## Subject: Per- and Polyfluoroalkyl Substances Sampling of Joint Base Pearl Harbor-Hickam Water System Sources

Dear Rear Admirals Barnett and Rear Admiral Kilian:

Given recent and past aqueous film forming foam releases, and out of an abundance of caution, the U.S. Environmental Protection Agency (EPA) and Hawai'i Department of Health (DOH) request that the U.S. Department of the Navy (Navy) conduct per- and polyfluoroalkyl substances (PFAS) sampling and testing of all sources, active and inactive, that provide or provided water to the Joint Base Pearl Harbor-Hickam (JBPHH) Water System.

While we understand that the Waiawa Shaft is the only active source that is currently being used to supply water to the JBPHH Water System, both the Red Hill Shaft and Navy 'Aiea-Hālawa Shaft are approved drinking water sources for the JBPHH Water System and have been used to supply water in the past.

The Navy should conduct the PFAS sampling and testing within 30 calendar days of receiving this letter. EPA approved drinking water laboratory methods 537.1 and 533 should be utilized for PFAS analyses as they reflect multi-lab validation and support EPA's data quality objectives for monitoring of PFAS compounds in drinking water. The Navy should submit tabulated results and laboratory reports to DOH, whether or not validated, within 7 calendar days of receiving analytical results from the lab. In addition, please provide a plan for obtaining follow-up confirmatory samples with replicates if detections are found. The DOH may conduct split samples for analysis and/or provide oversight during the sample collection.

Rear Admiral Stephen D. Barnett and Rear Admiral Jeffrey J. Kilian January 31, 2023 Page 2 of 2

If you have any questions, please contact Ms. Corine Li, Manager, EPA Drinking Water Program Manager at (415) 972-3560 or Mr. Gaudencio C. Lopez, P.E., DOH Safe Drinking Water Branch Chief at (808) 586-4258.

Sincerely,

Tomás Torres, Director Water Division U.S. EPA Region 9

Kathleen Ho
