

# EPA's Lead and Copper Rule Proposal

EPA is proposing the first major overhaul of the Lead and Copper Rule (LCR) since 1991

EPA's proposal takes a proactive and holistic approach to improving the current rule—from testing to treatment to telling the public about the levels and risks of lead in drinking water.

By investing in thoughtful, preventative actions now, we can reduce our risks and better protect our families and our future.

EPA's proposed rule includes focused efforts to provide communities with the tools they need to help protect children from lead exposure where they live, learn and play.

#### The proposal focuses on six key areas:

**Identifying the most impacted areas** by requiring water systems to prepare and update a publicly-available inventory of lead service lines and requiring water systems to "find-and-fix" sources of lead when a sample in a home exceeds 15 parts per billion (ppb).

**Strengthening treatment requirements** by requiring corrosion control treatment based on tap sampling results and establishing a new trigger level of 10 ppb.

**Replacing lead service lines** by requiring water systems to replace the water system-owned portion of an LSL when a customer chooses to replace their portion of the line. Additionally, depending on their level above the trigger level, systems would be required **to** take LSL replacement actions.

**Increasing drinking water sampling reliability** by requiring water systems to follow new, improved sampling procedures and adjust sampling sites to better target locations with higher lead levels.

**Improving risk communication to customers** by requiring water systems to notify customers within 24 hours if a sample collected in their home is above 15 ppb. Water systems will also be required to conduct regular outreach to homeowners with LSLs.

Better protecting children in schools and child care facilities by requiring water systems to take drinking water samples from the schools and child care facilities served by the system.

#### **Funding and Financing Lead Service Line Replacement**

EPA and HUD encourage states and cities to leverage federal resources to support local lead service line replacement projects:

- The Drinking Water State Revolving Loan Fund
- EPA's Water Infrastructure Improvements for the Nation Act grant programs
- EPA's Water Infrastructure Finance and Innovation Act financing program
- HUD's Community Development Block Grants

### **Taking Proactive Actions to Prevent Lead Exposure**

The proposed LCR maintains the current Maximum Contaminant Level Goal (MCLG) of zero and the Action Level of 15 ppb. The proposed rule will require a more comprehensive response at the action level, and introduces a trigger level of 10 ppb that requires more proactive planning in communities with lead service lines.

## We want to hear from you

Please send your comments to EPA through the public docket, Docket ID No. EPA-HQ-OW-2017-0300, at http://www.regulations.gov
