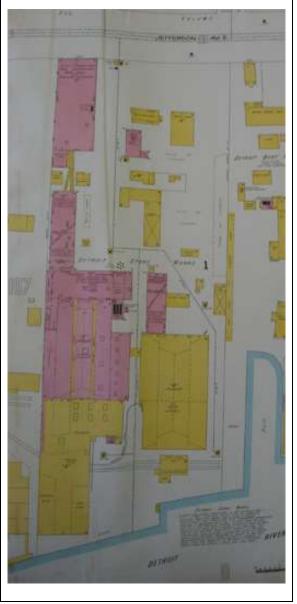

Figure 10 – Detroit-Michigan Stove Company Factories

**Michigan Stove Company Factory** 

#### Michelin (Uniroyal, U.S. Rubber Co., U.S. Tire Co., Morgan & Wright)

Figure 11 – 1930 aerial photo of west end of Harbortown Area

U.S. Rubber Company located at 6600 East Jefferson Avenue began manufacturing in 1906 of a new type of double-tube (inflatable inner tube covered by a durable hard-treaded outer shell) automobile tire adopted from the Moran-Wright bicycle tire manufactured on the site previously. U.S. Rubber Co. grew quickly with the emerging automobile business to become the largest (for a time) tire manufacturer in the country. See Figure 12 for a photo of the original tire factory. U.S. Rubber changed its' name in 1920 to U.S. Tire Company and then Uniroyal in the 1960s. Michelin purchases Uniroyal in 1990. The plant closed in 1981 (bought by Detroit for \$5 million) and demolished in 1985. The site set idle until remediation work began in 2011, Michelin participated in funding the clean-up. See Figure 11 for an aerial photograph of the east end of the Harbortown area showing the U.S. Tire Company and other prominent factories.

In addition to automobile tires, the plant manufactured aircraft tires, construction equipment tires (large and small) and smaller solid rubber tires. During WWII a variety of rubber products were produced at the plant in addition to tires, these included; plastic steering wheels, rubber cement, airplane engine mountings, truck vibration dampers, self-sealing fuel cells, fuel cell fittings, tire flaps, aircraft antenna masts, and cemented tire fabrics. The Plant manufactured tens of millions of tires over the 75-year operating history.

An industrial waste survey conducted at Uniroyal during 1963 (with plant personnel participation) revealed total solids discharges to the Detroit River via two outfalls of more than 5

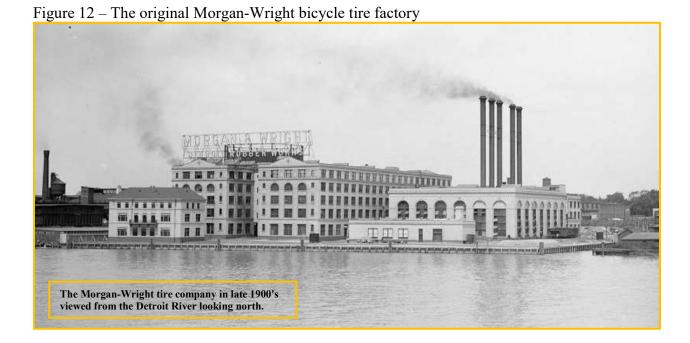

tons per day and discharges of zinc at about ½ ton per day. The plant had a waste water treatment system in place and a program to collect waste oil within the plant (oil in the discharge was not sampled during the survey). It is likely that the waste water treatment and oil collection were relatively recent features at the plant.

Automobile tire rubber in general consists of approximately 40–60% rubber polymers; 20–35% reinforcing agents/fillers such as carbon black or silica; and 15–20% mineral oils such as extender oils/ softeners. Precise compositions vary depending upon where in the tire the rubber is used. Highly aromatic (HA) oils used as extender oils or softeners in the tire-manufacturing process have concentrations of PAHs ranging between 10 to 30%.

Another material known to contain PAHs used in tire manufacturing is carbon black. Carbon black is a form of elemental carbon used as reinforcement material in the tire rubber to give the tire its desired properties in abrasion resistance and tensile strength.

PAHs are a class of organic compounds produced by incomplete combustion or high-pressure processes—i.e., when complex organic substances are exposed to high temperatures or pressures. These are both production characteristics of tire manufacture. The Uniroyal (and predecessor companies) would certainly have been significant direct and indirect dischargers of PAHs to the Detroit River.

There are over a hundred congeners of PAH, it is likely that PAHs identified in Detroit River sediments could be matched to PAHs present on the former tire manufacturing site prior to remediation. Michelin is an existing and viable company with annual revenues of over \$24 billion (second largest tire manufacturer in the world behind Bridgestone).

#### **DTE Energy (Michcon & Detroit City Gas Company)**

The first coal gasification plant in Detroit was established in 1849 on East Jefferson and Meldrum Streets in the Harbortown area by Detroit City Gas Company. See Figure 11 for an aerial photo of the east end of the Harbortown area showing the coal gasification plant (and iconic gas holding tanks). The process involved converting solid coal into a carbon rich gas that could be distributed by pipes to burn for light and heat. During the mid-1800s light was provided by burning candles or oil and heating was achieved by burning wood or coal. Coal gas was significantly cheaper than the other fuels and enabled reliable public lighting and a means of illuminating inside factories. By 1851 the first street lights in Detroit were erected on Woodward, Woodbridge and Jefferson Avenues. Demand for coal gas 'sky-rocketed' and a second coal gasification plant was built on Jefferson by what is now the Ambassador Bridge (not in the Harbortown area).

Coal gas was really the only viable means of providing public lighting and night-time lighting in factories until the 1900s when electricity and incandescent lamps became available. Electric light is far brighter and constant (no flickering as with coal gas) and was quickly adopted as the infrastructure was established to support it. However, coal gas remained viable and active (although declining) well into the mid-1900s. The Detroit Gas Light Company coal gasification plant operated on East Jefferson and Meldrum Streets until the early 1980s, although it is unclear from available records how long coal gasification was performed at the site.

Significant quantities of waste products are generated by the coal gasification process. Most notable are a variety of coal tars. The tar is rich in hydrocarbons and other chemicals with beneficial properties and operators were always looking for markets to use or process the waste products. The market for tar varied and when plants could not sell tar it had to be stored or dumped. Coal tar sludge has no resale value and so was always dumped. For this site, dumping means the Detroit River. PAH is present in coal tar, gas tar, and pitch at significant concentrations. In addition, waste tars degrade to form phenols, BTEX, and PAH. The coal gasification plant would have been a significant contributor of sediments in the river containing PAHs.

Also, the coal gasification process reacts coal with oxygen, steam and carbon dioxide to form a gas containing hydrogen and carbon monoxide. During this process, which is essentially incomplete combustion, the heat evolved is consumed and the sulfur and nitrogen in the coal are converted to hydrogen sulfide and ammonia, respectively. Ammonia is a valuable agricultural fertilizer and a refining plant was established at the foot of the river on the site (the Michigan Ammonia Works, acquired by DuPont in 1929). See Figure 11 for an aerial photo of the east end of the Harbortown area showing the location of the Michigan Ammonia Works. DuPont is an existing and viable entity with annual revenue of about \$25 billion that participated in recent soil remediation at the site.

In 1937, Detroit City Gas Co., the Grand Rapids Gas Light Co., the Washtenaw Gas Co. and the Ann Arbor Gas Co. merged to become Michigan Consolidated Gas Co. (or MichCon). DTE Energy acquired Michcon in 1999. DTE Energy is an existing and viable entity with annual revenue over \$10 billion that participated in recent soil remediation at the site.

#### **Berry Brothers Paint & Varnish Company**

Figure 13 – Berry Brothers Paint & Varnish Company, Circa 1881

A paint and varnish factory was established in 1858 at Lieb and Wight Streets to the foot of the Detroit River. The Berry Brothers Paint & Varnish Company operated at the site for approximately 100 years. The company specialized in air dried varnishes and paints and was for a period during the late 1800s and early 1900s the largest paint manufacturer in the country. A second factory was operated in Walkerville, Ontario.

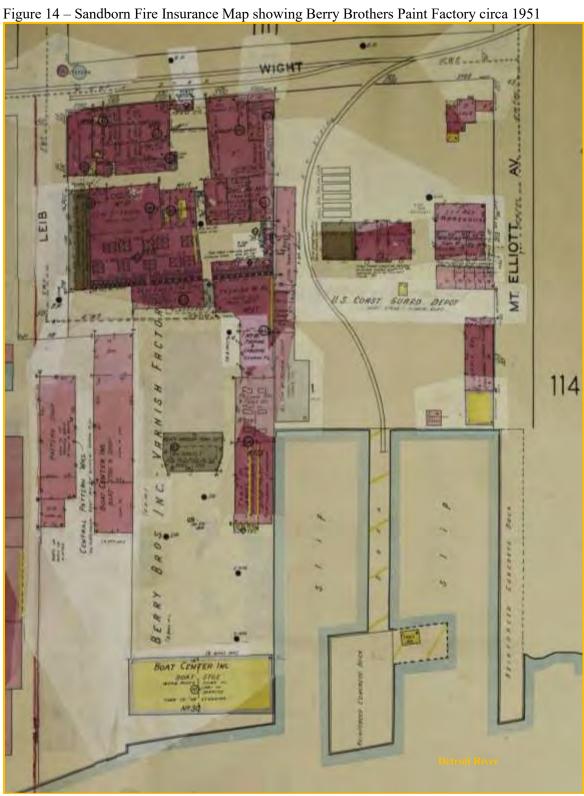

The Berry Brothers Paint & Varnish Company had a major presence in the carriage, railcar, boat, airplane, automobile, and architectural markets. The company's varnishes were the 'gold-standard' for wood floor varnishes, airplane dopes, and boat paints and were shipped to virtually every market in the world. One of the company's key products was Japan Black (the fast drying, high gloss black paint used on all early carriages and automobiles). The factory experienced numerous fires over the years, burned to the ground (in total or part) and was rebuilt. See Figure 13 for an image of the factory office in 1881, this building was soon replaced with a larger multistoried building.

