

— Pre-Dredging Period (2004-2008)
 — Post-Dredging Period (2016-2021)

Notes

- Distance between points on x-axis is not to scale.
- 95% confidence limits on the mean are calculated using a bias-corrected and accelerated (BCA) bootstrap method.
- Lines connecting points are to aid visual interpretation of data and does not represent interpolation of data between data points.

Water Column

- Due to differences in sample collection frequency, pre- and post-dredging data included in this figure are restricted to routine samples collected in the months of May to November.

Sediment

- The results are shown Recoverable-Sediment-Area (RSA)-weighted average concentrations for data from 2016, 2017 and 2021. See Appendix 2 for additional details.

Fish Tissue

- PCB concentrations are expressed as Total PCB lipid-normalized homologue equivalent values (TPCB_{HE-lipid}). See Appendix 3 for additional details.

Fish Tissue

Water Column, Sediment and Fish Tissue Concentrations in the Pre-Dredging and Post-Dredging Periods
