1.0 Executive Summary

This investigation was performed to identify Potential Remediation Partners (PRPs) that may be recruited to participate in activities associated with remediating contaminated sediments. Contaminated sediments in the Detroit River have been identified as a significant contributor to beneficial use impairments (BUIs). The target of the investigation was to identify non-Federal entities that may have engaged in activities that could have contributed to the contaminated sediments or that may have a direct interest in particular areas of the Detroit River. The objective of the investigation is to identify PRPs that may have interest in participating in a Great Lakes Legacy Act project.

The McLouth-Grosse Ile Shoreline Site extends from the mouth of the Monguagon Creek/Bridge Road (bridge to Grosse Ile) in the north downstream to the mouth of the Elizabeth Park Canal and bounded by the mainland on the west and Grosse Ile on the east forming what is referred to as the Detroit River Trenton Channel. The mainland shoreline area along this stretch of river falls within the City of Trenton and is largely industrial with some residential while the Grosse Ile shoreline is primarily residential.

The Elizabeth Park Canal Site is the artificial canal that separates “Slocum Island” from the Michigan mainland. The north end of “Slocum Island” has been converted into a county park (Elizabeth Park) and the south end (separated by the Grosse Isle Parkway) is occupied by the DTE Trenton Channel Power Plant. Elizabeth Park Canal falls fully within the city limits of Trenton, is bounded by the Detroit River (Trenton Channel) to the east, and terminates just to the north of the Detroit River International Wildlife Refuge.

The five (5) of the six (6) entities that have been identified as likely significant contributors of the types of contaminants found in McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site sediments should be contacted as priority Potential Remediation Partners. The Levy Plants #4 & #5 (Edward C. **Levy** Company), Detroit Edison Trenton Power Plant (**DTE**), Solutia Chemical Plant (**Eastman**), Trenton Engine Plant (**FCA**), and Mobil Oil Refinery (**ExxonMobil**) are all existing and viable entities currently operating in the McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site areas or have identified successor entities. The McLouth Steel Company is gone with no viable successor entity readily identifiable.

2.0 Introduction

The Great Lakes are one of the most important natural resources in North America. Contamination from urban development, agricultural run-off, and industrial activity over the years has adversely affected water quality. Several areas within the Great Lakes where resources have limited beneficial uses have been designated as Areas of Concern (AOCs).

Congress authorized the Great Lakes Restoration Initiative (GLRI) to leverage clean-up of Great Lakes AOCs and restore beneficial uses. Under GLRI is the Great Lakes Legacy Act (GLLA), a program to address contaminated sediments in Great Lakes AOCs.

To date, 20 GLLA projects have been completed throughout the Great Lakes. Over 4 million cubic yards of sediment at twenty sites have been cleaned-up providing significant water quality improvement around the Great Lakes. The program has leveraged over \$266M from States, Industries, and Natural Resource Damage Assessments.

Congress created GLLA as a cost-share program. All GLLA projects must involve the participation of non-federal sponsor(s) or partner(s) contributing a minimum 35% of the overall response action. Participation can be through contributions of cash or like kind service.

US EPA has worked with over 37 industries and a variety of other non-Federal partners so far on GLLA projects throughout the Great Lakes.

The Detroit River is a Great Lakes AOC. A key concern driving impairments to beneficial use of the Detroit River is contaminated sediments.

