

CSN & IMPROVE Mega PE Program Overview & Update

Jenia McBrian Tufts

National Ambient Air Monitoring Conference
August 2016

Overview

- Program Background
- What PE's are and why they are useful
- Participating CSN & IMPROVE Laboratories
- PM_{2.5} Round Robin
- Referee laboratories and how qualified
- PE Characterization Plan
- Mega PE Sampling Matrix
- Updated data analysis methods
- TSA Overview
- Status

Mega PE Program Overview & History

- **OAQPS Responsible for CSN & IMPROVE QA Oversight**
 - QAPPs, SOPs, Data Review, Network DQO's
- **ORIA QA Support for OAQPS (2000-2015)**
 - Mega PE, Laboratory TSA's, Special Studies
- **ORIA Functions Transition to OAQPS 2015**
 - Equipment and instrumentation transferred to OAQPS
 - Rebuilding program

What is the Mega PE Program?

- **Purpose**
 - Evaluate total network laboratory performance across the CSN and IMPROVE Networks
 - Quantitative and qualitative evaluation tools
 - Special studies to identify sources of error
- **Annual PE Audit Samples**
- **Biennial Technical and Quality Systems Audits**
 - Network Laboratories
 - Referee Laboratories
- **Includes Biannual Round Robin (PM_{2.5} mass)**

Transition to OAQPS

- **Planning**

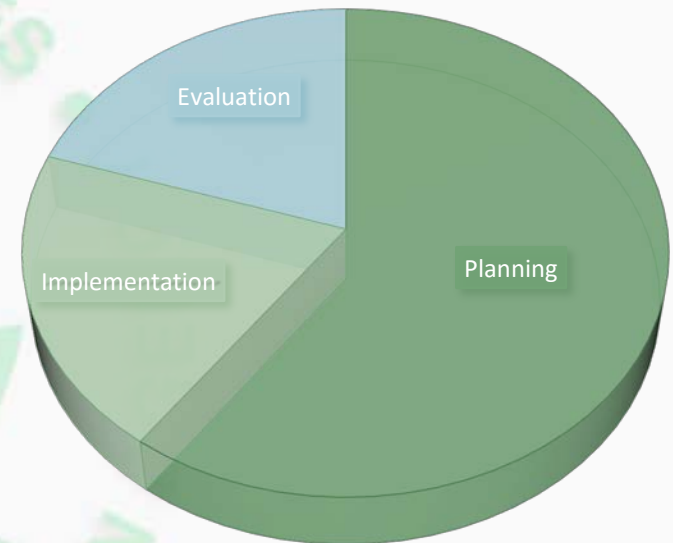

- Development of PE sampling design, generation of appropriate data quality indicators, selection and challenge of referee laboratories, establish analytical measurement uncertainty, statistical analysis methods, development of standard operating procedures, refurbish and calibrate sampling equipment

- **Implementation**

- Hope to collect first samples for characterization by late 2016

- **Evaluation**

- Use of review, audit and statistical assessment tools to assess laboratory performance
 - Comparison of laboratory results to assigned reference values using z-scores

Performance Evaluation (PE)

- A type of audit in which the quantitative data generated in a measurement system are obtained independently and compared with a standard reference to evaluate the proficiency of an analyst or a laboratory.
 - Samples submitted in support of EPA programs where the analyte concentration is known to OAQPS, but not to the analyst or Network lab

Performance Evaluation (PE)

- Allows interlaboratory data comparisons.
 - Can identify individual laboratory bias relative to other laboratories
- Provides a level of confidence that laboratories are operating within an acceptable level of data quality so data users can make decisions with acceptable levels of certainty.
- Helps verify the precision and bias estimates performed by monitoring organizations.
- Identifies where improvements (technology/training) are needed.
- Assures the public of non-biased assessments of data quality.
- Provides a quantitative mechanism to defend the quality of data.
- Provides information to network laboratories on how they compare with other network labs, in relation to the acceptance limits, and to assist in corrective actions and/or data improvements.