The Harbortown area was very congested and room for expansion was hard to come by, but Berry Brothers acquired more land north of Wight Street and another disconnected parcel to the northeast (on Jefferson) to accommodate expansion. See Figure 14 for a 1951 Sanborn Fire Insurance Map (updated from a 1922 version) showing the main paint factory. The map reveals dozens of paint and varnish processing vats, powerhouse, maintenance, and shipping facilities as well as a boat slip. The Berry Brothers advertisements boasted of over a million gallons of storage capacity.

It is possible, perhaps likely, that a significant quantity of feed stock for the paint and varnish manufacturing came from the adjacent coal gasification plant. For example Japan Black is made of 25–35% asphalt (bituminous) and 10% linseed oil with lead and iron-based dryers, dissolved in 55% thinners (usually naphtha). The asphalt and thinners could have been distilled from the coal tar.

The Combination Gas Machine Company located at the corner of Lieb and Wight Streets was also a wholly owned subsidiary of the Berry Brothers. The factory manufactured, sold and serviced gasoline fueled interior light fixtures. Presumably, gasoline provided a brighter, steady light as compared to gasified coal fuel which tended to provide a disconcerting 'flickering' light. In spite of the obvious safety concerns, the enterprise lasted from 1882 until the early 1900s when electricity replaced the need for fueled lighting.

Based upon the nature of the Berry Brothers manufacturing and duration of operations, it is likely that the factory contributed significantly to contaminated sediments present in the river. However, Berry Brothers Paint & Varnish Company is no longer an existing or viable enterprise. No successor organizations have been identified.

#### **Detroit Elevator Company**

Figure 15 – A recent photo of the Detroit Elevator Company building prior to renovation

Figure 16 - The Detroit Elevator Company building renovated, repurposed, and renamed

The Detroit Elevator Company (DECO) is an elevator manufacturing and service company established in 1914 at 1938 Franklin Street. DECO operated at this site until the 1960s when operations transferred to Ferndale, MI. Activities included machining and fabrication involving cutting fluids and lubricants. The Elevator Building was renovated in 2010 as office space, located in the East Riverfront District Redevelopment Plan area (Reportedly used for bootlegging by the Purple Gang during Prohibition 1920-1933). See Figure 15 and 16 for before and after renovation photos, respectively.

Although the machining operations are relatively small by todays' standard, they often packed in work station after work station often employing hundreds of workers running practically nonstop. The machine tools would use cooling and lubricating oils that dumped to sewer and discharged to the river when spent. See figure 17 for a photo of the DECO shop floor during the

early 1900s. This would be typical of scores of machine shops operating in the Harbortown Area.

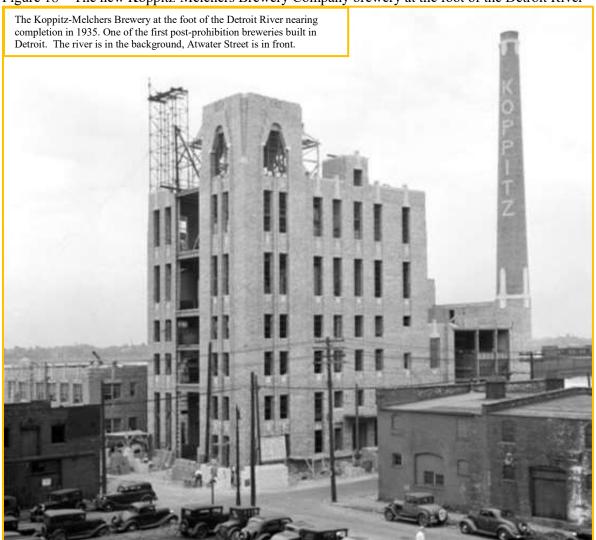

DECO is an existing and viable company employing less than 50 people with revenues reportedly about \$2.5 million annually.

Figure 17 – Detroit Elevator Company machine shop

## Pabst Brewing Company (Stroh's Brewing Company, Goebel Brewing Company, Koppitz-Melchers Brewery Company) <sup>1</sup>

Figure 18 – The new Koppitz-Melchers Brewery Company brewery at the foot of the Detroit River

Detroit has a long and rich history of beer brewing. Starting around 1850 with Bernard Stroh, Detroit ultimately supported close to a hundred independent regional breweries many of which located in an area referred to as Brewery Park about a mile inland from the Harbortown river front (the Gratiot and Maple area, by what is now Lafayette Park). Most notable was the large Stroh's Brewery at Gratiot and I-75.

Prohibition decimated the brewery industry with most shutting down and a few transitioning into related businesses. When Prohibition was repealed, some breweries re-opened. One brewery, Koppitz-Melchers Brewing Company constructed a new brewery in 1935 at the intersection of Dubois and Atwater (what is now Chene Park) to replace their pre-Prohibition brewery. See Figure 18 for a photo of the brewery nearing completion. The brewery was a modern, efficient

design and had the capability of brewing up to 200,000 barrels of beer annually. However, regional breweries struggled to compete against breweries with national markets. Detroit (as with all regional beer markets) experienced a progressive consolidation of breweries until just a few companies with national market reach survived. Stroh Brewery Company was the last to survive and was ultimately split-up and acquired by Pabst Brewing Company and Miller Brewing Company in 1999.

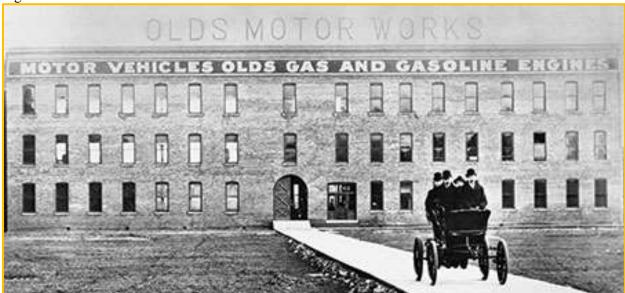

The Koppitz-Melchers Brewery Company was acquired by Goebel Brewing Company (another strong regional brewery located in Detroit) in 1947 and continued production until 1964 as Goebel's Plant #2. The Stroh Brewery Company acquired Goebel's in 1964 and discontinued production and razed the former Plant #2 brewery a couple years later (1967?).

Peter Stroh was a great benefactor of Detroit and invested heavily in redevelopment efforts (particularly after the 1967 riot), particularly the river front area in the latter half of the 1900's. Stroh re-furbished and occupied the former Parke-Davis Building as the company headquarters (300 River Place Dr.). A monument to Peter Stroh is located in Milliken State Park.

Breweries generate large quantities of high BOD liquid and slurry organic waste. The proximity to the River and common practice of the early 20<sup>th</sup> century would make it highly likely, if not probable, that brewery liquid wastes were discharged directly to the Detroit River. All breweries preceding Pabst Brewing Company at the Atwater & Dubois Street facility no longer exist. Pabst Brewing Company is an existing and viable privately held enterprise valued at \$700 million (latest available estimate). Most of Pabst's brewing is performed under contract with MillerCoors (who is threatening to withdraw from the contract which has sparked a bitter legal battle scheduled to be adjudicated this year, the outcome of which may affect Pabst's viability).

## Olds Motor Works (Hupp Motor Car Co., King Motor Co., Wadsworth Manufacturing Co.) k!/m/n/

Figure 19 – The Olds Motor Works on East Jefferson

DETROIT MADE The Olds Motor Works, completed in 1900 along E. Jefferson next to the Belle Isle Bridge (the Uniroyal plant eventually occupied the site), was the first factory in the world specifically designed for automobile manufacturing. It burned down in March 1901 and the operations were moved back to Lansing. PHOTOGRAPH COURTESY OF GM ARCHIVES (original caption) <sup>k/</sup>

An example of how dynamic industrial activity was in the Harbortown area during the early 1900s is the number of enterprises located at Jefferson and Concord. This is the site of the first dedicated automobile assembly plant in the United States. Ransom E. Olds built his first factory next to the Detroit Stove Works in 1899 and began producing automobiles in 1900. See Figure 19 for an early image of the Olds Motor Works. The factory was comprised of a number of multi-floor buildings mostly constructed of wood. A fire in 1901 destroyed most of the complex but left a foundry building intact. The foundry was stripped and reconfigured as an assembly building and production resumed using parts purchased from other suppliers (establishing the pattern used by most modern automobile manufacturers today). The tight quarters in the Harbortown area made testing finished automobiles impossible on-site (test tracks are a feature of most modern automobile assembly plants). So Olds drove his automobiles around the corner, across the McArthur Bridge and tested them on Belle Isle. See Figure 20 for a photograph of the commemorative marker erected on Belle Isle.