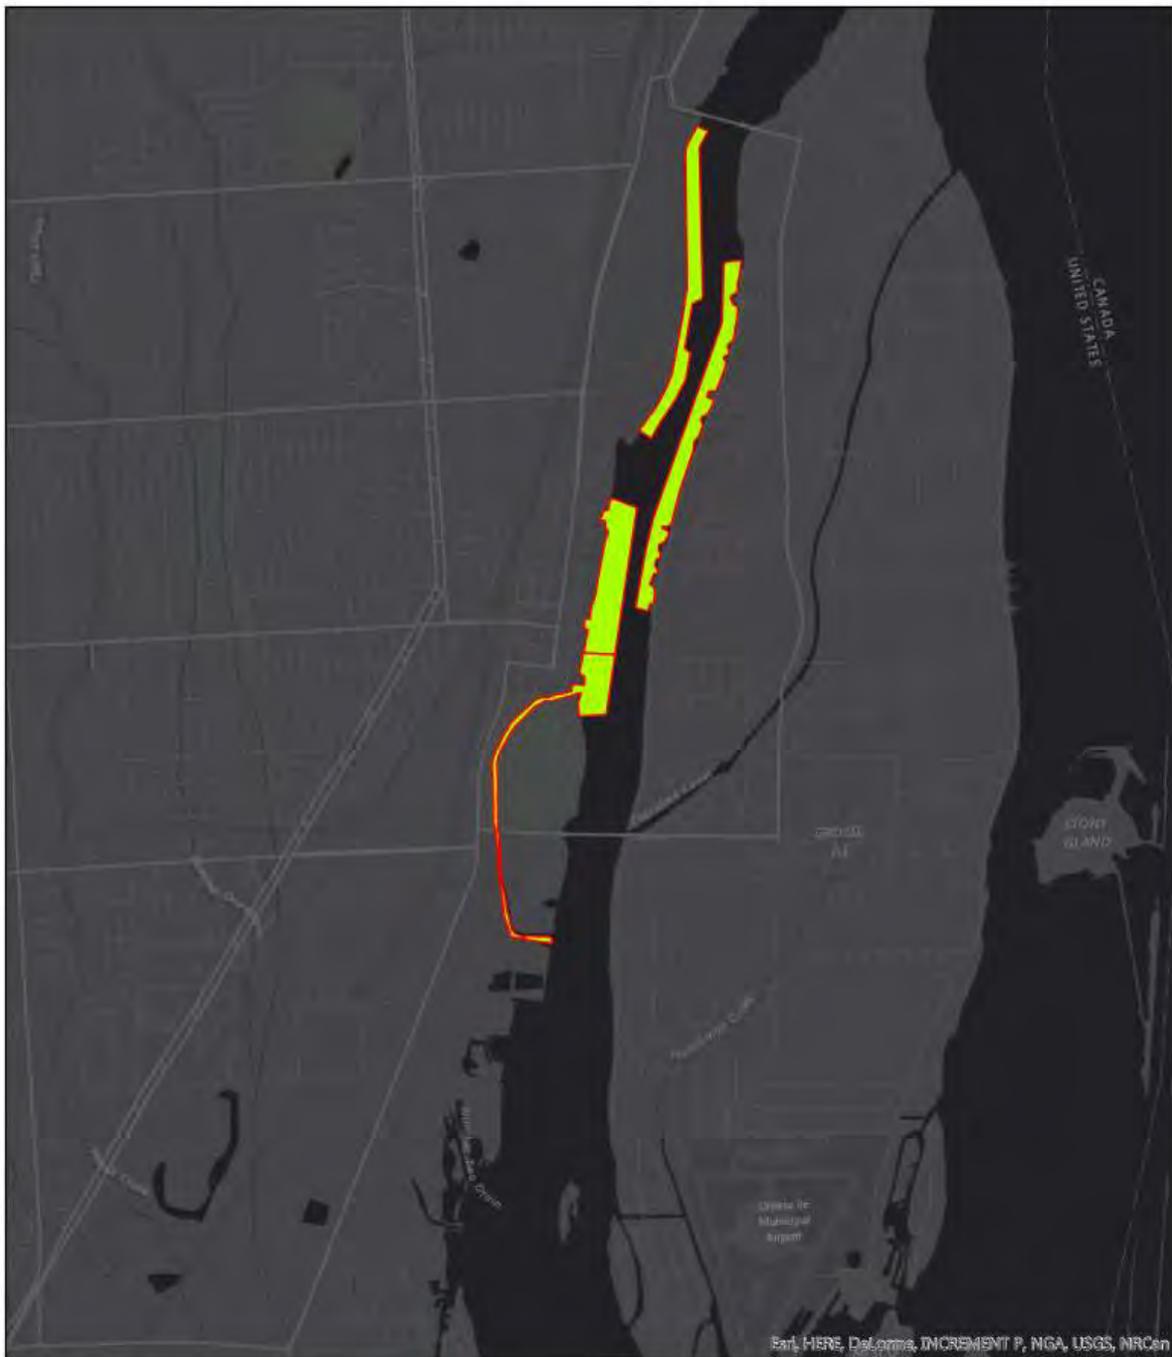

The Michigan Department of Environment, Great Lakes, and Energy (EGLE) in cooperation with US EPA Great Lakes National Program Office (GLNPO), and Detroit River Public Advisory Committee (PAC), initiated an effort to define “known contaminated sediment sites” in the Detroit River. From 2013-2016, USEPA GLNPO completed five contaminated sediment site characterizations within the Detroit River (Figure 1) in areas identified by the PAC. The effort resulted in the delineation of six “sediment target sites”. The target sites are identified as: Harbortown; Riverbend; River Rouge-Ecorse Shoreline; McLouth/Grosse Ile Shoreline; Elizabeth Park Canal; and, Gibraltar Canals.

This report addresses two separate clean-up sites; the McLouth/Grosse Ile Shoreline Site and Elizabeth Park Canal Site (Figure 2) and is intended to identify entities that have or had a presence in the area and may have contributed sediments in the Detroit River. Many have benefited over the years from use of the natural resource provided by the Detroit River. These entities may be potential partners in addressing sediment issues in the Detroit River. Participation is strictly voluntary. Additional information on the GLLA can be found on the EPA website at

<https://www.epa.gov/great-lakes-legacy-act/about-great-lakes-legacy-act>

3.0 Methodology

This investigation is performed to identify Potential Remediation Partners (PRPs) that may be recruited to participate in activities associated with remediating contaminated sediments. Contaminated sediments in the Detroit River have been identified as a significant contributor to beneficial use impairments (BUIs). The target of the investigation is to identify non-Federal entities that may have engaged in activities that could have contributed to the contaminated sediments or that may have a direct interest in particular areas of the Detroit River. The objective of the investigation is to identify PRPs that may have interest in participating in a Great Lakes Legacy Act project.

This investigation is conducted by reviewing existing data and information identified through available sources. References are included in Section 8 of this report. No new data is created through site investigations, sampling or analytical work by this effort. Digital records are the primary source of data and information, supplemented with printed material that may be identified during the course of the investigation. Professional judgment is used to evaluate the relevance of data and information in identifying PRPs. The review methodology involves a process to identify and collect information that generally progresses as follows;

- The target area of sediment contamination is identified within the AOC. Information is obtained describing the general volume and character of the sediment contamination. This information is made available by USEPA, State partners, and other team members that may be involved at the initial stage of the investigation. Other relevant information and/or anecdotal observations that might suggest avenues of further inquiry are often provided at initiation of the investigation. Sediment characterization reports are valuable in identifying specific contaminants and the types of activities that may have generated them.
- Web-based open-source mapping (e.g. Google Maps, Yahoo Maps, MapQuest, Bing Maps, National Geographic Maps) of the target area is reviewed with both street map and satellite imagery. These maps are useful in identifying current land use and entities adjacent to the target area.
- A preliminary web search is performed for entities identified during the investigation initiation and open-source map searches. Web sites often exist that contain information on the nature of activities performed by the entity at the site, history of the entity and site activities, key operating personnel, contact information, financial status, community and environmental principles, prior site owners, and more. This information may be useful in evaluating the entity's potential contribution of contaminants to sediments and viability as a PRP.
- A search area is designated adjacent to the target sediment area that is reasonably likely to have (or had) entities that could have contributed contaminants. An electronic data searching service (i.e. EDR) is engaged to locate and provide information on all entities within the designated search area with an environmental record or 'foot-print'. Virtually all publicly searchable data bases maintained by Federal, State, Tribal and Local

environmental jurisdictions are searched to identify entities that have a record of air, water, waste, and/or environmental management activities within the designated search area. See Figure 3 EDR Corridor Report (presented at the back of this report because of its size) for search results related to the McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site and a complete listing of government data bases searched (Page GR-1). Further, EDR maintains several proprietary data bases with environmental information to supplement the public data base searches. These records are useful in identifying entities, the nature of their activities and sometimes contact information. It is often the case that hundreds or even thousands of records are identified. In this particular case, 991 pages of environmental records were identified. Professional judgment is used to screen out those entities that have minimal potential as candidate PRPs. Follow-on web searches for the remaining identified entities are often performed to obtain additional information to support evaluations of the candidate PRPs.

- In addition to data files, historical imagery is used to supplement information on the search area. Historical aerial photos, topographic maps and Sanborn Fire Insurance Maps are provided in digital format often from the early 1900's to present. See Figure 4 for aerial photographs of the search area (presented at the back of this report because of its size) from 1937 through 2014 (14 photos). Results of the Sanborn Map search may be found in Figure 5 (presented at the back of this report because of its size). These images can be useful in evaluating land use over time and may indicate entities not captured in the data records.
- Professional judgment is used to evaluate all identified entities. Evaluation criteria include 1) does the nature of the entities activities suggest they could have contributed contaminants to the sediments, 2) Is it possible that activities could have generated volumes of contaminants for a duration that could represent a significant contribution to the existing sediments, 3) Does the entity (or successor entity) exist now, and 4) Does the entity appear to possess the resources (financial or other) needed to contribute to remediation activities. The evaluation criteria are informed by further web searches of entity sponsored sites, news articles, library sites, trade association sites, and others.
- A final evaluation is performed to assess a candidate PRP's likelihood to participate. This is largely based on professional judgment and informed by the entity's environmental track record, stated environmental and community commitments, apparent availability of necessary resources, and potential for independent response liability.

4.0 History of each site^{a/ b/ c/ d/e/f/}

This project involved evaluation of six targeted areas located along the Detroit River Area of Concern (AOC) identified for possible contaminated sediment remediation. The McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site are two of these areas. It is the industrial activity that is the focus of this inquiry to identify potential sources of river sediment contamination. The two separate sites have been evaluated together because river hydraulics make it likely that activities upstream of Elizabeth Park Canal have contributed significantly to sediments identified in the canal.

The McLouth-Grosse Ile Shoreline Site extends from the mouth of the Huntington Creek/Bridge Road (bridge to Grosse Ile) in the north downstream to the mouth of the Elizabeth Park Canal and bounded by the mainland on the west and Grosse Ile on the east forming what is referred to as the Detroit River Trenton Channel. The mainland shoreline area along this stretch of river falls within the City of Trenton and is largely industrial with some residential while the Grosse Ile shoreline is primarily residential.

