1.0 Overview

The Toxics Release Inventory (TRI) State Data Files are a set of six files that collectively contain all the data that was submitted on the TRI Reporting Form R or Certification Statement (Form A) by facilities in a selected state. The data in these files has been extracted from the Envirofacts database system. The six files and their contents are as follows:

<u>File</u>	<u>Example</u>	<u>Description of Contents</u>	<u>Form R or A Reference</u>
Type 1	NY_1_2002_v01.txt	Facility data, Chemical identification and Uses data, Releases and Other Waste Management Summary Information	Part I (all), Part II (sections 1, 3, 4, 5, 6.1.A, 6.2ABC, 7B, 7C, 8.2.B,8.4.B,8.6.B)
Type 2A	NY_2A_2002_v01.txt	Detailed Source Reduction Activities and Methods	Part I (sections 1,2,4,5), Part II (sec. 1, 8.1 – 8.10)
Type 2B	NY_2B_2002_v01.txt	Detailed Waste Management	Part I (sections 1,2,4,5) Part II (sections.1, 7.A)
Type 3A	NY_3A_2002_v01.txt	Details of Transfers Off-Site	Part I (sections, 1,4,5) Part II (section 6.2)
Type 3B	NY_3B_2002_v01.txt	Details of Transfers to Publicly Owned Treatment Works (POTW)	Part I (sections 1,4,5) Part II (section 6.1)
Type 4	NY_4_2002_v01.txt	Facility Information Directory	Part I (sections 1,3,4,5)

The state data files are identified (named) by state, file_type, reporting year and version number.

File Name = State + File_Type + Reporting Year + Version number

For example, the file “NY_1_2002_v02.txt” is the Facility, Chemical, Releases and Other Waste Management Summary Information (File Type 1) for all facilities located in New York (NY) for reporting year 2002. The version number is “v01” meaning this file was created with Reporting Year 2002 data.

Likewise, file “NY_2a_2002_v02.txt” contains Reporting Year 2002 Detailed Source Reduction Activities and Methods data for the state of New York. It was created with Reporting Year 2002 data.

In addition to the set of files for each state, there are also 2 more file sets. There is a Federal file set (FED_1_2002_v02.txt, FED_2A_2002_v02.txt, etc.) which contains data on all government owned, contractor operated and federal sites. A third set of files, known as the National Data File set, contains all the TRI data for a specific year. The national data files are named US_1_2002_v02.txt, US_2A_2002_v02.txt, etc.

Many definitions relating to the State Data files refer to the TRI Form R and Certification Statement (Form A). These are the Forms that Facilities use to submit data to the TRI program. The document “Reporting Forms and Instructions for Reporting Year 2002” contains both forms and complete instructions on how to fill the forms out. The “Reporting Forms and Instructions” document can be found on the TRI Website at <http://www.epa.gov/tri/>, specifically on Reporting Materials and Guidance page at <http://www.epa.gov/tri/report/index.htm#forms>. In addition, complete lists of values for several of the data fields in the State Data Files can be found in the “Reporting Forms and Instructions” document.

1.1 Detailed Description: File Type 1

The “Type 1” file contains the bulk of the data that can be found on a Form R. It is the most used and requested file of the State Data Files. It contains information about Facilities, Chemicals, On-site Releases, POTW quantities, Off-site Transfer and Disposal quantities, On-site Energy Recovery Processes, On-site Recycling Processes and Source Reduction and Recycling Activities.

Each record in this file contains data from one chemical report (Form R or Form A Certification Statement) that was submitted by a facility. Thus, this file will contain records for all chemicals that were reported to TRI from a specific state and reporting year.

Specific Contents: This file contains data from the following parts and sections of the Form R and Form A (Certification Statement)

Part	Section	Description
I	1	Reporting Year
I	2	Trade Secret Data
I	3	Form Certification Data

1.2 Detailed Description: File Type 2A

The “Type 2A” file contains 3 general data sections. First it contains almost all of the Facility Identification data that can be found in Part I of a Form R or the Form A Certification Statement. Second it contains the Chemical Identification data from Part II, section 1 of the Form R or Form A Certification Statement. Third, it contains all of the data from Part II, Section 8 of the form R. This is the “Source Reduction and Recycling Activities” data .

Mandated by section 6607 of the Pollution Prevention Act of 1990 (PPA), the “Source Reduction and Recycling Activities” section (Part II, Section 8) of the Form R solicits Facilities to provide information about source reduction activities and quantities of the EPCRA 313 chemicals managed as waste. Section 8 data gives an overall picture of On-site and Off-site releases and waste management as well as source reduction.

The Type 2A file primarily contains data from Part II, Section 7A of the Form R, “On-site Waste Treatment Methods and Efficiency. In addition, this file contains most of the Facility identification information from Part I of the Form R (and Form A) and the Chemical Identification data from Part II, section 1.

1.4 Detailed Description: File Type 3A

File Type 3A focuses on off-site transfers. Like the other state data files, it lists the basic Facility and Chemical identification information from Part I and Part II, section 1. Then, it lists the off-site location that a chemical has been transferred to and the methods and quantities of treatment or disposal.