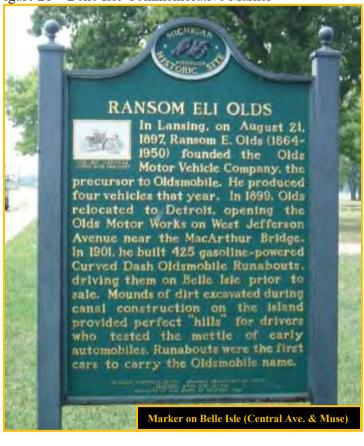

Figure 20 – Belle Isle Commemorative Marker

As sales took off, Olds needed more room, built a new factory, and returned to Lansing (because of generous tax incentives). But the site on Jefferson Avenue did not sit idle for long, Hupp Motor Car Company moved in around 1909. The Hupp Motor Car Co. was organized on November 8, 1908, in a rented factory at 345 Bellevue Avenue (just off Jefferson in the Harbortown Area). Hupp operated at the former Olds Motor Works site until 1912 when it relocated to a new and larger factory on Milwaukee Street in the Midtown area. Then King Motor Company moved in for a few months before going into receivership (and may have lingered on for several more years). Wadsworth Manufacturing Company bought the buildings sometime around 1912. Wadsworth manufactured an eclectic mix of metal products from boats, to automobile bodies, to marine and car engines, to pumps, and the list goes on...at sites all up and down Jefferson Avenue in the Harbortown area. In 1915, the site would be purchased and occupied by an expanding US Tire (Uniroyal) Company.

Importantly, manufacturing on the Olds Motor Works site would have resulted in significant quantities of oily waste water containing heavy metals discharged directly into the Detroit River. Uniroyal (now owned by Michelin) was the last enterprise operating on the site prior to the current vacant status. General Motors (GM) was the last owner of Oldsmobile (the successor to Olds Motor Company) and has passed through Chapter 11 bankruptcy and reorganization. Hupp and King Motor Companies have dissolved with no discernible successor entities. Wadsworth Manufacturing Company was acquired through succession by Fiat Chrysler Automobiles (see Wadsworth Manufacturing Company for further detail).

Michelin is an existing and viable company with annual revenues of over \$24 billion (second largest tire manufacturer in the world behind Bridgestone). GM is an existing and viable

company with revenues of about \$146 billion (2017). However, GMs willingness to engage in Detroit River remediation partnership based upon a succession ownership of Olds Motor Works through a Chapter 11 bankruptcy is questionable.

# Wadsworth Manufacturing Co. (American Motor Body Co., Standard Motor Parts Co., Chrysler Corp.) <sup>a</sup>

Figure 21 – Wadsworth Manufacturing conglomerate

The Wadsworth Manufacturing Company showroom and part of the factory (on the left), Jefferson is the street in the front and the Detroit River is behind. Often referred to as Detroit Engine Works, as the sign indicates several other entities also reside at the same location. Notice the sign on the right side of the building directing traffic to the Morgan & Wright Tire Factory (behind along the river).

Photo taken sometime between 1906-1914 courtesy of Burton Historical Collection Detroit Public Library

Wadsworth Manufacturing Company was a conglomeration of wholly owned manufacturing companies located along Jefferson Avenue in the Harbortown area. Some of the entities shared a common factory while others were located nearby but in separate factories. See Figure 21 for an early photo of the Wadsworth Manufacturing Co. with multiple co-located factories. The factory and showroom in the Figure 21 photo was located at 6656 East Jefferson Avenue and was sold to US Tire around 1914 to accommodate their expansion. Wadsworth built a new factory in 1915 further to the east on Jefferson at Conner across the street from the Maxwell-Chalmers automobile factory (later to become Chrysler). Most of the Wadsworth factories along Jefferson were in the five blocks between Mt. Elliot Street and Canton Street on the north side and a two block stretch between Mt. Elliot and Meldrum Street on the south side. Exact addresses are difficult to identify because the street numbering system in Detroit was changed in the early 1920s.

The umbrella of Wadsworth factories included: Columbia Engine Company, Detroit Boat Company, Detroit Engine Works, Detroit Forging Company, Detroit Motor Car Supply Company, Michigan Steel Boat Company, St. Clair-Athol Rubber Company and the Thrall Motor Company.

Columbia Engine, Detroit Engine and Thrall Motor manufactured 2-cycle marine and stationary engines rated between 2- and 50-hp. Also offered by Detroit Engine was a range of light kerosene-powered 6 to 18 hp Wadsworth farm tractors.

Detroit Forging specialized in drop-forged automobile parts, specifically convertible top hardware. St. Clair-Athol Rubber Co. manufactured rubber-coated automobile fabrics that were also used in convertible tops. Detroit Motor Supply manufactured automobile bodies and distributed Sandow-brand 2-cycle engines, which were actually a product of the Detroit Engine Works. See Figure 22 for an image of the Detroit Motor Supply Co. factory. Michigan Steel Boat and Detroit Boat manufactured small boats which more often than not were powered by engines manufactured by the Detroit Engine Works.

Wadsworth Manufacturing Company was established in 1896 and operated until about 1920 when it was broken up and sold to Standard Motor Parts Company and American Motor Body Corporation (which was purchased by Chrysler Corporation in 1925). Standard Motor Company located at 584-590 Franklin Street (now a parking garage) was an aftermarket parts seller specializing in supplying parts for engines, tractors, and equipment no longer being manufactured. See Figure 23 for a photo of the Standard Motor Co. viewed from Franklin Street. Standard took over operations of Detroit Engine Works, Detroit Boat Company, Columbia Engine Company, Detroit Motor Supply Company, and Michigan Steel Boat Company. The remainder (majority) of Wadsworth Manufacturing Company which focused on automobile body and component manufacturing merged into the American Motor Body Corporation and was purchased in 1925 by Chrysler Corporation (principally the factory at Conner and Jefferson).

Figure 23 - Standard Motor Parts Company

Photo courtesy of Burton Historical Collection Detroit Public Library

Importantly, manufacturing at virtually all of the Wadsworth factories would have resulted in significant quantities of oily waste water containing heavy metals discharged directly into the Detroit River. The Wadsworth factories engaged in casting of steel, iron, brass, and bronze, steel stamping, machining, grinding, and finishing, wood working and finishing, and upholstery work (including automobile 'convertible' covers with a rubberized treatment and seat covers). Standard Motor Parts Co. does not appear to remain a viable enterprise and no successor organizations have been identified. However, Chrysler Corporation's successor organization, Fiat Chrysler Automobiles (FCA) is an existing and viable enterprise with corporate revenue of about \$113 Billion (2017).

#### Parke, Davis & Company (Warner-Lambert, Pfizer)

Figure 24 – The Parke-Davis Complex of Buildings on the Detroit River

Established in 1860 between Jos Campau and McDougall at the river front Parke, Davis & Company was the first modern pharmaceutical company. See Figure 24 for an artist rendering of the complex as it looked in the early 1900s. The site contained over two-dozen structures on about 14-acres housing laboratories and production facilities. The company was a pioneer in establishing quality, concentration, and dosing controls for drugs and developed many therapeutic medicines such as adrenaline (epinephrine), the first bacterial vaccination, antibiotics and treatments for epilepsy, diphtheria, and contraceptive pills. The laboratory and factory employed thousands of workers for over 100 years.

Many of the early drugs were synthesized from/by animals. Parke-Davis maintained a large stable next to the factory on the river front until 1907 when the company purchased a large farm near Rochester, Michigan (called Parkedale). The animals at Parkedale were probably the best fed and cared for in the world. Horses were required for the production of serums used against diphtheria, tetanus, and gangrene. During World War I there was a tremendous demand for Antitetanic Serum and ultimately over 600 horses were kept on the farm.

Parke-Davis was purchased by Warner-Lambert in 1970 and they began to move many of their operations to a facility in Ann Arbor. That firm was purchased by Pfizer in 2000, a company that subsequently closed their Ann Arbor campus. After Parke-Davis left Detroit, the Stroh's Real Estate firm purchased this riverfront property and converted many of the buildings into condominiums, restaurants, a health club, office space and the Omni Hotel (in 2011 the hotel changed ownership and became The Roberts Riverwalk Hotel and Residence.

Waste water from the Parke-Davis laboratory and factory would have been discharged directly to the Detroit River. The site operated coal-fired boilers for heat and steam and an incinerator, although it is unclear what protocols were employed for waste destruction. Discharges to the river would have been largely organics and are unlikely to have contributed significantly to the quantities or characteristics of the sediments identified in the river.

## Frederick Stearns & Company (The Lofts at Rivertown)

Figure 25 – The Fredrick Stearns & Company pharmaceutical factory

Frederick Stearns & Company was established in 1855 as basically a pharmacy with a sideline of producing patent medicines (alcohol with ingredients added). By aggressive marketing sales took-off, the pharmacy portion was closed in favor of full time drug production in 1882. A modern factory and distribution system was constructed in 1890 and the manufacturing plant was located at 6533 East Jefferson Avenue. See Figure 25 for a turn of the century era photo Frederick Stearns building. One of the truly innovative features of Frederick Stearns & Company was listing ingredients on the labels, making it possible for doctors and patients to know what they were taking. Between Frederick Stearns & Company and Parke-Davis Detroit became the leading producer of pharmaceuticals in the country of almost 100 years. Frederick Stearns & Company appears to have ceased operations during the mid-1900s with no successor organization identified. The factory building was registered as a significant historical building and was converted into condominiums in 1989, and is now known as the Lofts at Rivertown. See Figure 26 for a photo of the repurposed Frederick Stearns building.

Waste water from the Frederick Stearns pharmaceutical factory would have been discharged directly to the Detroit River. Discharges to the river would have been largely organics and are unlikely to have contributed significantly to the quantities or characteristics of the sediments identified in the river.

Figure 26 – The repurposed Frederick Stearns building

#### **Frost Lumber Works**

Saw mills were among the first industrial activities in the Harbortown river front area. Records indicate as many as a dozen saw mills were active along this stretch of river front. The saw mills were primarily active during the early to mid-1800s and played a key role in filling the wetlands along the river front. As was the practice during this era, saw mills were constructed on piers extending out over the water. Logs were floated up to the mill, lifted from the water, sawn into lumber, and the cutends and saw dust dropped back into the water. The lumber and cut-slabs (the outer un-usable portion of the log with bark) were conveyed out the back of the mill into the storage yard. Lumber was stacked for drying prior to sale or further machining and the slab was used to fire boilers to provide power to the saw mill (and manufacturing plants).