The Elizabeth Park Canal Site is the artificial canal that separates “Slocum Island” from the Michigan mainland. The north end of “Slocum Island” has been converted into a county park (Elizabeth Park) and the south end (separated by the Grosse Isle Parkway) is occupied by the DTE Trenton Channel Power Plant. Elizabeth Park Canal falls fully within the city limits of Trenton, is bounded by the Detroit River (Trenton Channel) to the east, and terminates just to the north of the Detroit River International Wildlife Refuge.

The early development of industry in the Trenton area was tied to the river and mostly separate from developments in Detroit. Mostly separate because of distance. Until the early 1900s Trenton was about a one-day journey from Detroit in the north and Monroe in the south making it an ideal stopping point for travel between the two cities. However, the distance was too great for Trenton to participate in (and benefit from) the early tool making, machining, metal working and emerging industrial enterprises of Detroit throughout the mid-to-late 1800s and even the early 1900s. That would of course change by the mid-1900s, and most of the subsequent industrial development was and is closely tied to the greater Detroit area industries (i.e. the automobile).

Throughout the early and mid-1800s, the Trenton area industry followed the ‘normal’ pattern of Detroit River development. The first industry was the saw mills followed by ship/boat building. The lush old growth oaks in the area were harvested and put to use building ships. By the mid-1800s the trees were largely harvested, ships were converting to metal hulls, and the mills and ship yards closed. During the late 1800s, the Sibley limestone quarry was opened which sparked a housing boom as immigrant workers (mostly Italian) were brought in to work the quarry. Most of the limestone quarried ended up in buildings in Detroit. When the high-quality limestone ran out the quarry was used to make baking soda and finally, today as a landfill.

By the 1920s a new Detroit Edison power plant was being constructed at the edge of the Trenton Channel (for ship deliveries of coal) and further inland an oil refinery (Mobil) was built (to make gasoline and other petroleum derived products needed for automobile use and manufacture).

In the mid-1900s, industrial development really took off. The availability of relatively large tracts of land along the river front attracted automobile support industries. A major steel mill (McLouth) took up most of the Trenton shoreline in the late 1940s (supplying steel primarily to the automobile industry). Other enterprises established around the same time included two chemical plants (Solutia & Chrysler), an automobile engine plant (Chrysler), a casting plant (Vulcan), a forging plant (Trenton), and a slag processing plant (Levy) to support the steel mill. Most of these enterprises are gone and the area is struggling to find re-development opportunities. All of these activities would have discharged waste water (directly or indirectly) to the Detroit River. Municipal waste water treatment facilities were added in Trenton and on Grosse Ile in the 1960s. Prior to the municipal treatment systems, sewers would have direct discharged to the river.

Target areas located along the Detroit River AOC have been established to create manageable sections of contaminated sediments to evaluate for potential remediation. The McLouth-Grosse Ile Shoreline Site begins at the northern bridge (Grosse Ile toll bridge, Bridge Road) between the mainland and Grosse Ile. The Upper Trenton Channel (UTC) Great Lakes Legacy Act site is immediately upstream of the bridge. Contaminated sediments discharged by industry to the UTC have likely (certainly) impacted downstream sediments, although historic local point sources are considered to be the primary source of the legacy contaminants remaining in the sediments today. The UTC industries include; Arkema, BASF, DuPont, DTE, Levy, Firestone, Wyandotte Electric, Halowax-Union Carbide, Grasselli, Wayne Co. WWTP, and others. These industries were evaluated and summarized in a separate report and have not been repeated here.

Similarly, the Elizabeth Park Canal Site picks-up at the downstream end of the McLouth-Grosse Ile Shoreline Site. Contaminated sediments discharged by industry immediately upstream of the Elizabeth Park Canal have likely (certainly) impacted canal sediments. Open channel hydraulics make it a certainty that contaminants from McLouth Steel Mill, E.C. Levy Plant #4 & #5, and Mobil Oil (located immediately upstream) as well as others would be drawn into the Elizabeth Park Canal. Consequently, these two separate sites (McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site) have been evaluated together.

It is likely that discharges from the past, even distant past, may have contributed significantly to sediments in the river that exist today. Most common predictive flow models have failed to adequately describe contaminant transport in the Detroit River. Inquiries have revealed that typical Detroit River sediments result from larger, heavier particles than most flow models tend to predict. Consequently, discharges of larger, heavier particles along the Detroit River fall out of the water column quicker and would deposit along the bank out of the fast flowing mid-river channel. These sediments would remain until or unless disturbed by dredging.

Further, flow entering the artificial Elizabeth Park Canal from the Trenton Channel is drawn in from the shoreline edge entraining sediments from upstream sources and redepositing within the canal. Consequently it is likely that sediments identified within the reach of the Elizabeth Park Canal contain contaminants from sources such as McLouth Steel, Levy Plant #4 & #5, and Mobil Oil, which are immediately upstream. Direct discharges from sources within the Elizabeth Park

Canal also contributed to contaminated sediments identified (i.e. Trenton Engine Plant, Trenton Channel Power Plant, Solutia Chemical Plant, and Trenton Municipal WTP).

There are three (3) entities that emerged from the history of industrial activity that had the potential of contributing significantly to contaminated river sediments identified in the McLouth-Grosse Ile Shoreline Site; 1) McLouth Steel Mill, 2) E. C. Levy Plant # 4 & #5, 3) Mobil Oil Refinery. Similarly, there are six (6) entities identified that had the potential of contributing significantly to contaminated sediments within the Elizabeth Park Canal Site; 1) McLouth Steel Mill, 2) E. C. Levy Plant # 4 & #5, 3) DTE Power Plant, 4) Solutia Chemical Plant, 5) Trenton Engine Plant, and 6) Mobil Oil Refinery.

Of these dischargers, three (3) remain active in the area (Levy, DTE, and Chrysler (FCA)) and two (2) of these entities are gone and may have legacy liability protections that would make participation in sediment remediation activities unlikely.

All six (6) of these entities discharged untreated (or inadequately treated) process waste water directly (or indirectly through Elizabeth Park Canal) into the Detroit River Trenton Channel. See Historic Map 1 for the locations of many of these outfalls. Many of the processes used would involve discharges including oils, greases, and metals in significant volumes over a multi-year duration. The following describes many of the sources that operated in the McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site throughout the years of industrial activity and provides an assessment of their potential as sediment remediation partners. See Figure 6 for the locations of identified potential remediation partners.

McLouth Steel (Detroit Steel Co., MSC Land Co., Crown Enterprises) ^{g/h/}

Figure 7 – McLouth Trenton Steel Mill

McLouth Trenton Steel Mill in the 1950s, view is from the south looking northeast. Grosse Ile is in the upper right, Jefferson Ave. is on the left.

McLouth Steel Company began constructing its second steel mill on 273-acres in Trenton in 1948 with significant financial backing from General Motors (who was looking to improve/increase its steel supply base). The facility began initial operation in 1949 and continued to add capabilities and expand capacity until it was a fully integrated and functioning steel mill by 1954. McLouth was always innovative in production processes and invested heavy in new technology throughout the years. The Trenton steel mill at 1491 West Jefferson Avenue became one of the largest and most modern facilities in the US and specialized in stainless steel production. See Figure 7 for an aerial photo of the steel mill shortly after construction.