Types of PE Samples for Mega PE

- PM_{2.5} Mass Analysis on 47 mm and 25 mm Teflon[®] filter samples
- Ion Chromatography (IC) Analysis on 47 mm Nylon[®] filter samples
- Carbon by Thermal-Optical Reflectance (TOR) Analysis on 47 mm quartz filter samples
- Elemental analysis by X-Ray Fluorescence (XRF) on 47 mm and 25 mm Teflon[®] filter samples

Round Robin (PM_{2.5} Mass)

- OAQPS distributes clean Teflon filters to each Network laboratory for tare weights
 - Filters returned to OAQPS for tare weights
- OAQPS collects PM_{2.5} onto tared filters
 - Final weights obtained by OAQPS
 - Precision between collocated samples determined
- Samples shipped cool by express mail to each participating lab for final weights
 - PM_{2.5} mass results compared with OAQPS weights
 - Interlaboratory results also compared

$$Final (\mu g) - Tare (\mu g) = PM_{2.5} Mass (\mu g)$$

Mega PE Participating Laboratories

| Analytical Laboratories | Network | Analysis and Filter Types | | | | |
|-------------------------|---------------|---------------------------|------------------------|-----------------|------------------------|--------------|
| | | OC/EC | Cations & Anions by IC | Elements by XRF | PM _{2.5} Mass | |
| | | Quartz (47 mm) | Nylon (47 mm) | PTFE (47 mm) | PTFE (25 mm) | PTFE (47 mm) |

Mega PE Referee Laboratories

| EPA Laboratory | Analysis Type | Anticipated Sample Volume | | | | | |
|----------------|------------------------|---------------------------|----------------|------|------|------|-----|
| | | Characterization Study | Annual Mega PE | | | | |
| | | 2016 | 2017 | 2018 | 2019 | 2020 | |
| ORD NERL | IC Cations & Anions | 32 | 32 | 32 | 32 | 32 | 32 |
| | PM _{2.5} Mass | 32 | 64 | 64 | 64 | 64 | 64 |
| ORD NRMRL | OC/EC | 16 | 16 | 16 | 16 | 16 | 16 |
| | ED-XRF Elements | 16 | 16 | 16 | 16 | 16 | 16 |
| Totals | | 96 | 128 | 128 | 128 | 128 | 128 |

Referee Laboratory Qualification

All referee laboratories will be qualified with NIST standard reference materials (SRMs) or NIST traceable standards:

- NIST SRM filters loaded with ambient PM_{2.5} with certified and reference values for selected elements will be used to qualify the XRF (Cooper).
- NIST SRM filters loaded with urban PM_{2.5} dust with reference values for total carbon (TC) by the IMPROVE method will be used to qualify the EPA NRMRL laboratory.
- NIST SRMs for anions and cations are not available, so custom NIST traceable analytical standards will be used to qualify the NERL IC lab.
- NIST traceable gravimetric PE filter samples are not available, therefore the microbalance used for gravimetric analysis will be calibrated with NIST traceable standards, and the calibration will be checked by OEM calibration check weights.

PE Sampling Method Characterization

- $PM_{2.5}$ mass initially
 - Evaluate precision between 4 collocated samplers (< 10% CV)
- Speciation after samplers check out
 - Submit for referee analyses
 - Confirm precision in limits
 - Estimate concentrations as $f(t)$
- Estimate sampling and analytical uncertainties
 - Will vary by sampling event
 - $f(t)$: less sample, higher uncertainties
- Generate and Characterize PE Samples