Frost Lumber Works was established in 1854 at the corner of Lieb & Wight Streets to the foot of the river. The saw mill had an integrated factory for making furniture, boxes, and other utilitarian wood items. It appears to be the last remaining mill in the Harbortown area and continued on until the early 1900s. The enterprises' longevity was probably the result of taking advantage of both the river and railroads to deliver logs and ship product. During warm weather logs were brought in from the river and during the winter the railroads were used to keep the supply of lumber feeding the factory. Similarly, the factory's products were shipped by both water and rail.

Although it is likely that this and other saw mills contributed significantly to filling the wet-lands that bordered the river and extend the shore line out further into the river channel, it is unlikely that this or the other saw mills contributed significantly to the quantity and type of contaminants currently identified in river sediments. No successor organization has been identified for Frost Lumber Works.

## American Car and Foundry Company (ACF-Brill, ACF Industries LLC) <sup>p/</sup>

The Peninsular Car Company was established in 1880 at the foot of the Detroit River between Walker and Adair Streets (what is now the UAW-GM Human Resources Center). The establishment was a steel foundry and forge for manufacturing railcar wheels and chassis. The congested river front soon proved to be an impediment to growth and the factory was moved inland (about a mile) to the Milwaukee Junction area in 1885.

Michigan Peninsular Car Company was established in 1892 by consolidation of Peninsular Car Company, Michigan Car Company, Detroit Car Wheel Company, Michigan Forge and Iron Company, and Detroit Pipe & Foundry Company. A succession of mergers and consolidations in the railcar industry resulted in the Michigan Peninsular Car Company being adsorbed into The American Car and Foundry Company (ACF) in 1899. Further consolidations and labor issues in Detroit drove most of the railcar industry to other states. American Car and Foundry Company is now ACF Industries LLC owned by Carl Icahn, an existing and viable privately held company.

# Russell Wheel and Foundry Company 4

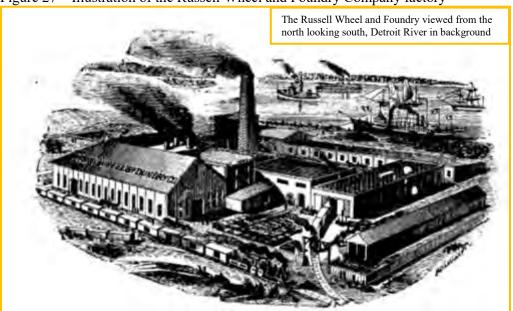

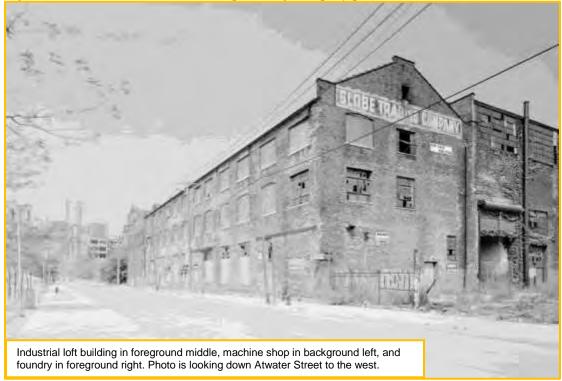

Figure 27 – Illustration of the Russell Wheel and Foundry Company factory

The Russell Wheel and Foundry Company was established at the foot of the river and Walker Street in 1876. The factory was a prosperous steel foundry and forge for the production of railcar wheels and railcars for the logging and saw mill industries. By 1884 the factory was pouring 2,600 tons per year of steel. The Russell Wheel and Foundry Company expanded into the structural steel business and supplied beams and columns for the Hammond Building in Detroit (across from city hall on Fort Street) in addition to others. The Great depression killed the business and it closed in 1916. No succession organizations have been identified.

## **Detroit Shipbuilding Company (aka Dry Dock Complex)**

Figure 28 – Remains of the Detroit Shipbuilding Company prior to renovation

The Detroit Shipbuilding Company was established by the consolidation of the Detroit Dry Dock Company (Orleans Street at foot of Detroit River), Dry Dock Engine Works (1801 Atwater Street), and Detroit Sheet Metal and Brass Works (64 Orleans Street) in 1899. All enterprises were clustered around the intersection of Atwater and Orleans Streets to the foot of the river. See Figure 28 for a photo of the remaining buildings prior to renovation and repurposing as a DNR Outdoor Adventure Center.

First established in 1852 as Campbell & Owen the business later changed its name to the Detroit Dry Dock Company in 1877. As the name indicates, the business built and repaired ships in dry dock (out of water), first wood hulls then metal. The Dry Dock Engine Works was soon (1866) established 'next door' to provide marine engine service and construction. The Engine Works also manufactured engines for mining, steam engines and other related cast and machined parts made of iron, steel and brass. A foundry, metal machining and assembly operations were all part of the site (Henry Ford worked on engines at the Dry Dock Engine Works from 1880 to 1882). Detroit Sheet Metal and Brass Works was founded in 1895 and machined metal for ship hulls as well as castings of brass for both marine and other purposes. See Figures 30 and 31 for complex plan drawings used as part of the site National Register of Historic Places designation.

The Detroit Shipbuilding Company was a wholly owned subsidiary of the American Shipbuilding Company. Operations flourished during the early 1900s producing and repairing hundreds of lake and ocean going vessels and was one of the largest employers in Detroit during this period. The on-set of the Great Depression killed the Detroit Shipbuilding Company and all

operations ceased by 1929. In subsequent years, several minor operations occupied the vacated facilities including a cabinet shop, a stove manufacturer, a reconditioning and appliance shop (Detroit Edison), and for machinery and mill supplies (Globe Trading Company). Eventually, the site was acquired by Michigan Department of Natural Resources and converted into the Outdoor Adventure Center. See Figure 29 for photo of the buildings after renovation. The remaining buildings are included in the National Register of Historic Places because of the architectural significance of the structures.

The American Shipbuilding Company (owned by the Steinbrenner family of New York Yankee interest) continued to operate at with other dry dock operations around the Great Lakes as one of the leading US ship building operations until bankruptcy in 1993 and sale in 1995.

Importantly, the dry dock, engine, and metal operations at the site would have generated significant quantities of oily, heavy metals laden waste water that would have been discharged directly into the Detroit River. Further, the site was involved in PCB contaminated soil remediation as part of the MDNR site redevelopment.

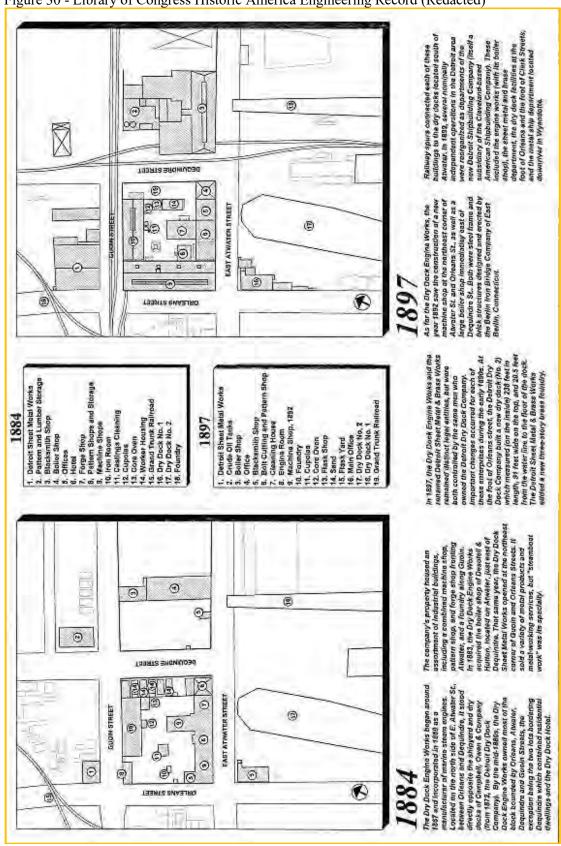

Figure 30 - Library of Congress Historic America Engineering Record (Redacted)

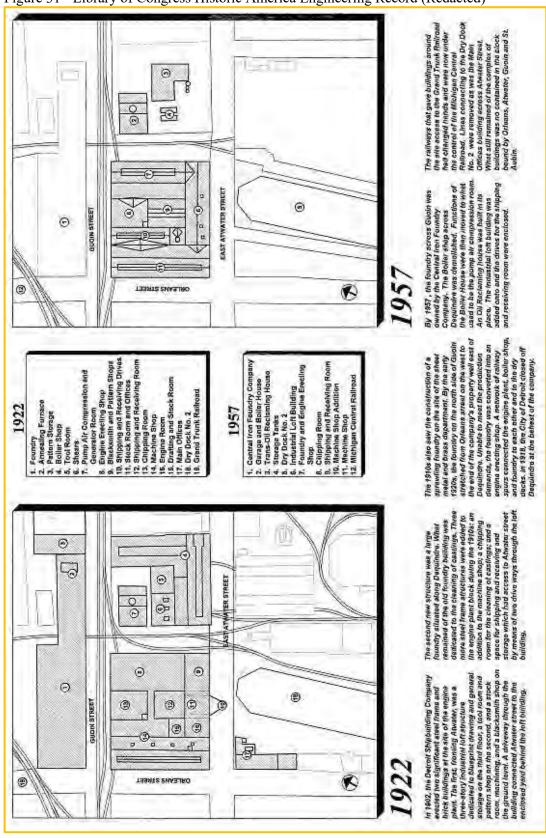

Figure 31 - Library of Congress Historic America Engineering Record (Redacted)

## **Sherwood Brass Works (Pentair Corp.)**

The Sherwood Brass Works was established at 6331 East Jefferson Avenue in 1907 as a brass foundry specializing in the manufacture of water pumps for the marine industry. Sherwood designed, cast, machined, assembled, sold, and distributed marine water pumps to both original equipment manufacturers (boat builders) and the aftermarkets. They also manufactured other related parts and even did some aluminum casting. Sherwood pumps were reliable and efficient and much sought after. During World War II Sherwood pumps were used extensively in supporting the war effort (particularly landing craft).