The McLouth mill once operated a vast array of metal processing equipment, some of which is summarized below;

Iron Making - two blast furnaces, sinter plant, three ore bridges, and an ore yard

Steelmaking - oxygen process shop including three 60 ton vessels and five 110 ton vessels

Melt Shop - four 60 ton electric arc furnaces and two 200 ton electric arc furnaces

A.O.D shop - three argon oxygen decarburization vessels

Continuous Casting - the first straight stick slab casting machine in America

Hot Strip Mill

Furnaces - soaking pits, 5 two hole batteries; reheat furnaces, two conventional three zone, natural gas furnaces, eighteen induction slab heating furnaces, and a walking beam furnace

Rolling - blooming mill, roughing mill, six stand rolling mill, four high mill stand, and two down-coilers

Finish Departments - pickle line, and five slitters

Hard times followed many years of successful operation and McLouth went out of business in 1995. The plant was sold in 1996 to Detroit Steel Company. Up to the early 2000s, Detroit Steel primarily brought in outside steel, pickled it, and sold it. After several failed start-up attempts, the Trenton complex remains idle. Incremental demolition of the complex began in 2005 and continues today.

In 2000, Detroit Steel Company sold the 76-acre northern portion of the facility to Manuel J. Maroun, who transferred title through Crown Enterprises, Inc. to Riverview-Trenton Railroad Company. In 2017, Wayne County acquired 183 acres of the 197-acre southern portion through tax foreclosure. Wayne County then entered into a Purchase and Development Agreement with Crown. The U.S. Environmental Protection Agency, U.S. Department of Justice and Michigan Department of Environmental Quality have negotiated a proposed legal agreement called a “Settlement Agreement and Covenant Not to Sue” with Crown Enterprises, Inc. and MSC Land Co., LLC. The purpose of the ‘agreement’ is to relieve the new owners from past environmental liability provided certain extensive surface remediation is complete to allow site redevelopment.

The McLouth Trenton Steel Mill site has known environmental contamination. Significant quantities of PCB and PCB containing articles have been removed from the site by USEPA. Further investigations of potential PCB contamination of soil and other potential contamination on site has been stipulated in a Settlement Agreement involving the current site owner and USEPA/DOJ/MDEQ.

The McLouth Trenton Steel Mill generated significant quantities of the types of contaminants identified in the Detroit River and engaged in direct discharge of oily, heavy metal laden waste water for 46 years. The site had four (4) direct discharges to the Detroit River. An industrial waste survey conducted related to the Trenton Steel Mill during 1963 (with plant personnel participation) revealed staggering quantities of contaminants discharged to the Detroit River. The study indicated combined discharges up to more than 400 tons per day of solids, 1,840 gallons per day of oil, 1,500 pounds per day of lead, 1,162 pounds per day of zinc, 395 pounds per day of cyanide, and 418 pounds per day of copper (and others not listed here). To be clear, these values would be the maximums observed during the multi-day survey and average values were significantly lower, but still incredibly high. However, the data during the survey (when the plant had advance notice and was prepared) showed wide variation from day to day demonstrating lack of process control and making averaging of results almost nonsensical. The mill operated 24/7 year round. The survey narrative complemented the facility for significant improvements over a similar survey (and results) performed the previous year (1962). Clearly, the McLouth Trenton Steel Mill was arguably the most significant contributor of contaminants identified in Detroit River sediments in the McLouth-Grosse Ile Shoreline Site. It is also probable that McLouth Trenton Steel Mill contaminants are present in significant quantities in the Elizabeth Park Canal Site. See Figure 8 for aerial view of a McLouth Detroit River outfall.

McLouth Steel Company is bankrupt and gone. US EPA and MDEQ are negotiating with successor entities to limit environmental liability for legacy activities at the site. It is unlikely a viable remediation partner related to this steel mill can be located.

Figure 8 – McLouth Steel Detroit River discharge 1965

Edward C. Levy Company

Edward C. Levy established a steel mill support company from a trucking company in 1918. Starting with the Ford Rouge Steel Plant, Levy began by hauling steel slag from the mill. Levy quickly branched out and provided his services to other steel mills and began processing the slag into sub-base for road construction. Levy Plants #4 & #5 were established just south of the newly constructed McLouth Trenton Steel Mill at 83 Kings Street (or 1601 West Jefferson Ave.) along the Detroit River Trenton Channel in the early 1950s. Both Plants #4 & #5 have been removed from Levy's list of active processing sites.

Historical aerial photos of the area reveal a shifting pattern of material piles and roadways around the site with activity right down to the river edge. There appears to have been very little consideration over the years to preventing site run-off from entering the Detroit River. Although there still appears to be some activity on-site, the major slag processing would have ended with the shutdown of the McLouth Steel Mill in 1995. Over the almost 46-years of site activity processing steel mill slag and other wastes, it appears the site would have contributed significantly to the types of contaminants identified in river sediments. Edward C. Levy Company is an existing and viable privately held multi-national company.

Sibley Quarry Disposal Site (DTE) ^{iv}

Figure 8 – The Sibley Quarry

The site located at 803 Fort Street was originally operated as a limestone quarry since 1875. The limestone was used on many building facades in Detroit. As time went on, the quality of the limestone diminished for construction purposes and the mining operation was sold by Sibley to Austin Church in 1899. He used the limestone to make baking soda under the family's nameplate, "Arm & Hammer."

The sodium bicarbonate quarrying gave rise to multiple extractions of the enlarged pit flanked by Fort Street on the west and Jefferson on the east. Solvay Process Co. began ambitious operations there, and in 1912 brought John W. Foley from New York State to manage the Sibley Quarry, which became known as "Foleyville" because of its expansive manner and booming business.

The site was acquired by DTE in 1951 and has been operated as a landfill since acquisition. Over the life of the Landfill, it received Coal Combustion Residual (mainly fly ash with some bottom ash) from various DTE power plants. The Landfill is licensed to receive coal ash, sewage sludge incinerator ash, waste gypsum, kiln dust, and inert material. Limestone and dolomite were mined from the site to a depth of approximately 300 feet below grade level, with multiple setbacks. The Site is approximately 207 acres, of which approximately 92 acres is licensed as an active landfill area, 90 acres have received final cover, and the remaining 25 acres is not used for disposal. See Figure 8 for a current satellite image of the quarry area.

The operations at the site consist of three main activities; placement of fly-ash, continuous pumping of groundwater and storm water (to prevent the pit from filling), and treatment of pumped water before discharging into the Detroit River through a NPDES permitted outfall. The permit allows discharge to the Detroit River of up to 1,400 pounds per day of suspended solids and 1.9 pounds per day of copper.

It is unlikely that this facility contributed significantly to the types of contaminants identified in Detroit River sediments. DTE Energy remains an existing and viable entity with annual revenue over \$10 billion.

Vulcan Mold & Iron Company (Valley-Vulcan)

Figure 9 – Valley-Vulcan Mold Company

View from Fort Street looking east of the closed Valley-Vulcan plant in the early 1990s,

Vulcan Mold & Iron Company was an iron ingot casting plant located at 1251 Fort Street. Vulcan Mold & Iron Company was owned by Ampco, which also owned another foundry in Pennsylvania. The history of the plant tracks closely with that of McLouth Steel. Vulcan cast steel ingots (up to 100-tons each) from molten metal obtained from McLouth. See Figure 9 for a roadside photo of the Vulcan Plant shortly after its closing.

When continuous casting (coincidentally developed by McLouth) became widely adopted in the steel business, the demand for Vulcan castings dropped. Vulcan merged with Valley (another similar ingot caster impacted by the ‘continuous casting’ development) which was owned by Microdot. The Valley-Vulcan joint venture was executed in 1987. The Vulcan Mold & Iron plant in Trenton closed in 1988 (because McLouth stopped shipping steel to the plant and shipments from Great Lakes Steel Mill took too long...the metal cooled too much to work). Valley-Vulcan was in bankruptcy by 1990. No successor entity emerged. Microdot went out of business in 1993. Ampco is still around as a multi-national and in the metal processing business. The Vulcan Mold & Iron plant site has been partially cleared and is a listed Superfund Site. The property is now owned by Danou Enterprises (a real estate company).

