

CLIMATE RESILIENCY AND SUPERFUND SITE REUSE

Understanding and addressing climate change is critical to EPA's mission of protecting human health and the environment. This webinar will discuss how EPA is addressing the vulnerabilities of Superfund site cleanups and reuse to climate change and extreme weather events. Participants will learn about EPA tools and resources available to help communities adapt to climate change. This event will also feature the Student Conservation Association, an organization with local programs to protect and restore national parks, marine sanctuaries, cultural landmarks and community green spaces in all 50 states, to highlight opportunities to build ecological, social, and economic resilience.

SPEAKERS:

Alexis Rourk Reyes, EPA Superfund Redevelopment Program
Chelsea Sebetich, EPA Superfund Redevelopment Program
Carlos Pachon, EPA Office of Superfund Remediation and Technology Innovation
Kelly Runzel, Student Conservation Association