The foundry and machining operations would have resulted in significant quantities of oily waste water containing heavy metals discharged directly into the Detroit River. Brass is a blend of copper, zinc, and lead so it is likely that metals would have been present in Sherwood discharges.

Sometime after the World War II, Sherwood Brass Works was closed and the Sherwood brand purchased by Pentair Corporation which is an existing and viable enterprise with annual revenue of about \$2.8 Billion.

## Dalzen Tool and Manufacturing Company (Bedco) <sup>1</sup>

The Dalzen Tool and Manufacturing Company was established at 511 Leib Street in 1932 as a tool design and manufacturing enterprise. Manufacturing mostly involved machining of high quality steel. During World War II, Dalzen was tasked with manufacturing tread grinders, ground thread taps, tools, and broaches (basically tools to make other stuff). Dalzen also holds a patent for a furnace burner design. At some point after World War II, Dalzen was relocated to East China, Michigan (in St. Clair County) and became Bedco, Inc. which is an existing and viable enterprise.

Dalzen Tool and Manufacturing Company operations would have resulted oily waste water containing heavy metals discharged directly into the Detroit River. However, it is unlikely that quantities would have significantly contributed to sediments identified in the river.

# **Detroit Universal Duplicator Corporation**

Detroit Universal Duplicator Corporation is another of the seeming multitude of short lived specialty enterprises that popped-up in the Harbortown area to fill a niche and then disappear. Detroit Universal Duplicator was located at 253 St. Aubin Street around the period of World War II. The company was identified as being one of those vital activities that supported the war effort. The company specialized in making machine tools and, as the name suggests, duplicating controls. The ability to 'automatically' duplicate machining was a major productivity advancement. There are no readily available records that indicate when the enterprise was established nor when it ended, but it no longer exists at the St. Aubin Street address.

Machining is certainly the type of activity that would have generated oily wastes with heavy metal contamination and disposal practices of the period would have resulted in wastes being discharges to the Detroit River. However, it is unlikely that this operation alone would have been a significant contributor to contaminated sediments in the river.

## Apex Broach Company s/

Another of the machine tool manufacturers located in the Harbortown area filling niche for specialized tools. Apex Broach and Machine Company was established in 1931 at 2981 East Lafayette Street as a manufacturer broach cutting tools for the automotive industry in Detroit. In 1960 Apex built its first broaching machine and quickly expanded to offering a full line of broaching machines. Around the 1960 period, Apex relocated to Warren, Michigan. Apex Broaching systems remains an existing and viable enterprise.

Tool manufacturing is certainly the type of activity that would have generated oily wastes with heavy metal contamination and disposal practices of the period would have resulted in wastes being discharges to the Detroit River. However, it is unlikely that this operation alone would have been a significant contributor to contaminated sediments in the river.

# **Chicago Pneumatic Tool Company**

The Chicago Pneumatic Tool Company is another of the machine tool manufacturers located in the Harbortown Area filling the niche for specialized tools. The company was identified as being one of those vital activities that supported the World War II war effort. Chicago Pneumatic Tool Company was located at 570 East Larned Street as a manufacturer of mostly handheld pneumatic hydraulic and electric tools. Interestingly, the rivet gun illustrated with the iconic 'Rosie-the-Riveter' in World War II propaganda was a Chicago Pneumatic Tool Company designed and manufactured riveter. There are no readily available records that indicate when the enterprise was established nor when it ended, but it no longer exists at the Larned Street address.

Tool manufacturing is certainly the type of activity that would have generated oily wastes with heavy metal contamination and disposal practices of the period would have resulted in wastes being discharges to the Detroit River. However, it is unlikely that this operation alone would have been a significant contributor to sediments in the river.

## **Huck Manufacturing Company (Federal-Mogul, Thiokol, Alcoa)**

Huck Manufacturing established in 1940 was located at 2480 Bellevue Street and specialized in producing fasteners. During World War II the plant focused on manufacturing aluminum aircraft rivets to support the war effort. After the war the plant continued to produce a variety of aluminum and steel fasteners. Huck Manufacturing invented, patented, and produced Lock-Bolts.

Huck Manufacturing utilized melt furnaces and machining operations to produce fasteners for over thirty years of operation at the site. This type of activity would have generated oily wastes with heavy metal contamination and disposal practices of the period would have resulted in wastes being discharges to the Detroit River. However, it is unlikely that this operation alone would have been a significant contributor to sediments in the river.

Around 1973 production transferred from Detroit to Waco, Texas. Huck Manufacturing was acquired by Federal-Mogul in 1980 and subsequently sold to Thiokol in 1991. In 2000 Thiokol merged with two divisions of Alcoa and with Howmet Castings and Huck Fasteners to become AIC Group (Alcoa Industrial Components) and is now part of Alcoa Fasteners. Alcoa is an existing and viable enterprise with annual revenue of about \$12 Billion (2017).

## **Cross Gear and Machine Company (Fives Group - Giddings & Lewis)**

The Cross Gear and Machine Company started in 1898 as a small machine shop, by 1910 it was building marine and automobile engines, transmissions, and axles. The Great Depression changed the company focus to machine tools. During World War II the Cross Company produced tools to make armaments including milling, boring, gear chambering, and burring motors. After the war, the company became a leader in machine tool automation. The Cross Company combined with Kearney & Trecker, a Wisconsin machine toolmaker around 1980. The new company Cross & Trecker was acquired by Giddings & Lewis in 1991 making it one of the largest machine tool automation companies in the world and the largest in North America. In 2013 a Paris company, Fives Group acquired Giddings and Lewis. At some point in the company's post World War II history the facility on Bellevue was closed and moved to Farmington Hills.

Tool manufacturing (and the other, earlier manufacturing activities) is certainly the type of operations that would have generated oily wastes with heavy metal contamination and disposal practices of the period would have resulted in wastes being discharges to the Detroit River. However, it is unlikely that this operation alone would have been a significant contributor to sediments in the river. Fives Group is an existing and viable enterprise with sales over \$2 Billion (2017).

#### Detroit Standard Gear Co.

The Detroit Standard Gear Company was established in 1912 at 742 Woodbridge Street to manufacture marine gears to allow boats to reverse. The gear assembles were manufactured out of steel, brass, and aluminum cast parts produced on site. The enterprise operated until at least 1920 and no records have been located to establish the company's existence beyond this time. Detroit Standard Gear Company is no longer at 742 Woodbridge Street. No successor organizations have been identified.

Gear manufacturing is certainly the type of activity that would have generated oily wastes with heavy metal contamination and disposal practices of the period would have resulted in wastes being discharges to the Detroit River. However, it is unlikely that this operation alone would have been a significant contributor to sediments in the river.

## **Stroh Casting Company**

The Stroh Casting Company was originally a grey iron foundry established in 1914 producing automobile and tractor parts, by 1918 the foundry was casting 75-tons per day. The foundry was located at 216 Chene Street. During World War I, the foundry made artillery shell casings for the British government. There is mention of a second casting operation, the Stroluminum Company (another Stroh family enterprise of the famed brewing company) established in 1922 to produce aluminum cooking utensils. This was an attempt to diversify at the outset of Prohibit (1920 until 1933). It is unclear if this enterprise was collocated at 216 Chene Street, but it seems likely. Available records do not indicate how long the large Stroh Casting Company foundry operated, but it no longer exists at the Chene Street site and no Stroh companies remain.

The foundry and machining operations would have resulted in significant quantities of oily waste water containing heavy metals discharged directly into the Detroit River.

# **Detroit Gear and Machine Company (Borg-Warner)**

The Detroit Gear and Machine Company was established in 1910 at 674 Woodbridge Street to manufacture automobile transmissions, gears, clutches. Detroit Gear was acquired by the Norge Company in 1925 and then by Borg-Warner Company in 1929. The Borg-Warner Company purchased the Detroit Gear and Machine Company in order to gain needed factory space. Although available records are not clear, Detroit Gear may have operated into the 1950s.

Gear and transmission manufacturing is certainly the type of activity that would have generated oily wastes with heavy metal contamination and disposal practices of the period would have resulted in wastes being discharges to the Detroit River. Borg-Warner Corporation is existing and viable with annual revenues exceeding \$8 Billion.

# Frontier Iron Works (Northern Engineering Works, Pennsylvania Engineering Corp.)

Figure 32 – Northern Engineering Works factory before demolition in 2014

North Engineering Works started as a marine engine manufacturer then produced overhead gantry cranes. Photo presents a view from the north looking south, Goin Street in the foreground and Chene Street to the left towards the river, Atwater Street is behind the building(s).

Frontier Iron Works was established in 1872 with purchase of the Detroit Flax Company (1867) building located at 210 Chene Street to produce marine engines. In 1885 Frontier Iron Works became Northern Engineering Works in 1885 and produced overhead gantry cranes until 1980. The factory was expanded many times over 100-years of operation. Along the way Northern Engineering Works was acquired by Pennsylvania Engineering Corp. The Northern brand was acquired by Crane Manufacturing & Service Corp. (CMS) in 1994, and subsequently became part of the Konecranes family of crane brands. The Chene Street factory was demolished in 2014. See Figure 32 for a photo of Northern Engineering building(s) before demolition.