Vulcan Mold & Iron Company could have generated the types of contaminants identified in Detroit River sediments, but no records indicating discharge have been identified.

Solutia Trenton Plant (Eastman)^{iv}

Figure 10 – Solutia Trenton Plant

A chemical factory was established in 1942 on 150-acres at 5045 West Jefferson Avenue by Solutia, Inc., a wholly owned subsidiary of Monsanto Company. The Solutia Trenton Plant straddles Jefferson Avenue. The east side of Jefferson to the foot of the Detroit River and north of Toledo Avenue up to the Elizabeth Park Canal was used for phosphate processing. West of Jefferson to the railroad tracks and north of Toledo Avenue up toward Van Horn is the inorganic chemical manufacturing operations. See Figure 10 for an aerial map image of the Solutia Plant area.

Solutia was spun-off from Monsanto in 1997. The Monsanto divestiture was in response to PCB litigation that was draining company resources. Solutia was acquired by Eastman Chemical Company in 2012. The Trenton Plant inorganic chemical operation manufactures Polyvinyl Butyral (PVB), the primary ingredient used in making the ‘plastic’ layer that is sandwiched between two panels of glass to make safety glass (used in automobiles and architectural glass). The PVB manufacturing was at the south end of the organic chemical operations. At the north side was the Saflex Operation where the PVB was manufactured into the thin clear ‘plastic’ layer that is used to make the safety glass. Naturally, the Trenton Plant product was largely supplied to automobile glass manufacturers. Declining demand for automotive glass and increased competition resulted in the Saflex Operation being discontinued, PVB continues to be produced and supplied to other sites.

The Trenton Plant also processed phosphates (the east side of the site) into phosphoric acid and a variety of other phosphate derivatives (mono sodium phosphate, disodium & trisodium phosphates, food grade calcium phosphate, and others). Phosphoric acid has a variety of uses, but importantly, it's used in the automobile industry to phosphate car and truck bodies before painting (for paint adhesion and corrosion protection). The Trenton Plant phosphoric acid was supplied primarily to the automobile industry. Again, declining demand and increased competition put stress on the plant. Solutia entered into a 50/50 joint venture with FMC (also a phosphoric acid manufacturer) in 2000 and called the new enterprise Astaris LLC. The idea was to exploit synergies and efficiencies between the two companies to improve their competitive position. The venture failed and the phosphate operations were closed in 2003 (and the buildings have now been demolished).

The phosphate processing activity involved 'burning' elemental phosphorous solution received at the plant by railcar tankers in furnaces and then reacting resulting slurry with other chemicals to manufacture the various phosphate products. Cooling water from the furnaces was dumped to the Elizabeth Park Canal and process waste water was dumped to an open ditch on plant property that flowed to two open impoundments for solids removal prior to discharge to the Detroit River Trenton Channel. Later a third impoundment was added. Although available records are unclear as to whether the impoundments were operated in parallel or series. The impoundments are still present at the site. *This enterprise is included here because of the discharge to the Elizabeth Park Canal, but the direct discharge to the Detroit River Trenton Channel had a significant contribution to downstream sediments as well. This site is also included in the Gibraltar Canals Target Area.*

An industrial waste survey conducted related to the Solutia phosphate operations during 1963 (with plant personnel participation) revealed total solids discharges to the Detroit River outfalls of about 13 tons per day, and phosphate at over 4.5 tons per day. There were also data for copper and magnesium of up to 10 pounds per day. The Elizabeth Park Canal outfall was also tested and results indicated over 10 tons per day of total solids and about 25 gallons per day of oil.

The third waste water impoundment was completed at the end of the 1963 survey and limited follow-up outfall sampling at the Detroit River outfalls was performed with the new impoundment in operation. Phosphate levels actually increased. Results reported phosphate discharge at 5 tons per day. Further, records indicate downstream foaming in the Detroit River was a major problem and often cause water intake issues for downstream industrial users. The foaming issue was attributed to the Solutia phosphate discharge.

Other records indicate waste handled/disposed by the Solutia operations included arsenic, barium, cadmium, chromium, copper, lead and zinc. One record indicates over 62 tons of arsenic being disposed of annually. It is unclear what the source of the arsenic was, but it may be reasonable to assume some arsenic may have been present in waste water discharged to the Detroit River, although sampling/testing for arsenic was not performed in the 1963 survey (nor in other records available for review).

The inorganic operations involve batch processing of chemicals reactors or "polykettles" with significant effort to recover lost product including air condensers and other measures. The

operations are a major source of VOC emissions (>100 tons per year) even after control using bio-filtration. Processes are regulated by air permits. Community odor complaints have been recorded. The industrial waste survey conducted during 1963 also included the inorganic operations. The primary concern with waste water from these operations is pH (acidic) and solids. The survey results revealed total solids of over 6 tons per day. The report also indicated the plant personnel were ‘over adding’ neutralizing lime during the survey to control pH in the discharge. Process control was questioned. The inorganic operations discharge to the Detroit River Trenton channel through a 36” pipe.

Site activity has been significantly reduced in recent years and now only involves PVB processing. Records are unclear as to whether river discharges remain and what levels of contaminants may exist. The site is identified as a closed RCRA TSD facility and has an extensive array of groundwater monitoring wells. Further, the site is subject to Michigan Part 111 rules, has been subject to multiple USEPA & MDEQ compliance inspections since 1983, and has received numerous violation notices over the years for a variety of concerns related to the TSD activities. In addition, records indicate the site has disposed of hundreds of pounds of mercury from process equipment back in the mid-1990s. This facility would have generated significant quantities of the types of contaminants identified in Detroit River sediments. Solutia is an existing and viable wholly owned Eastman enterprise with annual revenues over \$1 Billion (Eastman over \$9 Billion).

DTE Trenton Channel Power Plant (aka Trenton Stacks)

Figure 11 – DTE Trenton Power Plant

The Trenton Channel Power Plant was first fired up in 1924. It had 6 turbine generators with 13 coal-fired boilers. In 1950, a second plant started up at the same site and adjoined the first plant. It had two turbine generators, #7 and #8 that were fed by a total of 4 boilers. Finally in 1968, Unit #9 was placed in service fed by a single boiler. One 563-foot-tall smoke stack is used for Unit #9. Soon afterwards, another identical stack was erected. Both tall stacks remain. In the 1970s the original power plant generators were removed and building demolished, now only the newer Unit #9 remains. The plant is scheduled to be decommissioned in 2023. See Figure 11 for an aerial photo of the DTE Trenton Power Plant.

The power plant property is on the mainland surrounding West Jefferson Avenue (4695 W. Jefferson Ave.). The main building – the two-smokestack power station – and the coal yard are located on what is now technically the southern portion of Slocum's Island in the Detroit River Trenton Channel. The power plant shares this island with Elizabeth Park, which is separated from the facility by Grosse Ile Parkway. The Elizabeth Park Canal runs through the power plant property (which has activities on both sides of the canal).

