of Ypsilanti, County of Washtenaw, State of )  
Michigan. )

SIP No. 5-1983

STIPULATION FOR ENTRY OF CONSENT ORDER  
AND  
FINAL ORDER

This proceeding resulted from allegations by the staff of the Air Quality Division of the Department of Natural Resources (hereinafter referred to as the "Staff"). The Staff alleges that General Motors Corporation, GM Assembly, a Delaware corporation (hereinafter referred to as the "Company"), located at 2625 Tyler Road, City of Ypsilanti, County of Washtenaw, State of Michigan, is required to comply with the allowable limits as established by Administrative Code 1980 AACRS, R 336.1610. The Company and the Staff agree to the termination of this proceeding by entry of a Final Order by consent.

The Company and the Staff agree as follows:

1. The Company admits that the Chief of the Air Quality Division of the Department of Natural Resources is authorized by resolution of the Air Pollution Control Commission (hereinafter "Commission") adopted June 28, 1977, as agent of the Commission to enter into this Final Order by consent.

2. The Company stipulates that the Chief of the Air Quality Division of the Department of Natural Resources is charged with the investigation and enforcement of all orders, regulations, rules, standards and statutes of the State of Michigan concerning the emission and control of air contaminants.

3. The Company stipulates that the termination of this matter by a Final Order to be entered as a Consent Order is proper and acceptable.

4. The Company and the Staff agree that this Consent Order and Final Order shall be submitted to the United States Environmental Protection Agency as part of the Michigan State Implementation Plan (SIP) revisions in accordance with Part D, Section 171, et seq., of the federal Clean Air Act, as amended in 1977.

5. The Company and the Staff agree that the signing of this Stipulation is for settlement purposes only and does not constitute an admission by the Company that the law has been violated. The Company shall achieve compliance with the aforementioned regulations in accordance with the following schedule:

A. TOPCOAT OPERATIONS

- (1) Until December 31, 1984, volatile organic compound emissions from topcoat coating operations shall not exceed 48.1 pounds per gallon of applied coating solids.
- (2) After December 31, 1984, and until December 31, 1987, volatile organic compound emissions from topcoat coating operations shall not exceed 33.1 pounds per gallon of applied coating solids.
- (3) By April 1, 1987, the Company shall submit to Staff plans and specifications and, if necessary, an application for an installation permit describing the air pollution control device(s) and/or other equipment to be used to control and/or limit the volatile organic compound emissions from topcoat coating operations to not more than 14.9 pounds per gallon of applied coating solids.
- (4) By July 1, 1987, the Company shall submit to the Staff evidence to substantiate that the required air pollution control device(s) and/or other equipment to be used to control and/or limit the volatile organic compound emissions from topcoat coating operations to not more than 14.9 pounds per

gallon of applied coating solids have been placed on order with the manufacturer.

- (5) By October 1, 1987, and after receiving an installation permit, if necessary, the Company shall begin on-site installation of said air pollution control device(s) and/or other equipment used to control and/or limit the volatile organic compound emissions from topcoat coating operations to not more than 14.9 pounds per gallon of applied coating solids and notify the Staff in writing that this installation has begun.
- (6) After December 31, 1987, volatile organic compound emissions from topcoat coating operations shall not exceed 14.9 pounds per gallon of applied coating solids.

B. FINAL REPAIR OPERATIONS

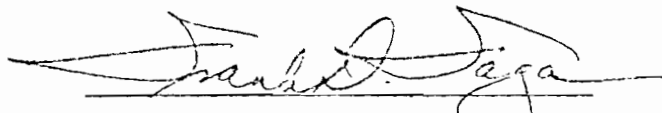

- (1) Until December 31, 1987, volatile organic compound emissions from final repair coating operations shall not exceed 135 pounds per gallon of applied coating solids.
- (2) By July 1, 1987, the Company shall submit to Staff plans and specifications and, if necessary, an application for an installation permit describing the air pollution control device(s) and/or other equipment to be used to control and/or limit the volatile organic compound emissions from final repair coating operations to not more than 34.3 pounds per gallon of applied coating solids.
- (3) After December 31, 1987, volatile organic compound emissions from final repair coating operations shall not exceed 34.3 pounds per gallon of applied coating solids.

6. Compliance with the limits specified in paragraph 5, above, shall be determined by using reference test methods specified in the rules of, or acceptable to, the Commission.

7. The Staff and the Company do not regard this abatement program as a variance subject to the 12-month limitation specified in Section 22 of the Air Pollution Act, being MCLA 336.32. Approval of this abatement program is not a major state action for purposes of further environmental review pursuant to Executive Order 1974-4.

8. Staff and the Company both acknowledge that a public hearing on this abatement program was held on January 18 and February 15, 1983. Both Staff and the Company consent to enforcement of this Stipulation and Final Order in the same manner and by the same procedures for all final orders entered pursuant to Section 16 of 1972 PA 257, MCLA 336.26, including enforcement pursuant to 1970 PA 127, MCLA 691.1201 et. seq.; MSA 14.528(201) et. seq.