The machining operations would have resulted in oily waste water containing heavy metals discharged directly into the Detroit River. Konecranes is an existing and viable entity with annual revenue in excess of \$3 Billion.

## 5.0 Potential Partner Identification for each site

## **Detroit River AOC - Harbortown Site - Potential Recruitment Partners Matrix**

Мар		PRP		Successor		Tential Rectulment 1 artilers	
Key	Identified PRP	Operation	PRP Address	Entity	Address	Comments	Assessment
1	Detroit-Michigan Stove Co. (Welbilt)	Cast Iron Stove Manufacturer (foundry, plating, painting)	Michigan - Adair & Wight Street, Detroit - 6900 East Jefferson Ave.	Welbilt	2227 Welbilt Blvd., New Port Richey, FL 34655	Two Plants in Harbortown area. Started 1861 bought by Welbilt in 1955. Extensive foundry operations (coal, coke, slag), painting (Japan Black), and plating operations (nickel & aluminum plating stove fixtures).	Likely a significant contributor of the type of contaminants found in river sediments. A stable and viable business enterprise with about \$1.5 billion in sales during 2017.
2	Uniroyal (Michelin, US Rubber, Morgan & Wright Tires)	Tire Manufacture	6600 E Jefferson Avenue	Michelin	200 E LONG LAKE RD, BLOOMFIELD HILLS, MI 48304	Extensive site remediation w/Detroit, MDEQ & USEPA. No remediation beyond 'sea-wall'. Site cleared, could provide River access	Likely a significant contributor of the type of contaminants found in river sediments. Established history of remediation engagement on-site. Extend clean-up to River remediation.
3	Detroit City Gas Company (Michigan Consolidated Gas Company (MichCon)now DTE Energy)	Coal Gasification	East Jefferson & Meldrum (next to Mt. Elliot park)	DTE		Coal gasification. Extracted burnable gas from coal for lighting and produced coke (furnace fuel) and coal tar (refined for chemical recovery).	Likely a significant contributor of the type of contaminants found in river sediments. DTE participated in soil remediation at the site. Extend clean-up to River remediation.
4	Michigan Ammonia Works (DuPont)	Coal Tar Processing	East Jefferson & Meldrum (next to Mt. Elliot park)	DuPont	4417 LANCASTER PIKE, WILMINGTON, DE 1980	Co-located with coal gasification. Refinned coal tar extracted from coal procesing into ammonia (primarily for agricultural use).	Likely a significant contributor of the type of contaminants found in river sediments. Established history of remediation engagement on-site. Extend clean-up to River remediation.
5	Berry Brothers Paint & Varnish Co.	Paint & Varnish Manufacturer	Lieb & Wight Streets at foot of Detroit River	None Identified		Established in 1858. Operated for at least 100-yearshad on-site storage of over 1.5 million gallons of paints and varnishes. Supplied furniture, carriage, railcar, automobile, boat, stove, architectural paint & varnish (Japan Black).	Likely a significant contributor of the type of contaminants found in river sediments. <b>Can not identify successor entity, if any.</b> Was the largest paint & varnish supplier for many yearsassume it was acquired by another paint manufacturer.
6	Combination Gas Machine Company (Berry Brothers)	Gasoline & Gasoline fired light fixtures	Lieb & Wight Streets	None Identified		Short lived company created at the turn of the century (1900) to compete with coal gasificationcoal gas caused lights to 'flicker'gasoline did not. Company stored and delivered gasoline as well as manufactured fixtures.	Not likely a significant contributor to sediments, but tied to Berry Brothers Paint & Varnish Co.
7	Detroit Elevator Company	Elevator Manufacturing	1938 Franklin Street	Detroit Elevator Company	2121 Burdette St, Ferndale, MI 48220	Site assessments performed; lead, metals and PAHs identified	No longer at Franklin Street. Site assessments appear to be government lead. 100 year history of manufacturing. Privately held company. Would not be major contributor.
8	Koppitz-Melchers Brewing Company (Goebel, Stroh, Pabst Brewing Company)	Beer Brewing	151 Dubois Street at foot of Detroit River	Pabst Brewing Company		Brewery operated from 1935 until 1964. Would have been a large discharger of high BOD organic wastes.	Not the type of facility that would generate the contaminants of interest, but could have been high volumes.

Key	Identified PRP	Operation	PRP Address	Entity	Address	Comments	Assessment
9	Olds Motor Works (Ransom E Olds, GM), Hupp Motor Car Co.	Automobile Assembly	E. Jefferson & Concord	GM		First purpose built automobile assembly plant in Detroit. Olds followed by Hupp, King, Wadsworth.	Olds operated from 1899 to 1901, burned (oil soaked wood floors, welding spark). Test drove cars on Belle Isle. Prior to GM purchase of Olds.
10	Wadsworth Manufacturing (American Motor Body Co., Standard Motor Parts Co., Chrysler Corp.)	Engines, pumps, boats, auto bodies, auto tops, parts	6656 East Jefferson Avenue	FCA		The umbrella of Wadsworth factories included: Columbia Engine Company, Detroit Boat Company, Detroit Engine Works, Detroit Forging Company, Detroit Motor Car Supply Company, Michigan Steel Boat Company, St. Clair-Athol Rubber Company and the Thrall Motor Company.	Likely a significant contributor of the type of contaminants found in river sediments. Relocated to Jefferson and Connor
11	Parke-Davis (Pfizer)	Pharmaceutical Industry	Joseph Campau and River (Historic District)	Pfizer		Pharmaceutical research laboratory and manufacturing factory.	Not the type of facility that would generate the volume and character of sediment of interest.
12	Frederick Stearns & Company	Pharmace utical Industry	6533 East Jefferson Ave.	None Identified		Manufacturing plant and warehouse. (Now the Lofts condominiums building)	Not the type of facility that would generate the volume and character of sediment of interest.
13	Frost's Lumber Works	Lumber Mill & Furniture Factory	Lieb & Wight Streets to Detroit River	None Identified		Operated from 1854 until the early 1900's. One of up to a dozen saw mills along river in Harbortown area. Lasted longest. Brought lumber in by water and train.	Would have been significant contributor to river sedimentswood waste slow to decompose under water, could be used to date sediments.  No successor entity identified. Not the type contaminants of concern.
14	American Car and Foundry Company (ACF-Brill, ACF Industries LLC)	Railcar wheels & Chassis	Walker & Adiar at foot of river	None Identified		Peninsular Car Company (pedicessor of ACF) was established in 1880 and moved to Milwukee Junction in 1885	This facility would have generated and discharged significant volumes of the types of contaminants found in river sediments, but the duration was not long.
15	Russell Wheel and Foundry Company	Railcars & wheels	Walker Street at foot of river	None		Operated from 1876 until 1916. Killed by the Great Depression.	This facility would have generated and discharged significant volumes of the types of contaminants found in river sediments, but no longer exists with no successor organizations.
16	Detroit Ship Building Company, Dry Dock Engine Works, Detroit Sheet Metal & Brass Works	Lake & Ocean Ships, marine engines & Boat Fixtures	Orleans Street at foot of Detroit River	MDNR		PCB soil contamination and remediation. Now DNR Outdoor Adventure Center.	Detroit Ship Building Company was awholly owned subsidiary of American Ship Building Company that went bankrupt in 1993.
17	Sherwood Brass Works (Pentair Corp.)	Marine Pumps	6331 East Jefferson Ave.	Pentair Corp.	5500 Wayzata Blvd #600 Minneapolis, MN 55416	Sherwood water pumps & parts	Facility closed, but brand name owned by Pentair and still produced.
18	Dalzen Tool and Mfg. Co. (Bedco Co.)	Tool manufacturer	511 Leib Street	Bedco Co.	4600 Bree Rd., East China, MI	WWII - Thread grinders, Ground thread taps, Tools, Broaches	Facility closed, moved to East China (St. Clair County).
19	Detroit Universal Duplicator Corp.	Tool manufacturer	253 St Aubin Street	None		WWII - Machine tool controls	Gone.
20	Apex Broach Co. Inc.	Broaching	2981 East Lafayette Street	Apex Broach	22862 Hoover Rd, Warren, MI	Broaching tools and machines	Facility closed, moved to Warren.