Large quantities of water are required for boiler operations. River water is taken in, used, and returned to the Detroit River. Oily waste water, particularly during the early years of operation,

would be discharged directly to the river. It is possible that significant quantities of coal would have been spilled, dumped, and washed into the Trenton Channel. Coal delivered to the site by freighter from the Trenton Channel. Aerial photos reveal coal up to the bank of the Trenton Channel with minimal barrier to pushing, sliding, and washing into the river. Trace amounts of mercury, zinc, copper, boron, lead, arsenic, cadmium, chromium, and selenium are found in virtually all coal and fly ash.

Further, it is likely significant quantities of dielectric, lubricants, and coolant fluids were used at the power plant. PCB dielectric would have been the preferred fluid for electrical generators, switch gears, transformers, and high voltage cable jackets. It is likely that PCB dielectric would have been used at the power plant from construction in 1924 until perhaps as late as 1980 (when the sale was banned, 1979). DTE may have phased-out PCBs prior to or since the 1980s. However, it is probable that PCBs would have been released to the Detroit River from the power plants at least during the early years of operation, before the awareness of the dangers posed by PCB was known. See Figure 11 for an aerial view of the power plant.

The power plant is a major source of air emissions which are regulated by permit. Significant quantity of particulate emissions containing trace amounts of heavy metals (as listed above) would fall-out in the immediate area of the plant, particularly in the early days of operation before emission controls and the tall stacks were installed. The DTE power plant is a potentially significant contributor of the types of contaminants identified in river sediments. DTE Energy is an existing and viable entity with annual revenue over \$10 billion.

Mobil Oil Refinery (ExxonMobil)

Figure 12 – The Trenton Oil Refinery

Early view of the Mobil Trenton Refinery from the north looking south, West Road is in front and Allen Road is on the left

Socony Oil established the Trenton Refinery at the southwest corner of Allen Road and West Road in 1929. Crude oil was delivered by pipeline and the original refinery was capable of processing 5,000 barrels per day. Expansions increased the capacity of the Trenton Refinery up to 40,000 barrels per day by 1963. See Figure 12 for an early aerial photo of the oil refinery. By the 1980s operations were declining and the refinery was closed. The refinery was demolished in the 1990s and the site is now the Woodhaven Village Shopping Square.

So, names for the site can get confusing, but an unimportant curiosity. Standard Oil Company was broken-up in 1911 in an antitrust ruling. One of a bunch of smaller oil companies was Socony, who trademarked the name Mobil Oil. In the early 1930s Socony merged with Vacuum Oil and became Socony-Vacuum. In the early 1960s Socony-Vacuum changed its name to Mobil Oil (thankfully). So, by the time the Trenton Refinery closed, it was a Mobil Oil facility. In 1998 Mobil merged with Exxon to become ExxonMobil.

The Mobil Oil Trenton Refinery produced gasoline, naphtha, coke, #1 & #2 fuel oil, and lubricating oils. The Thermoform Continuous Catalytic Cracking Unit was the center of refinery. Gasoline was the main product with coke produced from the by-product tar a close second. Petroleum coke was manufactured in 140 ton batches from the tar producing a fine grade of coke sold for use in manufacturing high purity metallurgical electrodes.

The refinery generated over a million gallons per day of really dirty waste water. The refinery had waste water treatment mostly targeted at removing phenols and recovering oil for reuse. There was waste water settling ponds and storm water retention ponds on site. Waste water was discharged to the Trenton Channel in a submerged pipe...about 2-miles away just upstream of the Elizabeth Park Canal. An industrial waste survey conducted related to the Mobil Oil Trenton Refinery during 1963 (with plant personnel participation) revealed total solids discharges to the Detroit River Trenton Channel of up to 17 tons per day, phenols of 157 pounds per day, oil of over 150 gallons per day, and lead around 5 pounds per day with lesser amounts of chromium, copper and zinc.

Records also indicate that the Michigan Water Resources Commission issue a special Order of Determination to allow Mobil Oil Trenton Refinery to discharge 375 tons per day of salt to the Detroit River Trenton Channel. Although not clear in the records, it appears the discharge approval was for at least a year (1963 & 1964). The refinery was pumping ground water to empty underground caverns to store butane and propane.

This facility would have generated significant quantities of the types of contaminants identified in McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site sediments. The Trenton Refinery is gone, but ExxonMobil is an existing and viable enterprise with annual revenues over \$237 Billion (2017).

Chrysler Trenton Engine Plant (FCA)

Figure 13 – Chrysler Trenton Engine Plant

Chrysler Corporation established the Trenton Engine Plant on 136-acres at 2300 Van Horn Road, Trenton in 1952. A second engine plant was co-located at the site in 2010. The original plant is

designated the North Plant and the new facility is called the South Plant. The plants are in more or less constant states of change as new engine types and styles are introduced and phased-out depending on corporate needs for engines. See Figure 13 for an aerial photo of the Trenton Engine Plant.

The Trenton Engine Plant is a major user of a variety of oils, particularly lubricating and cooling oil used in machining. Engine manufacturing involves extensive wet machining which uses oil to cool the cutters and float away metal chips. Records indicate annual consumption of oils approaching 2 million gallons. The facility operates a waste water pretreatment plant to remove oils prior to discharge to the Trenton WWTP.

In addition, Trenton Engine Plant is a major source of air emissions and is regulated by permit. Air emissions are primarily attributed to dynamometer operations where engines produced are fueled with gasoline or diesel and test run (without emission controls). There is also extensive process ventilation to capture oil mist created by the many machining operations. Mist eliminators are used to reduce the amount of oil captured in the ventilation and may be returned to the plant or discharge outside the building. Oil is ubiquitous to engine manufacturing and the Trenton Plants are no exception. Significant quantities of oily, heavy metals laden waste water is generated by the machining operations.

The City of Trenton WWTP was not constructed until 1964, so even if Trenton Engine began diverting wastewater immediately to the new system, over 10-years of direct discharge to the Elizabeth Park Canal must have occurred. There is currently no record of an individual NPDES permit for the Trenton Engine site, but a general storm water permit does exist (the plant has outside storage yards storm water pipe(s) currently discharge to the Elizabeth Park Canal).

This facility could have generated significant quantities of the types of contaminants identified in the Elizabeth Park Canal Sediments. Chrysler has gone through several mergers and acquisitions since the Trenton Engine Plant was established and a Chapter 11 bankruptcy filing in 2009. The Trenton Engine Plant is now owned by Fiat Chrysler Automobiles (FCA). In a 2018 newspaper interview a spokesperson for FCA made clear the company's position on responsibility for legacy environmental concerns in response to waste discovered on former Chrysler Trenton Chemical Plant property;

Contacted for comment on the latest discovery, Fiat Chrysler Automobiles, the automaker that arose from Chrysler's merger with Fiat in 2011, e-mailed a statement: "Records indicate that the former Trenton Chemical site was deactivated and closed nearly 30 years ago by the now-dissolved Chrysler Corporation, which donated the property to the International Wildlife Refuge after the Michigan Department of Environmental Quality approved the completed environmental remediation conducted at the site. FCA US LLC has no connection to or responsibility for the site." (from a March, 2018 Detroit Free Press article).

Chrysler was paid \$1 million for the donated property and was required to clean-up the contamination left on site. FCA is an existing and viable entity with extravagant claims of environmental stewardship with annual revenues of \$133 Billion (2017).