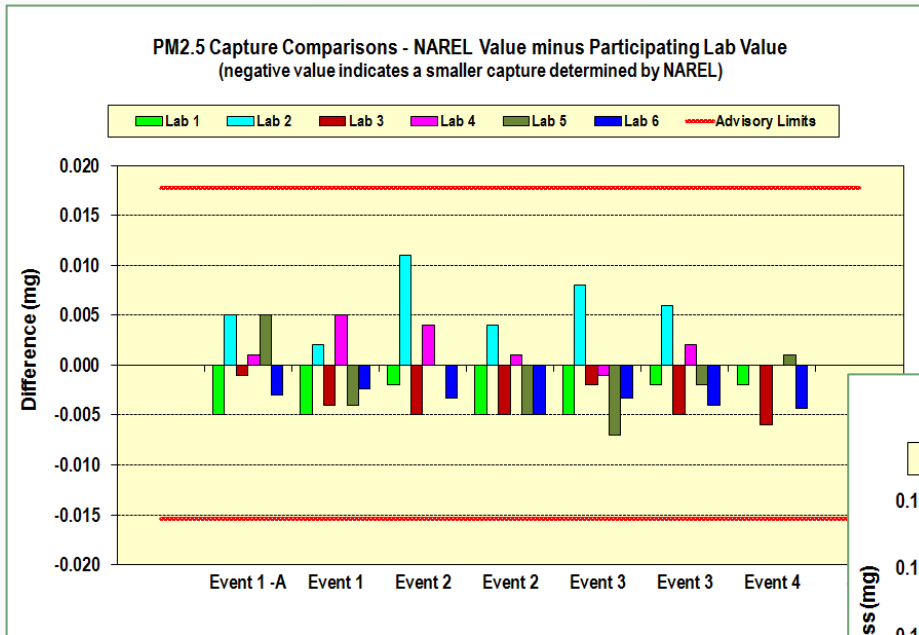

PE Sampling Matrix

| Sampling Event ^a | Filter Type | # Loaded PE's | Disposition | | | | | | Analyses Type | | | |
|-----------------------------|--------------|---------------|-------------|-----|------------------|-----|--------|-----|---------------|----|-----|------|
| | | | Labs | | REF ^b | | Spares | | OC/EC | IC | XRF | Grav |
| | | | PE | Blk | PE | Blk | PE | Blk | | | | |
| 1 | 47 mm Quartz | 32 | 12 | 12 | 8 | 8 | 12 | 4 | ✓ | | | |
| 2 | 47 mm Teflon | 32 | 4 | 4 | 8 | 8 | 4 | 4 | | ✓ | | |
| | 25 mm Teflon | | 4 | 4 | 4 | 4 | 8 | 4 | | | | ✓ |
| 3 | 47 mm Nylon | 32 | 20 | 20 | 8 | 8 | 4 | 4 | | ✓ | | |
| 4 | 47 mm Teflon | 32 | 20 | 20 | 8 | 8 | 4 | 4 | | | ✓ | |
| 5 | 47 mm Teflon | 32 | 16 | 16 | 8 | 8 | 8 | 4 | | | | ✓ |
| Totals | | | 76 | 76 | 44 | 44 | 40 | 24 | | | | |

Mega PE Output - Historical

- Interlaboratory Gravimetric Data from Mega PE #9 (2014)

- Historical advisory limits derived from historical interlaboratory standard deviations of PE measurements
 - Not reference values
 - $LL = X - 0.015$ $UL = X + 0.018$

Mega PE Output - Updated

- Reference values derived from analysis of multiple filter samples from each sampling event
- Z-scores used to evaluate participant laboratory results against reference values:

$$|z| = \left| \frac{x_{lab} - \bar{X}_{ref}}{\sigma_{ref}} \right|$$

| | |
|---------------|-----------------------|
| $ z \leq 2$ | Satisfactory |
| $2 < z < 3$ | Questionable |
| $ z \geq 3$ | Unsatisfactory |

| Sampling Event | Sampling Duration (hr) | Reference Average mg | σ | n | Advisory Limits | |
|----------------|------------------------|----------------------|----------|----|-----------------|-------|
| | | | | | LL | UL |

| $ z \geq 3$ | Unsatisfactory |

8/10/2016

Technical Systems Audit (TSA)

- What is it?
 - Thorough, systematic, on-site, qualitative audit of facilities, equipment, personnel, training, procedures, record keeping, data validation, chain of custody, data management, and reporting aspects of a system
- Includes Reviews of..
 - QAPP and SOPs
 - To ensure both are followed or deviations documented
 - Training Records; Chain-of-Custody; Documentation (calibrations..)
 - May Include a PE Sample for analysis
- Checklist provided prior to audit so lab is prepared
 - Not meant to be a surprise

Technical Systems Audit (TSA)

Pre-Audit Activities

Develop & Coordinate
Audit Schedules

Prepare and Disseminate
Audit Checklist

Review Support
Materials
(QAPP, SOPs)

Prepare/Acquire
PE Samples

Audit Activities

Interview Key Personnel

Provide PE Sample(s) for
Analysis

Visit Laboratory, Witness
Operations and Review
Records

Review Sample Receiving
and Custody

Establish Audit Trail of Randomly Selected Data from
Receipt through Analysis and Data Review

Meet with Key Personnel and QA Officer to Discuss
Audit Findings

Post-Audit Activities

Prepare Written Report Outlining Audit Results, Summarizing Findings and Corrective
Actions for Overall Operations; Data Audit; Laboratory Operations; PE Results

Follow up to Ensure Corrective
Actions Have Been Addressed!

Network Lab Locations

To Do

- Measurement uncertainty (sampling + analysis)
- ORD Laboratory setup, calibration
- Referee laboratory qualifications
- Revise CSN & IMPROVE QAPPs
- Program SOPs
 - Sample collection, analytical methods, data analysis and interpretation, Report output, LIMS, & TSAs.
- Biggest hang-up currently is sampler status