21	Chicago Pneumatic Tool Co.	Tool manufacturer	570 East Larned Street	None		Pneumatic hydraulic and electric tools	Rosie the Riveter pneumatic gun
22	Huck Manufacturing Company (Federal-Mogul, Thiokol, Alcoa)	Fastener Manufacturer	2480 Bellevue Street	Alcoa	3000 W. Lomita Blvd. Torrance, CA 90505	Aluminum rivets	Facility closed, but Huck products continue.
23	Cross Gear and Machine Co. (Cross & Trekker, Giddings & Lewis, Fives Group)	Tool Manufacturer	3250 Bellevue Street	Fives Group	142 Doty Street Fond du Lac, WI 54935	Automated machine tool manufacturerMilling, Boring, Gear chambering, Burring motors	Facility closed, but acquired through succession by Fives Group Giddings & Lewis largest tooling automation manufacturer in North America.
24	Detroit Standard Gear Co.	Boat Gear Manufacturer	742 Woodbridge Street	None		Bronze, steel & aluminum foundry, machining and hardening operations.	Gone.
25	Stroh Casting Company	Grey Iron Foundry	216 Chene Street	None		A 75-ton per day grey iron foundry producing automobile and tractor parts. Stroluminum Casting, an aluminum casting plant for cooking utensils may have been colocated.	Gone.
26	Detroit Gear & Machine Company (Borg-Warner)	Automobile Transmission, Gear & Clutch Manufacture	674 Woodbridge Street	Borg-Warner		Foundry, machining and hardening operations.	Facility closed, but acquired through succession by Borg-Warner Corporation who operated the facility for many years.
27	Frontier Iron Works (Northern Engineering Works, Pennsylvania Engineering Co., Crane manuf. & Service Corp., Konecranes)	Marine	210 Chene Street	Konecranes	4401 Gateway Blvd, Springfield, Ohio 45502	Started manufacturing marine engines (supplying Detroit Shipbuilding Co.) and moved to overhead gantry crane manufacturing. Chene Street factory closed in 1980 and demolished in 2014.	Facility closed, but acquired through succession by Konecrane (a Finish multinational) with \$3 Billion in annual revenues. Northern Engineering crane parts still made and sold.
28	Detroit Grey Iron Foundry	Grey Iron Foundry	282 Iron Street	None		Started out making nuts & bolts, then manufactured jigs, fixtures, dies, and castings for the auto business.	Gone.
29	Tompkins Printing Equipment Co.	Screw Manufacturer	545 West Larned Street	None		WWII - Aircraft cup screws, Bolts and turn buckles, Screw machine products	Gone.
30	Henry C. Hart Manufacturing Company	Foundry & Hardware Manufacturer	496-512 Franklin Street	None		Foundry and machining of a wide variety of hardware.	Gone.
31	East End Boiler Works	Boiler Manufacturer	255 St. Aubin	None			Gone.
32	Taylor Water Tube Boiler Company	Boiler Manufacturer	1440 Franklin	None			Gone.
33	Colonial Broach Co. (Colonial Tool Group)	Broaching Tool Manufacturer	147 Joseph Campau Ave.	None		WWII - Broaching machines	Gone.

34	Murphy Iron Works	Manufacturer of Marine and Stationary Engines	3198 Guoin	None			Gone.
35	Schulte Brothers Soap Factory	Soap Manufacturer	Franklin and Rivard Streets	None		Potentially a significant discharger, but not the type of contaminants identified in river sediments.	Gone.
36	Maria Plating	Plating	6317 Kercheval	None		Approximately .68-mile inland from river, up Mt. Elliot. Record date 2004, Ml Rule 201	Gone.
37	Nalco Chemical Co.	Waste Handling	7733 East Jefferson			Detroit Receiving Hospital	Contractor on-site. North of Belle Isle Bridge. No further action.
38	Stone Shop	LUST	1490 Franklin St.			Leaking UST (Gasoline)	minor source, not worth pursuing.
39	Hayes File Company (aka Hayes Grinding Service)	Tool Sharpening	1986 Franklin St.			Small machine shop, long history of metal grinding (oil use)but not much of a foot print.	Still exists and operates today.
40	International Metal Products Company	Plating	2130 Franklin St.	None		Metal fabricationplating?	Gone. No discernable records
41	Ambassador Steel	Rebar Supplier	1469 Atwater St.			Rebar? No info.	Gone. Open lot.
42	PPG Industries	Paint Supplier	1059 Beaufait St.			Warehouse/storage?	Gone
43	American Eagle Tobacco Company	Tobacco Products	47 to 53 Woodbridge	None		Would not have been a significant discharger to the detroit river	Gone.
44	Globe Tobacco Company	Cigar Maker	29-41 Atwater Street	None			Little HavanaNot likely to generate significant quantities of sediments, nor the contaminants of interest.
45	DuBrie Motor Co.	Boat Engines	425 Guoin Street	None		Another boat motor manufacturer.	Gone.

## 6.0 Conclusions

There are no active entities remaining in the Harbortown area with the potential of contributing significantly to the quantities or types of contaminants identified in Detroit River sediments. Current digital environmental records reveal a few small industrial activities, but also a relatively unusual concentration of gasoline dispensing stations (140 records) and dry cleaners (83 records). These enterprises are noteworthy because of their use of underground storage tanks and the potential for leaks and spills. Not all of these identified entities are currently active and most have not been identified as having caused leaks or spills; plus, much of the contamination currently found in the sediments are believed to be from old point sources. However, their sheer numbers in the relatively small Harbortown area (a little over 2 mile stretch of river front) may be important in understanding potential releases to the Detroit River, but are not significant contributors to sediments identified in the river.

Records indicate a very dense concentration of heavy industry existed in the Harbortown Area from roughly the mid-1800s through the mid-1900s. Most were relatively short lived, lasting only as long as the founder and driving force behind the enterprise was around (20-40 years) while a few had longevity and lasted for several generations (in the range of 100-years). The Harbortown Area is and was what would be referred to as a mixed use community with residential, commercial and industrial activities all collocated relatively haphazardly. The records indicate single family houses (small homes and mansions), apartment buildings, hotels, bars (a lot), butcher shops, retail stores, churches, cemeteries (one displaced by extension of Jefferson Avenue), recreational facilities, warehouses, stables, automobile repair shops, train stations and rail yards, docks and wharfs on the residential and commercial side. Industrial activities started with tanneries, saw mills, lumber yards, ship and boat building, furniture, wagon and carriage manufacturing and quickly moved to metal and chemical processing and manufacturing. What might be called heavy industry really started in the Harbortown Area around the period of the Civil War (1860s) and ended within 10 to 20 years following World War II (1950s and 60s).

It is the heavy industry that is the focus of identifying potential contributors of contaminated sediments found in the Detroit River. Importantly, sewer installation really began in earnest around 1860 with the rapid growth of Detroit in general and the Harbortown Area specifically. Sewers were designed as self-cleaning (the water flow would keep sediments suspended until discharge) and installed to convey sanitary, industrial and storm water by the most direct route to the Detroit River. There was no treatment until the 1940s. The abiding belief was that dispersion of contaminants in the river would provide decease and contaminant control.

Like those in other, older U.S. cities, Detroit's first sewers carried a combined wastewater flow consisting of storm water and sanitary waste. Sewers were intended to remove wastewater, not treat it. Wastewater was simply piped to the nearest receiving body of water—either the Detroit or Rouge River—where it was thought the water was capable of purifying and rejuvenating itself. In other words, "dilution is the solution."

This discredited belief still held some sway in the early years of the 20th century. Dr. Giuseppe Cao of the Reale Society Italiana d'Igien in Milan, Italy was quoted in a story that appeared in the December 7, 1904 Detroit News:

"...The water of lakes and rivers, even though infected with immense quantities of refuse materials, is purified spontaneously and after a certain time is freed from all infection and returns to its pristine condition..." <sup>1/2</sup>

Large quantities of industrial waste water were discharged (daily and continuously) directly to the Detroit River during the approximately 100-year period. Eventually, the Detroit River Interceptor (DRI) sewer was installed along Jefferson Avenue to intercept direct river discharges from around Connors' Creek down to the Rouge River (Delray), which was completed in 1937. The DRI was not immediately active and connections were phased-in over many years. River discharges continue to exist in the Harbortown area as Combined Sewer Overflows (CSO) to accommodate incidental high storm water flows. However, because of categorical pretreatment standards that apply to most industrial dischargers since the 1970s, it is unlikely that the periodic CSO discharges are contributing significant quantities of the types of contaminants identified in the river sediments.

It is entirely plausible that industrial discharges from a hundred years or more ago have resulted in sediments present along the shoreline of the Detroit River today. The relatively high velocity river flow has scoured the mid-channel areas and swept sediments to the banks where it has remained undisturbed by dredging and other shoreline activities. Mathematical models (computer models) developed in the mid-1900s to predict contaminant transport in riverine settings have been largely ineffective at describing Detroit River sediment transport. This is believed to be attributed to the models reliance on contaminants affixing to colloidal particles in the water column while contaminants in the Detroit River are generally large, heavy particles that settle out of the water column quickly without attaching to colloidal particles and do not transport far downstream. Harbortown industrial discharges included heavy metals, 'sand', grit, tar, oils, coal, and process vessel bottoms.

Potential sources of the types of contaminants found in the Detroit River sediments have been identified based on the volume of discharge and nature of operations at industrial facilities that existed in the Harbortown area. The primary sources identified are the Detroit-Michigan Stove Company (Welbilt), Uniroyal Tire Plant (Michelin), Detroit City Gas Company Coal Gasification Plant (DTE), Michigan Ammonia Works (DuPont), and Berry Brothers Paint & Varnish Plant (no successor identified). However, there were a lot of other industrial dischargers that have contributed to existing river sediments. Each of these other entities, taken individually may not represent a significant contributor of contaminants (by volume), but collectively they are significant. The many casting, machining, tool, boiler, pump, engine, railcar, wheel, automobile body, boat, ship, parts, and bits manufacturing enterprises all discharged waste water containing contaminants like those identified in existing river sediments. There were also discharges from major entities that may have resulted in significant quantities of contaminants, but not of the type identified in river sediments. These included breweries and pharmaceutical companies.

Many (most) of the 'smaller' contributing source entities have simply 'disappeared' with no identifiable successor organization. Some were merged, acquired or subsumed by other companies and continue on in part or whole elsewhere out of the Harbortown Area (i.e. American Car and Foundry Company, Sherwood Brass Works, Huck Manufacturing, Detroit Gear & Machine Company, Northern Engineering Works) . A few relocated outside the Harbortown Area and continue operations today (i.e. Detroit Elevator, Dalzen Tool and

Manufacturing Co., Apex Broach Co., Cross Gear and Machine Co.). The early days of the automobile industry saw enterprising manufacturers jumping into building automobiles or supplying parts to build automobiles. Some of these manufacturers were in the Harbortown Area and can be linked to what have become General Motors (Olds Motor Works) and Fiat Chrysler Automobiles (Wadsworth Manufacturing Company).