Trenton Waste Water Treatment Plant (City of Trenton)^{1/}

The City of Trenton's Wastewater Treatment Plant has been in operation since 1964. The City operates an Activated Sludge Treatment Facility. On an average day 4.0 million gallons per day are treated with a design capacity of 6.5 million gallons per day. Belt filter presses and Landfill is used for sludge disposal. The plant consists of an aerated grit chamber, 5 primary settling tanks, 4 aeration basins, 4 final clarifiers, 1 chlorine contact chamber, 2 sludge thickening tanks, 2 sludge holding tanks and 2 belt filter presses. The City also operates 4 sewage lift stations, 1 emergency storm lift stations and 20.0 million gallon storage basin all located in various sections of the city. This modern facility is located on 5.5 acres at 1801 Van Horn Road, Trenton. (from the Trenton web site)

It is unlikely that this facility contributed significantly to the types of contaminants identified in Elizabeth Park Canal Site sediments.

Grosse Ile Waste Water Treatment Plant

It is unlikely that this facility contributed significantly to the types of contaminants identified in Detroit River sediments.

5.0 Potential Partner Identification for each site

Detroit River AOC – McLouth-Grosse Ile Shoreline & Elizabeth Park Canal Sites – Potential recruitment Partner Matrix

Map Key	Identified PRP	PRP Operation	PRP Address	Successor Entity	Address	Comments	Assessment
1	McLouth Steel	Steel Mill	1491 W. Jefferson Ave.	MSC Land Co & Crown Enterprises		Site closed and under negotiations with USEPA & MDEQ for surface clean-up and liability agreements.	This facility would have generated significant quantities of the types of contaminants identified in Detroit River sediments.
2	Edward C. Levy Plants #4 & #5	Slag Processing	83 Kings Street (or 1601 W. Jefferson Ave.)			Bulk material handling still appears to be performed on the site. Plants #4 & #5 no longer on the Levy list of active processing plants...would have ended with shutdown of McLouth in 1995.	This facility would have generated significant quantities of the types of contaminants identified in Detroit River sediments. Levy is an existing and viable enterprise.
3	DTE Sibley Quarry Landfill	Flyash Disposal	803 Fort Street			Limestone quarry used to dispose of boiler ash. Storm water and ground water pumped, treated and discharged to the Detroit River.	Not the type of activities that would have generated significant quantities of the type of contaminants identified in Detroit River sediments. DTE is an existing and viable enterprise.
4	Vulcan Mold & Iron Company	Steel Casting	1251 Fort Street	Ampco		Facility closed since 1988.	This facility could have generated the types of contaminants identified in Detroit River sediments, but no records indicating discharge have been identified. No viable successor entity.
5	Solutia Trenton Plant (Eastman)	Chemical Processing	5045 West Jefferson Avenue	Eastman		A major historical source of river sediments.	This facility would have generated significant quantities of the types of contaminants identified in Detroit river sediments. Solutia/Eastman is an existing and viable enterprise.
6	DTE Trenton Power Plant	Electrical Power Generation	4695 W. Jefferson Ave.			Coal powered electrical generating plant on the banks of the Detroit River Trenton Channel and Elizabeth Park Canal.	This facility would have generated significant quantities of the types of contaminants identified in Detroit River sediments. DTE is an existing and viable enterprise.
7	Mobil Oil Refinery	Oil Refinery	Allen Road and West Road	ExxonMobil		Two miles inland, but a direct pipe to the river.	This facility would have generated significant quantities of the types of contaminants identified in Detroit River sediments. ExxonMobil is an existing and viable enterprise.
8	Trenton Engine Plant	Engine Manufacturing	2300 Van Horn Road	FCA		Chapter 11 bankruptcy in 2009, legacy liability terminated?	This facility could have generated significant quantities of the types of contaminants identified in Detroit River sediments. FCA is an existing and viable entity.
9	City of Trenton WWTP	WWT	1801 Van Horn Road			Not likely to be a significant remediation partner.	It is unlikely that this facility contributed significantly to the types of contaminants identified in Detroit River sediments.
10	Grosse Ile WWTP	WWT				Not likely to be a significant remediation partner.	It is unlikely that this facility contributed significantly to the types of contaminants identified in Detroit River sediments.

6.0 Conclusions

The potential significant contributors of the types of contaminants found in McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site sediments have been identified. There are three (3) entities that emerged from the history of industrial activity that had the potential of contributing significantly to contaminated river sediments identified in the McLouth-Grosse Ile Shoreline Site; 1) McLouth Steel Mill, 2) E. C. Levy Plant # 4 & #5, 3) Mobil Oil Refinery. Similarly, there are six (6) entities identified that had the potential of contributing significantly to contaminated sediments within the Elizabeth Park Canal Site; 1) McLouth Steel Mill, 2) E. C. Levy Plant # 4 & #5, 3) DTE Power Plant, 4) Solutia Chemical Plant, 5) Trenton Engine Plant, and 6) Mobil Oil Refinery.

Some of the identified entities no longer exist. Viable successor entities exist for the Solutia Chemical Plant (Eastman), and the Mobil Oil Refinery (ExxonMobil). McLouth Steel Mill dissolved with no identifiable successor entity. Redevelopment of the former McLouth site is underway and USEPA & MDEQ are negotiating remediation actions and legacy liability limitations with the prospective developers. Chrysler Trenton Engine Plant has been succeeded by FCA. However, Chrysler went through Chapter 11 bankruptcy in 2009 which seemingly limits legacy environmental liability.

The abiding practice of early waste water management was to discharge sanitary, process, and storm water to the nearest river by the most direct route possible and that is how industrial sewers were constructed in the McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site. It was not until the 1960s that a viable municipal WWTP was constructed in Trenton. Significant discharges continued at least into the 1960s.

All of these entities discharged process waste water directly (or indirectly through the Elizabeth Park Canal) into the Detroit River Trenton Channel. Many of the processes used would involve discharges including oils, greases, and metals. Records exist for most of the entities identified that characterize and quantify the contaminants discharged into the river. For those sources without direct measurement records, it may be inferred with a great deal of confidence that their discharges contained the types of contaminants identified in sediments.

7.0 Recommendations

The five (5) of the six (6) entities that have been identified as likely significant contributors of the types of contaminants found in McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site sediments should be contacted as priority Potential Remediation Partners. The Levy Plants #4 & #5 (Edward C. Levy Company), Detroit Edison Trenton Power Plant (DTE), Solutia Chemical Plant (Eastman), Trenton Engine Plant (FCA), and Mobil Oil Refinery (ExxonMobil) are all existing and viable entities currently operating in the McLouth-Grosse Ile Shoreline Site and Elizabeth Park Canal Site areas or have identified successor entities. The McLouth Steel Company is gone with no viable successor entity readily identifiable.