1.5 Detailed Description: File Type 3B

File type 3B contains information about chemical transfers to (Publicly Owned Treatment Works) POTWs. Like all the state data files, this file contains general facility and chemical identification data. In addition, it contains the total quantity of the chemical that was transferred to all POTWs. And, it lists the names and locations of the first 2 POTWS that the facility sent

the chemical to. The POTW data used for this file is from section 6.1 of the Form R. In section 6.1, the facility is asked to provide the total amount of the chemical transferred to all POTWs and the names and locations of those POTWs. The Form R does not ask the facilities to provide the specific amounts of the chemical that were transferred to each POTW. So, if there's more than one POTW listed, there is no way to differentiate specifically how much of the chemical was transferred to each POTW site.

I	1	Reporting Year
I	4	Facility Identification Information
I	5	Parent Company Information
I	1	Chemical Identification Data
II	6.1.A.1	Total Transfers (to POTWs)
II	6.1.A.2	Basis of Estimate
II	6.1.B	POTW Name and Address

1.6 Detailed Description: File Type 4

File Type 4 contains the basic Facility identification information for all Facilities, in a specific state, that have ever reported to TRI. The file lists the last reporting year the Facility submitted an active and valid form to the TRI program. Everything from Part I of the Form R or the Form A certification statement (except section 2) is listed in this file.

Most of the data in this file is a “reconciliation” of all the data the TRI program has collected from a facility over the course of its participation in the TRI program. Most facilities have sent in several chemical reports (form Rs and As) each year, for a number of years. When the data is collected at the TRI Data Processing Center, differences from form to form or year to year are identified, researched and reconciled. The result is a database of facility identification information that is consistent and up to date.

Some of the data that appears in the file is not a result of facility reconciliation. The “Title of the Certifying Official”, “Certifying Official’s Name”, “Entire Facility Ind”, “Partial_Facility_Ind”, “Federal Facility Ind”, “GOCO Facility Ind” and the SIC codes are all taken from the last active and valid form the facility submitted.

2.0 Noted Changes from the Previous Year's (RY 2001) State Data Files

There is only one change that occurred in the State Data File record layouts in RY 2002. It is the result of the deactivation of one M code in Section 6.2 of the Form R and the introduction of three new and more specific M codes to replace it. The only file affected by this is file Type 1.

2.1 Three new M Code fields added to File Type 1 (M63, M64 and M65)

Section 6.2 of the Form R allows facilities to enter data representing transfers to other (non-POTW) off-site locations. In this section, M codes are used in subsection C to represent the type of off-site transfer.

In past years, the disposal code M72 represented "Landfill/Disposal Surface Impoundment". In reporting year 2002, M72 was retired (not to be used again) and replaced with three new M codes that break down this type of disposal into more detail. The three new M codes that were introduced for this purpose are M63 (Surface Impoundment), M64 (Other Landfills) and M65 (RCRA Subtitle C Landfills).

As a result of the introduction of these new M codes, three new fields were added to the file Type 1 record. Those fields are as follows:

Field Num.	Field Name
168	Surface Impoundment (M63)
169	Other Landfills (M64)
170	RCRA Subtitle C Landfills (M65)

The field representing M72 (field number 167) will still exist in file Type 1 in order to represent off-site disposals in reporting years prior to RY 2002. The new fields will follow directly after M72. The same fields that followed M72 in last year's version of the State Data files will follow the three new fields in the same order as they previously appeared.

The new fields added to file Type 1 can easily be identified in section 3.1. Each appears with a gray background like this... gray background. See page 52 for the definitions and placement of the three new fields.

A few of the fields that serve as summations have also changed. Field number 176, "TOTAL TRANSFERRED OFF-SITE TO DISPOSAL", is the summation of off-site disposal codes. Because of new M code fields, the equation (containing field numbers) that calculates this total has changed. The new equation is highlighted in gray in the Type 1 record layout. See page 54.

Field number 191, “TOTAL TRANSFERRED OFF-SITE FOR FURTHER WASTE MANAGEMENT” is the summation of off-site transfer codes. Because of the shift caused by the new fields, the equation listing the fields that add up to this total has changed. The new equation is highlighted in gray in the Type 1 record layout. See page 57.

Finally, field number 195, “Other on-site Waste Management”, is the summation of On-site Management Quantities. The equation listing the fields that add up to this total has also changed because of the addition of the new M code fields. The new equation is highlighted in gray in the Type 1 record layout. See page 57.

2.2 Three new M Code fields added to File Type 3a (M63, M64 and M65)

Similar to File 1, the three new M-codes (M63, M64 and M65) were also added to File 3a. The new codes were again added after the M72 fields. See fields numbered 84 through 95 for the new M-codes. These fields appear with a gray background.

As was mentioned in section 2.1, M72 has been retired as a valid M-code. However, its associated fields will still remain in this file to facilitate the displaying of data from reporting years before 2002.

The calculation of the “TOTAL AMOUNT TRANSFERRED OFF-SITE FOR DISPOSAL” contains the new M-Codes. See field 116 of File 3a for the new equation. In addition, the inclusive of the new data fields have caused all fields that follow them to be renumbered. Hence, the equations in the following fields contain new reference numbers to their addends:

TOTAL AMOUNT TRANSFERRED OFF-SITE FOR TREATMENT (field 141)
TOTAL AMOUNT TRANSFERRED OFF-SITE FOR ENERGY RECOVERY (field 150)
TOTAL AMOUNT TRANSFERRED OFF-SITE FOR RECYCLING (field 171)

Their renumbered column references also appear in a gray background.