There are many more manufacturing entities that existed through the years in the Harbortown area than have been captured in this report. A representative cross section of the types of activities that existed has been presented. The potential significant contributors of the types of contaminants found in Detroit River sediments have been identified.

#### 7.0 Recommendations

The four (4) entities that have been identified as likely significant contributors of the types of contaminants found in Detroit River sediments should be contacted as priority Potential Remediation Partners. The Detroit-Michigan Stove Company (Welbilt), Uniroyal Tire Plant (Michelin), Detroit City Gas Company Coal Gasification Plant (DTE), and Michigan Ammonia Works (DuPont) are all existing and viable successor organizations to the industrial activities formerly operating in the Harbortown Area and have all participated in soil remediation performed at their respective sites. No successor organization has been identified for the Berry Brothers Paint & Varnish Plant.

Further, it is recommended that GM, and FCA be solicited for participation in remediation actions based on corporate citizenship. Although linkage to early dischargers can be established for both organizations, both have continued presence in Detroit and the immediate Harbortown area which may induce participation. The GM Headquarter at the Renaissance Center just west of Site and FCA has a major manufacturing center just east of the Harbortown Site.

Other identified existing and viable entities may be contacted, but participation is not likely. However, a couple large enterprises that supply to the autos may be influenced by GM or FCA participation (BorgWarner and Konecrane) None are currently present or active in the Harbortown area and those that have remained in the greater metropolitan Detroit area do not appear able to provide significant financial participation.

#### Handler Activities Summary:

U.S. importer of hazardous waste: Nο Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: Nο User oil refiner: No Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

EPA Region:

Classification: Conditionally Exempt Small Quantity Generator

Description: Handler: generates 100 kg or less of hazardous waste per calendar

month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from

the cleanup of a spill, into or on any land or water, of acutely

hazardous waste

#### Handler Activities Summary:

U.S. importer of hazardous waste: No Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: Nο Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: No User oil refiner: No Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

FINDS:

Registry ID: 110003672721

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access

additional FINDS: detail in the EDR Site Report.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

FEDERAL FACILITY HAZARDOUS WASTE DOCKET

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Historical Generators:**

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Date form received by agency: 06/05/2015

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

> LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Handler Activities Summary:

U.S. importer of hazardous waste: No Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: Nο Furnace exemption: No Used oil fuel burner: No Used oil processor: No User oil refiner: No Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

> LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

> > **EDR Hist Auto**

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110055448519

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

110003632837 Registry ID:

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste, RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Registry ID: 110007584471

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

### Universal Waste Summary:

Waste type: Pesticides
Accumulated waste on-site: Yes
Generated waste on-site: Yes

Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

FINDS:

Registry ID: 110003584620

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Property Description: The southeastern portion of the subject property consisted of the

Douglass Broom Factory along McDougall Avenue in 1884. In 1897, the factory had been razed and the subject property was unimproved. The southern portion of the subject building was constructed in 1905. The remaining portions of the subject building were constructed in 1910, except for the storefronts in the northwestern portion of the building (2970-2990 East Jefferson Avenue), which was constructed in 1925. The subject property was occupied by various manufacturing companies from

its construction in 1905 until the early 1970s. In addition, a printing company and book bindery occupied the first floor and basement of the subject property from the mid-1930s until the mid-1970s. An automobile sales and service company also occupied the

northwestern portion of subject property (2970 East Jefferson Avenue) from the mid-1920s until the late 1940s. Multiple commercial store fronts, including a drug store, restaurants, nightclubs, and hair salons have also occupied the subject building since the late 1930s.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

and treat, store, or dispose of nazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

> LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

FINDS:

Registry ID: 110003684442

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Historical Generators:** 

Date form received by agency: 09/03/1993

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Furnace exemption: No Used oil fuel burner: No Used oil processor: Nο User oil refiner: No Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

Waste code: D001

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport. and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:

U.S. importer of hazardous waste: No Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: Nο Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: Nο User oil refiner: No Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: Nο Used oil transporter: No

. Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

### Handler Activities Summary:

U.S. importer of hazardous waste: Nο Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: Nο User oil refiner: No Used oil fuel marketer to burner: No Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: No

Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access

additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

<u>Click this hyperlink</u> while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

U.S. importer of hazardous waste: No Mixed waste (haz. and radioactive): No Recycler of hazardous waste: No Transporter of hazardous waste: No Treater, storer or disposer of HW: No Underground injection activity: No On-site burner exemption: No Furnace exemption: No Used oil fuel burner: No Used oil processor: No User oil refiner: No Used oil fuel marketer to burner: Nο Used oil Specification marketer: No Used oil transfer facility: No Used oil transporter: Nο

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110003687715

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Historical Generators:** 

Date form received by agency: 08/18/1980
Site name: SUNOCO INC

Classification: Conditionally Exempt Small Quantity Generator

Waste code: D001

FINDS:

Registry ID: 110003577264

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Description: Standard and other historical sources were able to document that the

subject property was residential from at least 1884 until a foundry building was constructed between 1906 and 1911. The foundry building was demolished between 1922 and 1937, when the current building was constructed. Historical records document the former occupants of the subject property consisted of a foundry from at least 1911 until at least 1922; a paper warehousing company from at least the 1940s through the 1970s; Staff Industries, a manufacturer likely associated with the automotive industry from at least 1980 until warehouse

operations began in 2003.

FINDS:

Registry ID: 110003582873

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

#### AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

**EDR ID Number** 

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**EDR ID Number** 

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Historical Generators:** 

Date form received by agency: 06/08/1995

Site name: FIRST NATIONAL BUILDING Classification: Large Quantity Generator

. Waste code: D001

Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Historical Generators:** 

Date form received by agency: 04/16/1992

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

#### SUPERFUND (NON-NPL)

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

# **GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/13/2018 Date Data Arrived at EDR: 05/30/2018 Date Made Active in Reports: 06/22/2018

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/13/2018 Date Data Arrived at EDR: 05/30/2018 Date Made Active in Reports: 06/22/2018

Next Scheduled EDR Contact: 10/15/2018 Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# **GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Next Scheduled EDR Contact: 10/15/2018 Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/18/2018 Date Data Arrived at EDR: 05/30/2018 Date Made Active in Reports: 06/22/2018

Number of Days to Update: 23

Telephone: 800-424-9346 Last EDR Contact: 07/06/2018

Next Scheduled EDR Contact: 10/15/2018 Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 05/18/2018 Date Data Arrived at EDR: 05/30/2018 Date Made Active in Reports: 06/22/2018

## RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018 Date Data Arrived at EDR: 03/28/2018 Date Made Active in Reports: 06/22/2018

## RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018 Date Data Arrived at EDR: 03/28/2018 Date Made Active in Reports: 06/22/2018

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018 Date Data Arrived at EDR: 03/28/2018 Date Made Active in Reports: 06/22/2018

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018 Date Data Arrived at EDR: 03/28/2018 Date Made Active in Reports: 06/22/2018

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## Local Lists of Hazardous waste / Contaminated Sites

MI INVENTORY: Inventory of Facilities

The Inventory of Facilities has three data sources: Facilities under Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA) identified through state funded or private party response activities (Projects); Facilities under Part 213, Leaking Underground Storage Tanks of the NREPA; and Facilities identified through submittals of Baseline Environmental Assessments (BEA) submitted pursuant to Part 201 or Part 213 of the NREPA. The Part 201 Projects Inventory does not include all of the facilities that are subject to regulation under Part 201 because owners are not required to inform the Department of Environmental Quality (DEQ) about the facilities and can pursue cleanup independently. Facilities that are not known to DEQ are not on the Inventory, nor are locations with releases that resulted in low environmental impact. Part 213 facilities listed here may have more than one release; a list of releases for which corrective actions have been completed and list of releases for which corrective action has not been completed is located on the Leaking Underground Storage Tanks Site Search webpage. The DEQ may or may not have reviewed and concurred with the conclusion that the corrective actions described in a closure report meets criteria. A BEA is a document that new or prospective property owners/operations disclose to the DEQ identifying the property as a facility pursuant to Part 201 and Part 213. The Inventory of BEA Facilities overlaps in part with the Part 201 Projects facilities and Part 213 facilities. There may be more than one BEA for each facility.

Date of Government Version: 04/23/2018 Date Data Arrived at EDR: 04/25/2018 Date Made Active in Reports: 06/27/2018

Next Scheduled EDR Contact: 08/06/2018 Data Release Frequency: Quarterly

MI PART 201: Part 201 Site List

A Part 201 Listed site is a location that has been evaluated and scored by the DEQ using the Part 201 scoring model. The location is or includes a "facility" as defined by Part 201, where there has been a release of a hazardous substance(s) in excess of the Part 201 residential criteria, and/or where corrective actions have not been completed under Part 201 to meet the applicable cleanup criteria for unrestricted residential use. The Part 201 List does not include all of the sites of contamination that are subject to regulation under Part 201 because owners are not required to inform the DEQ about the sites and can pursue cleanup independently. Sites of environmental contamination that are not known to DEQ are not on the list, nor are sites with releases that resulted in low environmental impact.

#### MI DEL PART 201: Delisted List of Contaminated Sites

A deleted site has been removed from the Part 201 List because information known to the DEQ at the time of the evaluation does not support inclusion on the Part 201 List. This designation is often applied to sites where changes in cleanup criteria resulted in a determination that the site no longer exceeds any applicable cleanup criterion.

A delisted site has been removed from the Part 201 List because response actions have reduced the levels of contaminants

to concentrations which meet or are below the criteria for unrestricted residential use.

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

## Local Land Records

#### MI LIENS: Lien List

An Environmental Lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 USC \* 9607(1) and similar state or local laws. In other words: a lien placed upon a property's title due to an environmental condition

Data Release Frequency: Varies

## LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

#### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

#### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

#### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

#### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.