FCA may be a particular challenge because of the 2009 Chrysler bankruptcy and stated position regarding any sense of responsibility for legacy environmental concerns. FCA should be approached from a corporate citizenship/community outreach perspective.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System
US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES)
is an federal online database for Brownfields Grantees to
electronically submit data directly to EPA.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access
additional FINDS: detail in the EDR Site Report.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Historical Generators:

FINDS:

Registry ID: 110003643807

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D002
- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- . Waste code: D003
- . Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 196305.7

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 35421.7

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

 Owner Address: 14100 Civic Park Dr
 Owner City,St,Zip: Riverview, MI 48193
 Owner Contact: Not reported
 Owner Phone: (734) 281-4270
 Country: USA
 District: Southeast MI
 Site Name: City Of Riverview, Dpw
 Latitude: 42.17385
 Longitude: -83.17524
 Date of Collection: 07/03/2008
 Method of Collection: GPS Code Meas. Standard Positioning Service SA Off
 Accuracy: 40
 Accuracy Value Unit: FEET
 Horizontal Data: NAD83
 Point Line Area: POINT
 Desc Category: Plant Entrance (Freight)

Leak Number: C-0921-94
 Release Date: 08/23/1994
 Substance Released: Gasoline
 Release Status: Closed
 Release Closed Date: 11/07/1995

Leak Number: C-1206-95
 Release Date: 11/07/1995
 Substance Released: Used Oil
 Release Status: Closed
 Release Closed Date: 11/07/1995

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 617785

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 489871

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003

. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D001
 . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Universal Waste Summary:

Waste type: Batteries
Accumulated waste on-site: Yes
Generated waste on-site: Yes

Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: Yes

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

FINDS:

Registry ID: 110003687083

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110003563705

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

FINDS:

Registry ID: 110003637618

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Historical Generators:

Date form received by agency: 06/05/1991

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110007580769

Environmental Interest/Information System

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Historical Generators:

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110003572704

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Historical Generators:

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Historical Generators:

Date form received by agency: 01/01/1980

FINDS:

Registry ID: 110003560263

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource

Owner Name: AHL Investments
Owner Address: 4407 Fort Street
Owner City,St,Zip: Trenton, MI 48183
Owner Contact: Not reported
Owner Phone: (313) 712-6116
Country: USA
District: Southeast MI
Site Name: Action Auto #70
Latitude: 42.12727
Longitude: -83.20107
Date of Collection: 01/11/2001
Method of Collection: Address Matching-House Number
Accuracy: 100
Accuracy Value Unit: FEET
Horizontal Data: NAD83
Point Line Area: POINT
Desc Category: Plant Entrance (Freight)

Leak Number: C-0433-92
Release Date: 03/19/1992
Substance Released: Gasoline,Diesel,Kerosene,Used Oil,Other
Release Status: Open
Release Closed Date: Not reported

FINDS:

Registry ID: 110043454703

Environmental Interest/Information System

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Date form received by agency: 03/15/1994
Site name: MCLOUTH STEEL, TRENTON PLANT
Classification: Large Quantity Generator

Date form received by agency: 01/31/1992
Site name: MCLOUTH STEEL-TRENTON PLANT
Classification: Large Quantity Generator

Date form received by agency: 02/28/1990
Site name: MCLOUTH STEEL-TRENTON PLANT
Classification: Large Quantity Generator

Date form received by agency: 11/18/1980
Site name: DETROIT STEEL COMPANY
Classification: Not a generator, verified

Property Description:	

The site was wooded land from at least 1937 to 1966. The site has been occupied by a shopping center with parking areas located east of the site building since 1967. A service driveway is located west of the site building. The occupants of the shopping center have included a grocery store, restaurants, and various retail stores. Based on a review of available historical information, there is no indication that a dry cleaner or any other tenant that uses significant quantities of hazardous substances or petroleum has occupied the site.

Property Description:	The site was wooded land from at least 1937 to 1966. The site has been occupied by a shopping center with parking areas located east of the site building since 1967. A service driveway is located west of the site building. The occupants of the shopping center have included a grocery store, restaurants, and various retail stores. Based on a review of available historical information, there is no indication that a dry cleaner or any other tenant that uses significant quantities of hazardous substances or petroleum has occupied the site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Date form received by agency: 11/11/1980
Site name: ARKEMA INC
Classification: Not a generator, verified

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Date form received by agency: 08/18/1980
Site name: ARKEMA INC
Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date Data Arrived at EDR: 05/30/2018	Telephone: N/A
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 07/06/2018
Number of Days to Update: 23	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 07/06/2018
Number of Days to Update: 92	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/18/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: 800-424-9346
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 07/06/2018
Number of Days to Update: 23	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 05/18/2018	Source: EPA

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: 312-886-6186

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

MI INVENTORY: Inventory of Facilities

The Inventory of Facilities has three data sources: Facilities under Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA) identified through state funded or private party response activities (Projects); Facilities under Part 213, Leaking Underground Storage Tanks of the NREPA; and Facilities identified through submittals of Baseline Environmental Assessments (BEA) submitted pursuant to Part 201 or Part 213 of the NREPA. The Part 201 Projects Inventory does not include all of the facilities that are subject to regulation under Part 201 because owners are not required to inform the Department of Environmental Quality (DEQ) about the facilities and can pursue cleanup independently. Facilities that are not known to DEQ are not on the Inventory, nor are locations with releases that resulted in low environmental impact. Part 213 facilities listed here may have more than one release; a list of releases for which corrective actions have been completed and list of releases for which corrective action has not been completed is located on the Leaking Underground Storage Tanks Site Search webpage. The DEQ may or may not have reviewed and concurred with the conclusion that the corrective actions described in a closure report meets criteria. A BEA is a document that new or prospective property owners/operations disclose to the DEQ identifying the property as a facility pursuant to Part 201 and Part 213. The Inventory of BEA Facilities overlaps in part with the Part 201 Projects facilities and Part 213 facilities. There may be more than one BEA for each facility.

Date of Government Version: 04/23/2018

Data Release Frequency: Quarterly

MI PART 201: Part 201 Site List

A Part 201 Listed site is a location that has been evaluated and scored by the DEQ using the Part 201 scoring model. The location is or includes a "facility" as defined by Part 201, where there has been a release of a hazardous substance(s) in excess of the Part 201 residential criteria, and/or where corrective actions have not been completed under Part 201 to meet the applicable cleanup criteria for unrestricted residential use. The Part 201 List does not include all of the sites of contamination that are subject to regulation under Part 201 because owners are not required to inform the DEQ about the sites and can pursue cleanup independently. Sites of environmental contamination that are not known to DEQ are not on the list, nor are sites with releases that resulted in low environmental impact.

MI DEL PART 201: Delisted List of Contaminated Sites

A deleted site has been removed from the Part 201 List because information known to the DEQ at the time of the evaluation does not support inclusion on the Part 201 List. This designation is often applied to sites where changes in cleanup criteria resulted in a determination that the site no longer exceeds any applicable cleanup criterion.

A delisted site has been removed from the Part 201 List because response actions have reduced the levels of contaminants to concentrations which meet or are below the criteria for unrestricted residential use.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2008
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

MI WDS: Waste Data System

The Waste Data System (WDS) tracks activities at facilities regulated by the Solid Waste, Scrap Tire, Hazardous Waste, and Liquid Industrial Waste programs.

Date of Government Version: 05/05/2018	Source: Dept of Environmental Quality
Date Data Arrived at EDR: 05/07/2018	Telephone: 517-284-6562
Date Made Active in Reports: 05/09/2018	Last EDR Contact: 05/07/2018
Number of Days to Update: 2	Next Scheduled EDR Contact: 09/03/2018
	Data Release Frequency: Varies

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date Data Arrived at EDR: N/A	Telephone: N/A
Date Made Active in Reports: N/A	Last EDR Contact: N/A
Number of Days to Update: N/A	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: N/A	Source: EDR, Inc.
Date Data Arrived at EDR: N/A	Telephone: N/A
Date Made Active in Reports: N/A	Last EDR Contact: N/A
Number of Days to Update: N/A	Next Scheduled EDR Contact: N/A
	Data Release Frequency: Varies

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Environmental Compliance Office Inc. were identified for the years listed below (selected maps only*). The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.
